2. Adoption by the legislature of the county unit plan for furnishing powder and land clearing equipment to settlers.

3. The adoption by the people of the state of a constitutional amendment providing for the classification of property for purposes of taxation, as now in operation in Minnesota.

4. An educational campaign urging the formation of wood lots or small forested areas by farmers; the opening of large tracts of logged off land now in private ownership for settlement at the lowest prices and reasonable terms.

In carrying out this plan a tentative draft of the so-called "powder bill" has been prepared, and will be submitted to the legislature next winter. This provides for the creation of agricultural development districts, the limits of the district to be co-extensive with the limits of the counties; these districts to acquire land by purchase; to manufacture or purchase powder, caps and fuses and land clearing equipment; to sell of same to any owner; to borrow money and issue bonds not to exceed $250,000 outstanding at any one time; to raise revenue by taxation not exceeding one-fourth for improvement at not to exceed $5 per acre and to enter into contract to sell back to the vendor such land on long time payments; the price to be equal to the purchase price, plus the cost of improvements, etc.

Washington, owing to the extensive lumber operations, is developing large areas of stump land, most of which makes fine agricultural land when once cleared. The lumbermen have been co-operating actively with state authorities and commercial bodies in placing these lands upon the market at such low prices with long time payments as to interest homeseekers.

American Forest Trees

By the late Henry H. Gibson
Edited by Hu Maxwell, Wood Utilization Expert

The book is beautifully printed, and is handsomely bound in half leather, dark green roan back and corners, with basket cloth sides, silk head-bands, gold stamping on the back, and gilt top.

The work is illustrated in sepia with more than 100 full-page halftones from photographs covering all the chief commercial varieties of virgin forest timber growing in the United States, and also with numerous engravings from drawings showing leaf and flower forms, etc.

The price of the work is $6.00, delivered by express or mail.

Paepcke-Leight Lbr. Co.,
Chicago,
Ill.

Gentlemen:-

We are using your Red Gum lumber in the manufacture of our high class interfor trim and general planing mill work.

This gum is giving excellent satisfaction, being highly graded, soft texture, good widths, and long lengths, also dry, straignt and flat.

Respectfully,
Harris, McHenry & Baker Co.

Dict.
REN/MG.

Of course it is true that

Red Gum

is America's finest cabinet wood—but

Just as a poor cook will spoil the choicest viands while the experienced chef will turn them into prized delicacies, so it is true that

The inherently superior qualities of Red Gum can be brought out only by proper handling

When you buy this wood, as when you buy a new machine, you want to feel that you have reason for believing it will be just as represented.

We claim genuine superiority for our Gum. The proof that you can have confidence in this claim is shown by the letter reproduced herewith.

Your interests demand that you remember this proof of our ability to preserve the wonderful qualities of the wood when you again want RED GUM.

G-E Motor Driven 10-Ft. Band Head Saw, Booth-Kelly Lumber Company

Electric Power Through G-E Motors Used at Booth-Kelly Mill

The splendidly modern saw mill of the Booth-Kelly Lumber Company, at Springfield, Oregon, is equipped with G-E motors and controllers.

Every application of this electrical equipment shows its wonderful flexibility and economy.

From log hoist and carriage through head saw, over live rolls, through edger, combination matcher and resaw, to gang transfer crane and automatic trimmer the timber is handled almost entirely by power from G-E motors. Even the special exhauster for planing mill refuse is driven by a G-E motor.

The results following the adoption of G-E motors in the Stimson and Weyerhaeuser Mills, after the use of these motors in many of the most representative lumber mills of this country, indicate a quality worthy of your serious consideration when next in the market for electrical apparatus.

Our engineers will be pleased to study your local conditions and lay out a flexible and economical motor drive for your mill.

A New Book

LOGGING

The Principles and General Methods of Operation in the United States

By Ralph Clement Bryant, F.E., M.A., Manufacturers' Association Professor of Lumbering, Yale University.

8vo, xviii 590 pages, 133 figures.

Cloth, $3.50 Net

The information which is contained in this book can be applied by the lumberman in his daily work.

The chief facilities and methods for the movement of timber from the stump to the manufacturing plant, especially logging railroads, are discussed at length.

Greatest emphasis has been laid on features about which there is not much written material available.

SCRIBNER'S LOG BOOK

Over 1,500,000 of these books have been sold. It has had a larger sale than any book of its kind. It has a log scale, lumber tables and an abundance of other useful information. Price prepaid 25 cents.

ATKINS

Made of SILVER STEEL—as fine as razor steel. Tempered by gas, in patented ovens—as carefully as clock springs.

SEGMENT GROUND—of even gauge along the entire toothed edge, two to three gauge thinner on back at ends and five to six gauge thinner at center of back. They gradually taper *throughout* the blade from the thickest to the thinnest point.

They Can't Bind
They Can't Stick

Because they cut a kerf so wide that the blade clears itself. They require fewer wedges—hold their edge longer—run easier and cut faster than any Saws in the world.

LIDGERWOOD SKIDDERS

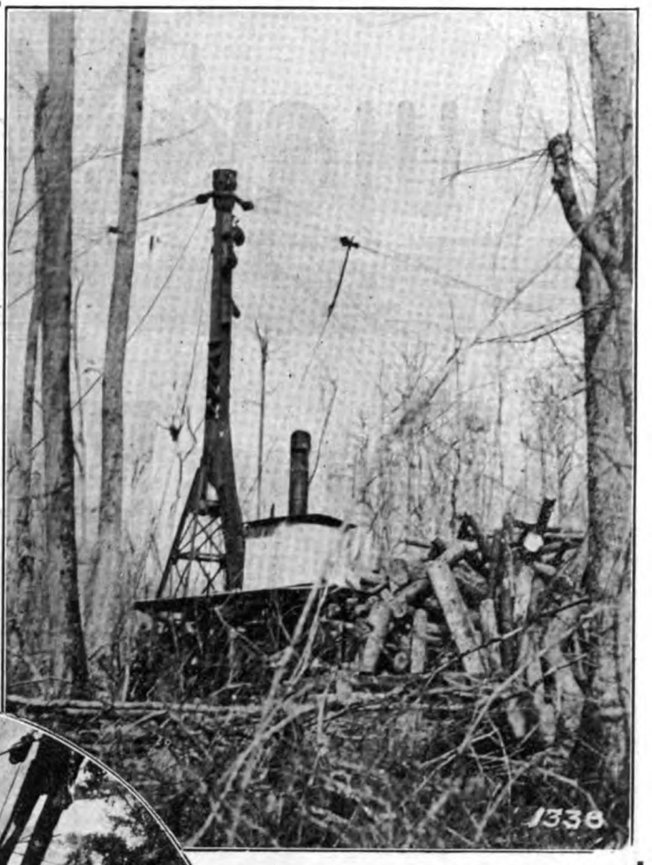
We build Overhead Portable Steel Spar Skidders, Semi-Portable Tree Rig Overhead Skidders, Portable Ground Skidders, and Semi-Portable Tree Rig or High Lead Ground Skidders.

One of these types will meet your requirements whether you have to skid over level ground, up hill, down hill, across canyons, or over intervening ridges.

We will send our expert logging men to look over your timber lands, and advise you what type of machine is best adapted to your work.

We build a machine to meet every condition.

Therefore our recommendation is unbiased, and covers the machines best adapted for your operation.



Portable High Spar Overhead Skidder and Loader

Lidgerwood Portable Ground Skidder and Loader

High Lead-Ground Skidder and Loader

Cost of Logging

We are the originators of steam logging machinery. Our machines have been constantly improved, and new types developed to increase capacities to meet the advancing requirements of lumbermen.

A statement of what logging is costing at any particular operation, without taking into consideration the local conditions, and without considering every element of cost from the felling of the tree to delivery at mill, is worthless.

In deciding the cost of skidding by any type of machine not only should the cost of operating the machine be considered, but the amount of timber that will be skidded at each setting, the railroad construction necessary, and time lost in repairs.

We will send practical logging men to look over your timber lands, and recommend the type machine that will give you lowest logging cost.

Send For Bulletins.

Present Day Competition Demands Improved Manufacturing Methods and Quality Products

Every planing mill endeavoring to profitably market its product is compelled to meet these conditions. Modern equipment is a necessity. When making your installations do not consider only a matcher that will enable you to improve your manufacturing methods the greatest and turn out quality production, but a machine that will stand the strains of the most modern manufacturing methods and give you quality production the greatest length of time. Such a planer makes the best investment and naturally the most profitable equipment.

Our engineers build for the future. Therefore with a Woods 404-B Rapid Feed Matcher in your mill you get quality production under the most efficient manufacturing methods for the greatest length of time.

PICTURED here is one of several very complete and artistic exhibits which the CYPRESS manufacturers are lending to retail lumber dealers to be displayed in the names of the dealers. Twenty-eight retailers have taken advantage of the shows since May of this year and all are loud in their praise of the exhibit and of the results obtained.

These exhibits localize the CYPRESS national advertising, show the goods which so many millions of people have read about and bring the actual orders to the retail dealer making the show. It is advertising which makes a direct appeal to the people and is wholly in the interest of the retail dealer.

Turn over a few pages and see what some of the retailers say about it.

(*Continued on pages 8 and 9*)

HERE'S A DOLLARS AND SENSE PROPOSITION

Giving genuine quality and service to our customers is as much a part of our business as getting orders; indeed, it is perhaps this important feature which brings us so many orders from shrewd lumber yard proprietors who are not willing to run the risk of disappointing their own customers.

We have satisfied and gratified so many dealers throughout America that you owe it to yourself to reap the benefits of our very successful and helpful methods.

We co-operate with our customers to such an extent that they invariably send repeat orders to us.

It costs you no more in the beginning and it's cheaper in the end

Send for our list which quotes prices on all grades of yellow pine lumber DELIVERED to any railroad point.

FROST-JOHNSON LUMBER COMPANY

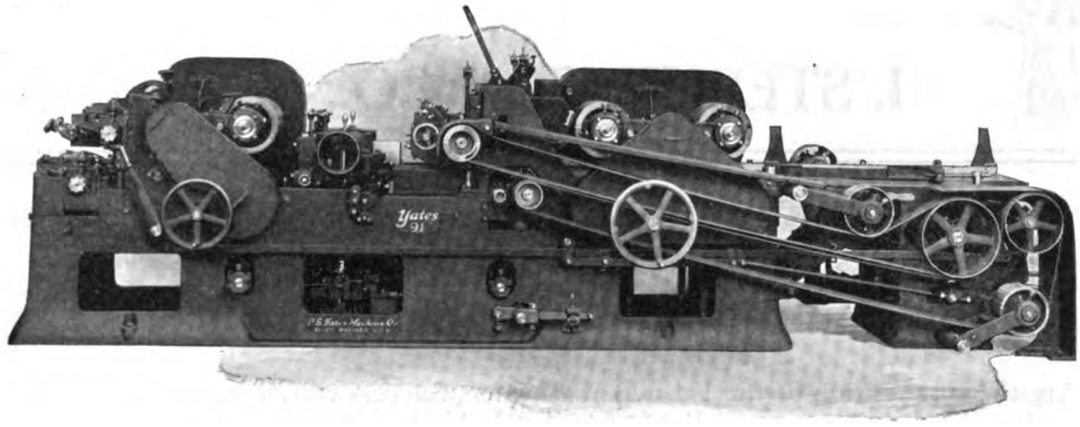
TRADE-MARK

Digitized by Google

Where Big Things Are Done—



There's a Yates (formerly BERLIN) "Ninety-One"

IN the Yellow Pine of Georgia, the Cypress of Louisiana, the White Pine of the North and Northwest—at Bend, Tacoma or Bogalusa or any of the great lumber producing centers where daily output runs into or close to the million mark, one invariably finds the Yates No. 91 Planer and Matcher.

Why? Because companies like these choose equipment solely on the basis of what that equipment will PRODUCE.

The Yates No. 91 Planer and Matcher is the only matcher built whose designers have thoroughly taken into consideration the peculiarities of all the different varieties of woods on which this machine is now operating.

It has the lowest average upkeep cost of any matcher built. Its working parts and their adjustments are without exception the most accessible.

All of which spells the Highest Quality of Output, the Greatest Production, and the Lowest Manufacturing Costs.

We can tell you of No. 91's in your own vicinity. Ask us where you can see one in operation.

THE MILLS OF SERVICE

EVERETT, WASHINGTON

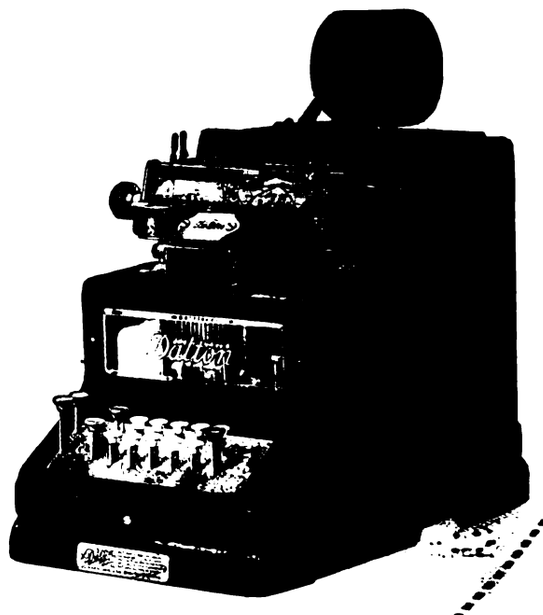
Speed in the Lumber Office

is as essential as speed in the yard or mill—only more so in that office labor costs more to start with and in most offices a whole lot more than it should at the finish. But whatever your objections may have been in the past toward mechanical aid you can't afford now to overlook the

Dalton Adding, Listing and Calculating Machine

In actual practice it has demonstrated its efficiency in the lumber office not only in addition, but in the auditing of invoices requiring multiplication. For example it took an ordinary operator on the Dalton but **67 seconds** to audit the following invoices:

464 pcs. 1x8—16 No. 2 Com. Y. P. S2S		4,949
763 pcs. 1x8—18 No. 2 Com. Y. P. S2S		9,156
134 pcs. 1x8—20 No. 2 Com. Y. P. S2S		1,786
206 pcs. 1x8—24 No. 2 Com. Y. P. S2S		3,296
Weight 2,082 lbs. M.	19.187 ft. @ $14.45 M.	$277.25
39,947 lbs.		
Rate 14.25 cwt.		$ 56.92
Total at destination		$334.17



How Long Would It Take You To Do it?

The Dalton Adding Machine Co.

Norwood, Cincinnati, Ohio

Fill out coupon attached and mail today for further information regarding use of the Dalton in the lumber office.

I should be glad to know more about the DALTON adding machine and welcome some further information on the subject, without obligation to us.

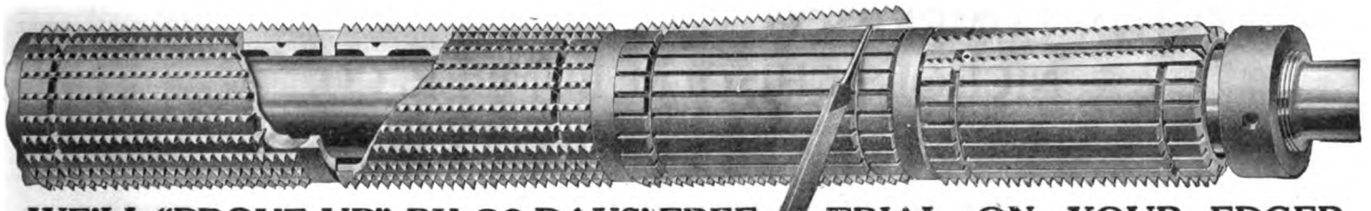
COLEMAN FEED ROLLER
(that never wears out)

What good is *speed* at the expense of *quality?*

With the invention of the shot-gun feed, steam loader, steam nigger and power set works the sawyer got speed without sacrifice of quality. WHAT DID THE EDGERMAN GET? Well, he got *speed.* He *had* to. But just as sure as you're alive a part of the speed which the sawyer has gained is now wasted at the edger by lower percentage of high grade lumber. If his feed rollers are dull the edgerman must help the stock along by hand, and has just time to "grab another board and run 'er through." *Down go his grades*—of course.

It's a rotten job to sharpen old style feed rollers, so most mills run them dull much of the time. We can show you surprising figures on what this means to YOU in dollars. Coleman Feed Rollers (saw tooth or plain bar) are always sharp because they can be resharpened any day AT NOON while in their bearings. Their "sawhook section" makes them *the most* efficient roller. They *do not* mar the lumber and they keep your grades up. They cost about what you pay for ordinary rollers and they last a lifetime.



WE'LL "PROVE UP" BY 30 DAYS' FREE TRIAL ON YOUR EDGER

BIG CHIEF

THE BEST SHINGLES IN THE WORLD

When you order BIG CHIEF brand British Columbia Red Cedar Shingles, you will receive shingles not equaled in quality by any other brand of shingles manufactured anywhere.

BIG CHIEF brand Shingles are DRIED—NOT COOKED—and are otherwise prepared so that when finished, they are as nearly perfect as experience, skill and equipment can make them.

Note the packing and uniform thickness

BIG CHIEF
BRAND
BRITISH COLUMBIA RED CEDAR SHINGLES

SPECIFICATIONS: 16 inches long; 5 butts measure 2 inches and each bundle measures full 10 inches in thickness when dry, and they are 100 per cent vertical grain, 100 per cent clear, 100 per cent heart and 100 per cent covering efficiency. Contain positively no sap; random widths, but no shingle less than 3 inches wide. Smoothly sawn, squarely jointed, and otherwise perfectly manufactured.

Straight cars always enroute to Minnesota Transfer and available for diversion to points taking through rate from there. Mill shipments to any point can be made on 24 hours notice.

He Who Looks Before He Leaps

Here is what some of the retail lumber dealers say about the CYPRESS exhibit which is described on the first page. These letters are samples, as we have not space to print many. Some of the exhibits were made in downtown stores and others were set up in the retail lumber offices and the whole thing handled as a plan to help the retail dealer.

We are willing to help you in the same way, if you will let us do it.

Butler, Ind.

We appreciate the sending of the bungalow nd, from the expressions made by those who aw it, we believe it will help us in our business. We had a lot of boosters for it among the business men and we received a number of inquiries in regard to CYPRESS, which we are taking care of.

(Signed) S. Q. Lamm & Son.

Danville, Va.

Enclosed we are handing you check for $15.00, it being the First Premium on our booth at the fair, and as we secured this on your exhibit we are passing it along to you. This exhibit has created a great deal of interest—in fact, it was one of the features at the fair and will result in increasing business for all of us.

(Signed) Danville Lumber & Manufacturing Co.

(Editor's Note.—We returned the check to these people as it was their exhibit.)

Perry, Iowa.

Well, we have had the bungalow exhibit and were very much pleased with it and the advertising results obtained through its use. It brought to our attention several prospective builders of whom we would not have otherwise heard.

(Signed) C. D. Markres & Company.

Xenia, Ohio.

This is the first opportunity I have had to tell you what a hit the model CYPRESS bungalow made at our Green County Fair. We were told dozens and dozens of times that it was the most interesting exhibit on the Fair Grounds. I feel that the exhibit was the best piece of advertising ever done by the lumbermen in this locality. It was of a character that was of mutual advantage to all of the lumbermen in the country, although it was exhibited under the auspices of McDowell & Torrence Lumber Company. Almost every person who came in to see the exhibit wanted to discuss his own individual building plans and we made up a nice little list of prospective customers.

(Signed) Findley M. Torrence.

Augusta, Ga.

I will not wait until the close of the Fair to express our appreciation and to congratulate you on the exhibit we have, by your assistance, at the Georgia-Carolina Fair. Our exhibit has been the toast of the town. This plan you have adopted of putting CYPRESS before the people is one of the most effective schemes we have ever come in contact with and I am satisfied that the beneficial effects will begin almost immediately.

(Signed) Augusta Lumber Company.

Toledo, Ohio.

We wish to say that we are entirely and thoroughly satisfied with the results obtained through the assistance of this exhibit. We have something in the neighborhood of one hundred and fifteen names which we took during the course of this exhibit, some of which are immediate prospects, while others are in the course of development. We expect to close three jobs immediately.

(Signed) Swan Creek Lumber & Supply Co.

Newton, Iowa.

This was by far the most attractive exhibit on the grounds and was noted and commented upon very favorably by at least fifteen thousand people. Some of these people came back three and four times to study this CYPRESS bungalow. This educational work will mean that it will be easier to sell CYPRESS for the purposes for which it is best adapted.

(Signed) Jasper Lumber Company.

Cleveland, Ohio.

You inquire as to whether we feel that this exhibit was a benefit to us. We say very emphatically that it certainly was. In fact, we do not believe that we could have devoted the same amount of space to any better advantage. By watching the crowds we estimate that ninety per cent. of the people attending came over and examined this bungalow very closely. The comments were all very favorable and enabled us to secure a great many prospects, as well as a few direct orders.

(Signed) The A. Teachout Company.

Yellow Pine, Oak and Gum Lumber

Retailers can get from us Rough Oak Wagon Material for reaches, tongues and general repair work and gum box boards in the same car with Yellow Pine yard stock.

We have three Yellow Pine Mills; one at Pineland, Tex., and two at Diboll, Tex., which manufacture 150,000,000 feet of lumber a year. At Diboll we manufacture hardwood entirely separate from yellow pine; both operations being conducted by competent men. This enables us to furnish mixed cars of pine and hardwood manufactured in the proper way.

SOUTHERN PINE LUMBER COMPANY
TEXARKANA, TEXAS

B-S CYPRESS Co.

In the Heart of The Best Cypress District

THE following from the National Retail Lumber Dealers' Association's declaration of business ethics—

Branding Lumber

Sec. 3. This association heartily endorses and will support the efforts of all associations of lumber manufacturers which are devising ways and means for the branding of the product of their members and thereby assuring, within a reasonable variation, the integrity of the grade, as well as making possible the identification of the stock, with consequent protection to the retail dealer and the consuming public.

Advertising Lumber

Sec. 5. The retail lumber dealers recognize that their interest lies in the sale of lumber and they are directly benefited by the advertising campaigns which are being conducted by the National Lumber Manufacturers' Association, and by the several associations of lumber manufacturers. This association, therefore, most heartily endorses all efforts directed to the promotion of the use of lumber and commends those manufacturers who are aiding such promotion.

ACCOMPLISHMENT

THE STORY OF ACCOMPLISHMENT:

To standardize lumber by making an international reputation for the manufacture of **quality** lumber.

To successfully operate ten great sawmills located in the heart of the finest forests in the South.

To produce the maximum capacity of one million, five hundred thousand feet of **quality** lumber per day.

To market all over the world four hundred and fifty million feet of **quality** lumber per annum.

To deliver to dealers, wholesale buyers and export trade twenty-four thousand, three hundred and sixty cars of **quality** lumber per annum.

To build up and maintain a selling organization of able Salesmen, meeting the lumber trade in all parts of the United States and some foreign countries.

To mass this gigantic organization, the largest lumber manufacturing institution in the world, under one administrative head, directing the growth, development and consummation of its phenomenal success, all in a short twenty-five years—**Is nothing short of a Titan Task.**

Just twenty-five years ago the company started to manufacture lumber in a small way, with three objects in view, namely:

1. The standardization of lumber which meant **quality** lumber.
2. The production of **quality** lumber in sufficient volume from several localities to take care of extensive orders, so that shipments could be made on record time.
3. And last, but most important, to build up an institution so trustworthy as to its method of business conduct as to inspire every dealer or buyer of lumber, or any commercial institution, with absolute confidence, wherever the name of The Long-Bell Lumber Company went forth.

With these three principles in mind, Mr. Long welded together the great interests which have grown from the almost forgotten miniature nucleus in 1891, into not one, but ten enormous sawmill institutions under one head. These ten sawmills, located in the States of Arkansas, Louisiana and Texas, have succeeded in standardizing lumber, placing upon the market **quality** lumber unassailable as to its uniformity and superiority. And today, when the name of The Long-Bell Lumber Company is mentioned, it is understood that the delivery of **quality** lumber will be exactly in accordance with the agreement of time of shipment and quality of the lumber, plus the satisfaction of dealing with an institution that lives up to every contract it makes.

To have accomplished this splendid task is a satisfaction to the management of The Long-Bell Lumber Company's operations, but that satisfaction of accomplishment is only an incentive to further development. An institution founded upon the principles that have made The Long-Bell Lumber Company, world famous in the production of **quality** lumber, is in an enviable position in the lumber markets of this and foreign countries.

The work is just begun. The accomplishment already made demonstrates conclusively that this organization can at all times take care of all orders for long and short leaf yellow pine and oak flooring **quality** lumber, both in this and foreign countries.

As long as the lumber industry of America will supply the trade, so long will The Long-Bell Lumber Company endure and deliver its **quality** lumber to the trade.

There is a salesman in your territory, authorized to quote you the lowest prices we are making on Long and Short Leaf Yellow Pine, Forked Leaf Brand Oak Flooring, Oak lumber, Straight or Mixed car lots, etc.

An inquiry by postal, wire or letter brings a quotation or salesman to you when you want one.

FOR THE SECOND TIME THIS YEAR, and undoubtedly the last, "Our Wide East Windows" look out upon an open court of a western city, the court itself opening to the west; but that does not matter, for it is the exact center of the most important happenings in the lumber world—because it is a station by the wayside on the line of march of the National Lumber Manufacturers' Association's evangelistic tour of the Inland Empire and the Pacific Coast.

If the forty or fifty people who originally promised R. H. Downman that they would make this trip with him had actually made good, it is rather difficult to imagine just what might have happened when we have, in front of us the result of what four men have done.

On many pages elsewhere in this issue we print an epitomized account of this tour of the National Lumber Manufacturers' Association officials, and although it is greatly boiled down and actually epitomized it even then fills nine full pages of type matter.

Up to the time of writing this editorial leader, the trip is finished up to and including the Grays Harbor country, but the "by mail" story is supplemented by telegrams covering Portland and San Francisco, so that we will actually have the entire story in this issue of our publication.

On the face of it, it looks as if the Western Pine Manufacturers' Association and the West Coast Lumbermen's Association are about to increase their appropriation for the support of their associations to such an extent that they can give substantial support to the business of the National Lumber Manufacturers' Association, but there will have to be a considerable adjustment of IDEAS and IDEALS in both of those associations before such a thing will be possible.

We have not the slightest opinion as to what will happen in this regard, but can only hope that the rank and file of these associations have seen the light to such extent that they will be readily willing to levy such assessment for their support as will make them invincible in their local work and also of substantial benefit to the National Lumber Manufacturers' Association.

There appears to be a very decided sentiment in favor of these two associations making their contributions direct to the National Lumber Manufacturers' Association, instead of private individuals making their contributions to the Trade Extension department of that association.

The Western Pine Manufacturers' Association for a long while has been contributing the money as an association which its individual members in the first place subscribed direct.

Lumbermen's Association appointed committees which reported in each case favorably upon increasing the dues per thousand on the production of lumber to such an extent that the National Lumber Manufacturers' Association should receive a cent and a half a thousand on the cut of the members of both of these associations and Charles S. Keith, president of the Southern Pine Association and A. R. Turnbull, president of the North Carolina Pine Association, have pledged themselves to do what they can to increase their appropriations as well.

It has been figured that the amount of increase suggested would give the National Lumber Manufacturers' Association an annual income of $210,000.

It is high time that the associations in the impersonal should be shamed into lifting the burden from the individual few who have given it out of their pockets direct and if this is accomplished it will be directly due to this evangelistic trip of R. H. Downman, Charles S. Keith, A. R. Turnbull and R. B. Goodman.

Mr. Downman's history of the rise and progress of the National Lumber Manufacturers' Association, Mr. Keith's paper on the subject of the proposed new law which is to permit the combination of institutions which manufacture natural resources; and R. B. Goodman's paper on western timber are printed elsewhere in this issue and are deeply worth while in every particular.

We rather fancy that Mr. Downman's very plain statement concerning what the National Lumber Manufacturers' Association has accomplished will set at rest a lot of speculation on this subject which has been buzzing up and down the lumber world for the last three or four months.

A National Lumber Advisory Board.

AT LAST IT HAS BEEN PUBLICLY revealed by W. B. Greeley, assistant forester of the United States—as his personal view at least—that there should be a National Advisory Board or sort of perpetual council to look after the welfare of the lumber trade of the United States and out of which might grow a National Forest Policy; an advisory board to consist of two lumbermen, one from the western side and one from the eastern side of the Rocky Mountains, a member of the Forest Service, a member of the Federal Trade Commission and a member of the Department of Commerce.

And, by the way, we are promised very soon the series of reports on the lumber industry that have been in the making during the last three years and which have been prepared by such experts as W. B. Greeley, addressing himself to a general review of ALL the OTHER reports under the title of "Forest Conservation and the Lumber Industry"; C. Stowell Smith, in a monograph entitled "Timber Ownership and Lumber Production in the Southern Pine Region"; Austin Cary on "Timber Ownership and Lumber Production in the Douglas Fir Region"; David T. Mason, relative to "Timber Ownership and Lumber Production in the Inland Empire"; C. Stowell Smith on "Timber Ownership and Lumber Production in California"; W. B. Greeley, regarding "Public Timber and Its Use"; Ovid M. Butler on "The Distribution of Softwood Lumber in the Middle West"; Howard F. Weiss on "The Utilization of Low Grade Lumber and Mill Waste"; Rolf Thelen on "The Substitution of Other Materials for Wood"; Herbert S. Betts on "The Adaptation of Lumber Manufacture and Grading to the Requirements of Consumers," and by Dr. Edward E. Pratt, chief of the Bureau of Foreign and Domestic Commerce, on "The Exportation of American Lumber."

We have no idea what this investigation has cost the government but it has certainly been a heavy expense; and in this connection we are wondering with a deep and ever present and CONSCIOUS wonderment whether or not it will ultimately be discovered that this painstaking and scientifically wrought result will have been considered worth while!

In contemplating such work as this and the unwholesome and unsavory manner in which the government of the United States serves up its literary dishes there always rises in contemplation that long since famous drawing of W. W. Denslow,—the skull in the center of the table with the forearm bones across the front and the slogan underneath—"What is the use?"

In this statement in the paragraph above there is not the least reflection on the Forest Service nor on any OTHER bureau of the government at Washington, but there is a vast pity that the great reports of the sort which are about to be issued in the interest of a better knowledge of the lumber business in this country are not served up in a palatable way, beautifully illustrated, so they may make attractive reading to the MASSES of the PEOPLE that they are SUPPOSED to reach!

We do not suppose that this protest will help the least little bit in cementing the relations between the LUMBER WORLD REVIEW and the Forest Service, because as usual we probably will be misunderstood, but we DO protest NEVERTHELESS that the simple writing out of a scientific document and then throwing it into type and feeding it out to the public in an unattractive manner is not only a slip-shod way of doing things, which no BUSINESS man would tolerate—and is an EXTREMELY bad use of the public's money. Having seen this wonderful series of reports mentioned above—"in the making"—as it were—having had the privilege of reading some of them in type-written form before they went to the printer, we can say PERSONALLY that we believe it would be a splendid investment for the National Lumber Manufacturers Association, to issue them in a semi de luxe edition so that they would be attractive to the people to whom they are supposed to carry information.

We certainly do approve highly of the campaign for advertising these wonderful reports which seems to be fathered by J. R. Moorhead of the Southwestern Lumbermen's Association and to show our appreciation of these reports even in advance of their coming out in the government form, the LUMBER WORLD REVIEW will be glad to carry a page advertisement of those reports in its columns for three months following their issuance without cost to the Forest Service—IF the Forest Service will write the "copy."

Salvation Is In Co-operation.

THE "PORTLAND OREGONIAN" OF MONDAY, November 20, uttered some sensible sentiments under the above caption.

It is so seldom that a daily paper rises to lumber situations that we reprint herewith the editorial from the "Oregonian" as an evidence that our slogan, "Co-operation and not Competition is the Life of Trade," has become a living, pulsating principle of National Business Life. Herewith the "Oregonian's" editorial statement:

"Adversity is bringing the lumbermen of all sections of the United States together to work for the common interests of their industry. There may appear to be more conflict than community of interest among the lumbermen of Maine, of the middle west, of the yellow pine belt of the south, of the cypress belt of Florida, of the white pine belt of the Rocky mountains and of the fir belt of the Pacific coast. In fact, they have a common interest in promoting the increased use of lumber and in the elimination of waste. They will all benefit more by uniting to encourage the use of lumber in general and to prevent the waste of any forest product than they would if each section were to work independently for the use of its own particular class of lumber and to save its by-products. Having in concert established a demand for lumber, they can then extol the merits of each class of lumber for any particular use.

"This is the purpose which prompted a party of eastern lumber manufacturers to come west for conference with western manufacturers on methods of improving the industry. They ask the western men to join them in saving the industry by a great national advertising campaign, designed to teach the people to use lumber where best. By thus expanding their markets they expect to eliminate waste and generally to improve conditions.

"Successful competition of other building materials, especially concrete, and unfriendly tariff legislation have caused a decrease in lumber prices during a period when the price of every commodity, including those which lumbermen use, has been advancing. The federal census bureau shows that lumber prices were 10 percent less in 1915 than in 1906 and that the general level of commodity prices has advanced 33 percent in seven years. Many staples have advanced much more—potatoes, 71 percent; beans, 75 percent; canned goods, 100 percent; 26 grades of metals, 107 percent; iron bars, 117 percent; copper, 115 percent, and so on down the line. Lumber is the sole exception. In order to keep his head above water, the lumberman must raise money quickly and he can do this only by cutting the cream of the forest and wasting the rest. This hand-to-mouth policy destroys the forests, and with them the industry.

"Elimination of waste is necessary to save the industry, but this is possible only if scientific merchandising assures a larger market. By co-operation alone can the market be materially broadened to cover by-products from material which is now wasted. Combination, such as has taken place in many other industries, is necessary to utilize all material and eliminate waste. The small lumberman, who has a mortgaged plant and is driven to borrow on his shipments as soon as they are made, is financially unable thus to expand his business. The industry needs to be transformed from the lumber industry to the forest products industry, with large capital, scientific managers and chemists engaged in search of new processes to make new products, just as the pork packer has learned to use the whole hog. But large capital and expert brains cannot be enlisted in the industry until it is on its financial feet. Lumbermen can save themselves by working together for expansion of their market, for by so doing they can rise from the verge of bankruptcy to a position where they can command the credit to broaden their operations."

The National Lumber Manufacturers' Association

Being an Address Entitled "What It Has Done; What It Might Do," Delivered at Spokane, Washington, before the members of the Western Pine Manufacturers' Association, November 13, 1916

By R. H. DOWNMAN, President, National Lumber Manufacturers Association

The activities of the National Lumber Manufacturers' Association cover a wide field, and many diverse interests. In addition to three distinct departments—Credit, Insurance and Trade Extension—the association undertakes to handle, so far as its means permit, many problems which affect the general interests of the industry throughout the United States. During the past year these problems have been more varied, greater in number and of more direct financial importance to lumber manufacturers and timber land owners than during any previous twelve months in the history of the association.

Briefly sketched, they have been along the following lines:

CO-OPERATION WITH THE GOVERNMENT.

Whether we like it or not, the day is here when the lumbermen must keep closely in touch with congress and the various departments at Washington. If we wait in each case until something injurious to our interests has occurred, we will have little or no chance to rectify mistakes. If we co-operate fully and freely with the Washington officials at all times, it is very much less likely that detrimental measures and policies will be adopted without our having an opportunity to give them consideration. This has been strikingly exemplified during recent months.

INTERSTATE COMMERCE COMMISSION.

Following a twelve months' preliminary investigation, the Interstate Commerce Commission held in Chicago on July 10 to 22, 1916, a general hearing upon the classification of forest products throughout the United States. Briefs by counsel will be filed with the commission this month. Oral arguments will be made on December 15 and a final decision is expected from the commission some time in 1917.

The original intention of the commission was to hold hearings at various points throughout the United States, which would unquestionably have taken a considerable period of time, and developed many divergences of opinion. Moreover, most of the hearings would have been held by examiners for the commission. Due to co-operation through the National, the commissions and the lumbermen agreed to one hearing of the case, and that at Chicago, where interests were harmonized and a united front presented, upon the basis that there should be no reclassification that will prevent the shipment of all the customary and ordinary products of lumber manufacturing plants in one car at one rate. The entire hearing was presided over by Chairman Meyer himself, who took a keen personal interest in the case.

For the first time in history every branch of the lumber manufacturing industry presented a unanimous front upon a traffic question of great importance, and the outcome of the case will be much more satisfactory than if it had been handled without the direction and assistance of the National Lumber Manufacturers' Association. A reclassification, such as proposed by some of the carriers, would have cost

ROBERT H. DOWNMAN, OF NEW ORLEANS, LA.

the lumbermen hundreds of thousands of dollars in addition to no end of petty trouble and annoyance.

FEDERAL TRADE COMMISSION.

The lumber industry presented to the Federal Trade Commission its first big case, and the decision, which is expected soon, should set a precedent for dealing with all industries founded upon natural resources. In this case, as in the reclassification case, the advantages of handling matters of national import through the National association have been very great. If the commission finds, as overwhelming evidence should compel it to find, that there is no "trust" detrimental to the consumer among the lumber manufacturers, but that, on the contrary, both the industry and the public have suffered from the results of cut-throat competition in the manufacture and sale of lumber, and that only through co-operation can the rational use and conservation of our timber resources be brought about, a new policy of tremendous value and importance will have been instituted by the government. The formulation and carrying out of this policy would be impossible without the machinery supplied by the National Lumber Manufacturers' Association, or further machinery which can be installed in that organization to meet the future needs of the industry.

The paper read by R. H. Downman, president of the National Lumber Manufacturers' Association, before the meeting of the Western Pine Manufacturers' Association convened at Spokane, Wash., on Monday, November 13, is the best all-around resumé of what the National association has been doing and what it HOPES to do that has ever been offered to the lumber manufacturing interests of the United States.

The lumber manufacturers of the country have, somehow or another, had difficulty in grasping just what the efforts of the National Lumber Manufacturers' Association amounted to when added up and the result placed at the foot of the column.

That need never again be advanced as a reason for withholding support from this necessary institution, for Mr. Downman—who has so long been the leader of aggressive action on the part of the entire lumber industry of the country—has certainly thrown much light on the subject.

We commend this paper of Mr. Downman's to the careful and thoughtful attention of ALL LUMBERMEN, wherever dispersed.

EDITOR.

FOREST SERVICE.

Co-operation with the Forest Service has closely paralleled that with the Federal Trade Commission, and the findings of the commission will be largely influenced by the results of the detailed study of all phases of the lumber industry, made by the Forest Service during the last two years.

In all stages of this study the Forest Service has consulted fully and freely with the lumbermen, and the summary of the service findings will be the most illuminating document upon the fundamental conditions in the forest industries that has ever been given to the public.

In addition to its general survey the Forest Service has now undertaken the yearly collection of statistics upon the production of lumber, in which the National association has assisted in both a material and moral way. As a result of this co-operation the Forest Service has been able to determine the lumber production of the country much more promptly than ever before, and has supplied this information to the lumbermen as soon as compiled, without the customary red tape, which often interferes with the usefulness of government reports.

Recently the Forest Products Laboratory at Madison, Wis., whose entire work is devoted to tests and experiments, to determine the properties and uses of timber, has undertaken to supply the National association with a monthly report of the progress of its investigations. This report will be found regularly hereafter in the monthly bulletin of the association.

BUREAU OF FOREIGN AND DOMESTIC COMMERCE.

The Federal Trade Commission, the Forest Service, and the Bureau of Foreign & Domestic Commerce are working together upon problems in the production and distribution of lumber. The special function of the Bureau of Foreign & Domestic Commerce is to promote foreign trade. At its own expense the bureau has already sent experts to South America and the Orient, who have presented detailed and reliable reports upon the market for American lumber in these regions.

The funds of the bureau are not sufficient for its needs, however, so it is proposed that in

Digitized by Google

co-operation with the National Lumber Manufacturers' Association, six men be sent to Europe, as soon as possible, to get prompt and reliable information upon the character and extent of demand for American lumber immediately after the close of the war. The bulk of the money for this investigation, if it is made, will have to be furnished by the lumbermen, and they should welcome this opportunity to extend their business. The manufacturers of substitutes for lumber were on the ground long ago, and unless the lumbermen wake up, it will be the same old story, of losing out to competitors.

There is no question but that if a group of lumbermen were to organize a selling agency exclusively for foreign trade, and go after business vigorously, they would not be interfered with by the government. Yet there is a lingering doubt as to the legality of such organizations in the minds of many lumbermen so that little is likely to be done, unless congress definitely legalizes selling agencies for foreign business. This was the design of the Webb bill, which passed the House in August, but which did not go through the Senate, because of the press of other matters before adjournment. The Webb bill is favored by the leaders of both parties. It is scheduled to be taken up when congress reconvenes in December, and every lumberman in the United States should support the efforts of the Federal Trade Commission and the Bureau of Foreign & Domestic Commerce to get this bill speedily enacted into law.

THE INTER-INSURANCE EXCHANGE.

The National Lumber Manufacturers' Inter-Insurance Exchange, organized November 15, 1914, began to write business on February 15, 1915, with thirty-five subscribers and $675,000 at risk. It now covers lines on 188 mill properties of 178 subscribers, and has over $6,000,000 of insurance in force. The exchange has grown twice as rapidly as any other inter-insurance exchange during the same period of time following its organization. All risks are carefully inspected and none are taken which are not of a satisfactory character with respect to both moral and physical hazard. The loss ratio so far this year has been only 17 percent. The surplus funds of the exchange are carefully invested in the highest grade of securities, under the direction of a special investment committee of the National Lumber Manufacturers' Association. The exchange has been admitted to do business in the states of Illinois and Oregon, and has applications pending in Wisconsin, Arkansas and North Carolina. Admission into other states will be asked for as rapidly as is desirable for the interests of the subscribers.

Beginning December 1, a permanent representative of the exchange will be stationed at Portland, Ore., to look after the interest of west coast subscribers and to inspect and solicit new business.

The management of the exchange, under the direction of an advisory committee, consisting of well known lumbermen, is on a conservative basis, and the indemnity offered for loss by fire in the sawmills, planing mills and lumber yards of manufacturers is prompt and absolutely sound. All officers of the exchange are on a fixed salary basis. No commissions are allowed, and, there is, consequently, no inducement to take on bad risks for the sake of an increase in business.

As soon as the lumbermen of the country give the support that they should to an organization operated exclusively and solely for their benefit, they will get cheaper insurance than they can possibly secure by any other method.

CREDIT CORPORATION.

The National Lumber Manufacturers' Credit Corporation is another service department of the National, operated without profit, and entirely for the benefit of the lumber manufacturers. The "Blue Book" now has more than 1,000 subscribers, and carries 50,000 references. Its service and extent are constantly improving, and the corporation is on a self-sustaining basis. Beginning on April 1, 1917 (the April edition), it is hoped to establish a Canadian list, unsettled conditions, due to the war, making the earlier compilation of a satisfactory list of this kind difficult and uncertain.

The terms of subscription to the services of the corporation are $40 a year to members of the organizations affiliated with the National Lumber Manufacturers' Association, and $50 a year to non-members, which includes the regular April and October editions of the "Blue Book" and sixty special reports, together with the weekly and monthly correction sheets of the "Blue Book."

In addition to credit rating reports, the corporation maintains a very effective collection service on a low schedule of fees with bonded attorneys at all important points.

Every lumber manufacturer in the United States should use the "Blue Book." It is the inalienable property of the National Lumber Manufacturers' Association.

COMPILING STATISTICS.

One of the prominent functions of a trade organization is to compile and distribute statistics. The National report of the cut and shipments of lumber now covers a greater volume of lumber movement than ever before. It includes one-third of the entire lumber production of the country, and, representing all sections and all woods, is a safe barometer of general conditions. The monthly production and shipment curves and summary of business conditions, published by the National, have very great value to every lumber manufacturer who will study them. Supplementing the monthly reports, which come from all the affiliated associations, the National has lately undertaken the publication of a weekly statistical chart, summarizing the production, shipment and orders of the Southern Pine, Western Pine and West Coast Associations, the only affiliated associations that at present secure weekly statistics. If the other associations will furnish similar reports, the weekly summary published by the National, will become a prompt and highly useful barometer of conditions in the lumber industry.

TRADE EXTENSION.

The Trade Extension department of the National is the newest department of the association, and should be the largest one. Its possibilities are limited only by the extent to which the lumbermen furnish funds for the promotion of their own business. The plan of organization, adopted at the meeting of the Forest Products Federation, in Chicago, February 24 and 25, 1915, proposed a fund of $200,000 a year for trade extension, and recommended the establishment of the Trade Extension department, when a minimum of $50,000 a year had been pledged. This amount was guaranteed on July 14, 1915, and the department formally organized. Some pledges to the fund have not been made good, and, so, despite a considerable number of subscriptions received since the organization of the department, its present reliable support consists of about $56,000 a year. At the very minimum, the lumber manufacturers and timber land owners of the United States should furnish $100,000 a year for national trade extension. Unless they do so, it cannot be considered that they believe seriously in the necessity for adopting modern means for the protection and extension of their markets.

Just by way of illustration, it may be mentioned that our most formidable competitor—the Portland Cement Association—has 225 employes and keeps 150 men (many of them engineers) on the road to see that cement is rightly used. The Trade Extension department of the National Lumber Manufacturers' Association does not even have the full time of one engineer in the Chicago office, let alone keeping an engineer or any one else constantly on the road to study the lumber market, help consumers and combat all kinds of unfair attacks upon our products.

VALUABLE PUBLICATIONS.

Notwithstanding the almost criminal lack of support for the Trade Extension department, it has been organized upon a sound basis, and has begun permanent work of great benefit to the lumber industry. One of the first efforts is to create a reliable series of reference literature upon the use of lumber for the architect, the engineer, the contractor and the builder. The "Engineering Bulletins" have been gladly received and used by architects and engineers everywhere, who have long wanted and been unable to get this kind of information upon how to use timber. The bulletins upon "Farm Structures" are having an enthusiastic reception from lumber dealers, farm papers and agricultural colleges. They fill a distinct gap in their field. The bulletin upon "Teachers' Cottages," published in co-operation with the United States Bureau of Education, has received literally hundreds of feet of favorable comment in newspapers all over the United States. It was given a page editorial in the "World's Work" for July, and many of the illustrations which our bulletin carried were reproduced in the "Ladies' Home Journal" for August. The building of new teachers' cottages can be directly traced to the influence of this publication.

BUILDING CODES.

There are 125 cities in the United States of more than 50,000 population, in scarcely one of which is the building code worked out upon the basis of a right and intelligent use of wood. In fact, in nearly all of them what little reference, if any, there is to wood is either incorrect or incomplete. These cities have been a big market for our products in the past. They will afford a very small market in the future unless we put the use of our material upon the same scientific basis as that of other materials, and actively participate in the framing of building codes to see that our products are given the consideration their merits warrant. Already the National Lumber Manufacturers' Association has been of material assistance to several cities in the revision of their building codes, but we cannot handle this question in any adequate way until we are able to keep a first-class engineer on this one job all the time.

FIRE-RETARDANTS.

Closely connected with the use of lumber, and especially within the fire limits of cities, is the

Digitized by Google

question of making shingles more fire resistant. The elimination of shingles from many communities has been more hysterical than reasonable, due to an insidious cultivation of the idea that "wood burns" by interests which have much to gain through the prohibition of the use of wood. A large field of lumber and shingle consumption has already been lost in this way. Much more will be lost unless we begin at once to show, as we can conclusively, that the fire loss of the country is due very much more to carelessness, methods of construction and combustible contents than to the materials of construction themselves. Moreover, the small amount of preliminary work that we have been able to do in the testing of fire-resistant compounds for shingles and lumber must be greatly increased, and the results thereof given to the public, if we are to maintain the market, which, after all allowance is made for public safety, we are rightly entitled to.

There is no question but that practical and economical methods can be worked out for the making of the exteriors of wooden buildings reasonably fire resistant, but it takes money to do these things, and it is up to the lumbermen to supply the means of accomplishment.

EXHIBITS OF LUMBER AND PRODUCTS.

There is no field in which, for the amount of money invested, more can be done than in the preparation and proper display of exhibits of samples of lumber, of finished woods, of models of buildings, and of literature about lumber. In a small way we have tried this out during the past three months, with exhibits at twenty-two state fairs and industrial expositions. The attendance at these shows has been very large and the interest in our exhibits has been great at every place. No literature was given away anywhere to be glanced at and cast aside. People who had a real interest in lumber, or who wished to build, were given an opportunity to examine the publications of the National and of the affiliated associations, and to leave their names, addresses and occupations for the subsequent mailing of such literature as they indicated they were especially interested in. Handled in this conservative way, our exhibits have brought in cards carrying the names of some 3,000 individuals of the character indicated, with a request for some 28,000 publications dealing with the various uses of lumber.

Work of this character should be standardized and extended until it covers every important fair and exposition in the United States where industrial exhibits are permitted.

NEWS SERVICE.

For the last nine months the National Lumber Manufacturers' Association has been furnishing a weekly news service to many of the more important newspapers throughout the United States. There has been no attempt in this service to cover up anything, or to put anything over for the lumberman. It has been simply straightforward news, briefly told, in interesting fashion. The service has been helpful to the papers and of value to the readers. What we have done demonstrates that the papers of the country are not necessarily prejudiced against the lumber industry, but that they have often printed detrimental items about the industry because no one took the trouble to furnish them with the facts.

RETAIL CO-OPERATION.

One of the most important lines of work of the Trade Extension department consists of co-operation with retailers. The retail yard dealer is the man who distributes the bulk of our product to the invidual consumer. In many ways he knows more about the consumers' needs and prejudices than we do. It is highly important that in every possible way we furnish information and service to the retailer that will help him sell our material to the farmer, the contractor, the engineer, and to everyone who has need for a shingle or a board.

We put a man on the road for a short time, who visited many of the principal retailers in the smaller towns of Indiana and Iowa, the purpose being to get the retailer's point of view; to find out exactly what his problems are, and what his attitude is toward both the consumer and toward the lumber manufacturer. The conclusions from this investigation are that often and in many ways the retailer has gone ahead of the lumber manufacturer in the adoption of modern methods of merchandising. We have nothing to gain by throwing bricks at the retailer. We will lose greatly unless we co-operate with him and make it easy for him to sell our products. Co-operation, which in a limited way we are so far able to offer to the retail dealers, consists of our bulletins upon "Farm Structures," of a series of small leaflets, suggesting particular opportunities for increasing lumber sales, and of a few short cartoon films for use in local moving picture theaters. These have been supplied free of charge. In addition, we are now in shape to offer to the dealers, at cost, models of the principal types of farm buildings, finished panels of the leading commercial woods and racks for the display of literature.

A carefully selected mailing list of some 25,000 retailers has been compiled, and is being put upon addressograph plates, in addition to which a "booster" list has been separately worked out of particularly live dealers who are most interested in trade extension, and whose efforts, freely supplied, will be particularly helpful in promotion of the sale of lumber in their respective localities. These "boosters" have already asked for more than 100,000 copies of our bulletins on "Farm Structures."

IMMEDIATE PROBLEMS.

To sum up, here are some of the bigger things that demand immediate attention:

Comprehensive study of building codes and development of the model code.

Adequate representation and organization against anti-shingle legislation.

Further facilities for developing fire retardants and studying shingle roofs.

Representative to present wood construction to architects and engineers.

Series of lectures in engineering colleges and universities upon the use of wood.

Representation at Farmers' Institutes.

More representatives among retailers.

Expansion of moving picture service.

This is a very scant outline of some of the more important activities of the Trade Extension department. These activities can be extended indefinitely and helpfully if the lumbermen will only support their own business as they should.

WEST COAST ORDER FILE.

The weekly report of the West Coast Lumbermen's Association, giving the orders accepted, the shipments and the unfilled orders at the close of the week ended November 11, is the total of reports compiled from 124 mills. The report shows for the rail trade as follows:

	Cars
Unshipped orders Nov. 4	10,010
Orders accepted to Nov. 11	2,002
Total	12,012
Orders shipped during week	1,584
Balance orders unshipped Nov. 11	10,428

This shows an increase during the week of unfilled orders of 418 cars. During the week the rail orders exceeded the shipments by 10,450,000 feet, or 20.88 percent.

The cargo trade makes the following showing:

	Domestic— Feet	Export— Feet
Unshipped orders week Nov. 4	59,101,569	50,734,186
Orders accepted week Nov. 11	7,820,543	4,726,300
Totals	66,922,112	55,460,486
Shipments week ending Nov. 11	8,922,364	5,020,374
Balance unshipped orders	57,999,748	50,440,112

The water shipments exceeded the cargo orders 1,395,895 feet, or 10.01 percent.

SOUTHERN PINE TRADE BAROMETER.

The weekly trade barometer of the Southern Pine Association for the week ended Friday, November 17, was published November 20 and received in Chicago November 22. The report was compiled from figures from 153 mills or seven mills less than the figures tabulated the previous week. These mills reported as follows:

	Cars	Feet
Orders on hand	28,485	603,084,420
Orders received during week	4,344	91,971,168
Total	32,829	695,055,588
Shipments during week	3,667	77,637,724
Balance orders on hand	29,162	617,417,864

The figures show that in the last two weeks the total unfilled orders increased 1,800 cars or 37,000,000 feet, in round numbers. The report shows that the orders were in excess of the production during the week 1,429,408 feet, or 1.58 percent; that the orders exceeded the shipments for the week 14,333,444 feet or 86.46 percent; and that the shipments exceeded the production 12,904,036 feet, or 14.25 percent.

The report of orders, shipments and unfilled orders for each week during September and October and up to the third week of November are as follows:

Week Ended	Mills Reporting	Average Orders Feet	Average Shipments Feet	Total Unfilled Cars
Sept. 1	152	625,570	610,499	19,962
Sept. 8	157	538,353	565,145	23,284
Sept. 15	164	669,579	606,197	24,122
Sept. 22	168	671,331	558,540	24,539
Sept. 29	153	641,717	522,626	24,242
Oct. 6	160	514,549	435,300	24,409
Oct. 13	152	636,911	509,140	26,196
Oct. 20	157	524,657	477,058	26,978
Oct. 27	159	524,696	521,244	27,304
Nov. 3	151	639,032	528,589	27,368
Nov. 10	160	569,178	491,203	27,994
Nov. 17	153	601,119	507,436	29,162

Observations in the Realm of the Retailer

A Seven Room House to Cost About $3,500

A SERIES OF ARCHITECTURAL DESIGNS OF HOUSES PLANNED TO BE BUILT OF ARKANSAS SOFT PINE.

Recently the Arkansas Soft Pine Bureau issued through the medium of the press of the American Lithograph Co., one of the most beautiful architectural books which has ever been given out to the lumber trade of America, entitled "NOT A HOUSE BUT A HOME," and containing a number of house plans designed by the well-known architect, Aymar Embury II, of New York.

Through the courtesy of R. H. Brooks, who has charge of the advertising of the Bureau, we have secured the privilege of republishing these designs in the LUMBER WORLD REVIEW, and we are running them in our general department, "Observations in the Realm of the Retailer," believing that if there is one thing in which all retail lumbermen MUST be interested it is in SUCH a series of PLANS, and we want to suggest that every retail lumberman who receives the LUMBER WORLD REVIEW file away the copies which contain these plans.

We do not know whether "Not a House But a Home" is out of print or not, but it probably is; and if that be true this may be the only opportunity there is to secure these etchings of the house plans.

EDITOR.

There is probably no type of roof better adapted to a small house than the so-called "Dutch" or "gambrel" roof which has been used in the design of this house. It automatically gives a low appearance to the building, and at the same time reduces the size of the second story very slightly, because the lower slope of the roof is so steep. The house is not very much larger than the six-room house shown October 10, but is very much better arranged, because the entrance is at the side of the long front, instead of being at the corner, and a really large living-room, good-sized dining-room, and a very fair kitchen and pantry are obtained on the first floor, and four excellent bedrooms with good closets on the second. Probably of all the houses we have shown in this series, there is none of greater all-around excellence, when one considers plan, cost and appearance.

The house is intended to be plastered throughout, and trimmed with a base and picture mold in all the principal rooms. For a maximum effect in the interior, the floors should be stained very dark on the first floor, waxed and polished. The colors of the house which are thought most appropriate to the design are white with brown or grey roof and green blinds. The decorative treatment of the front is inexpensive, but effective.

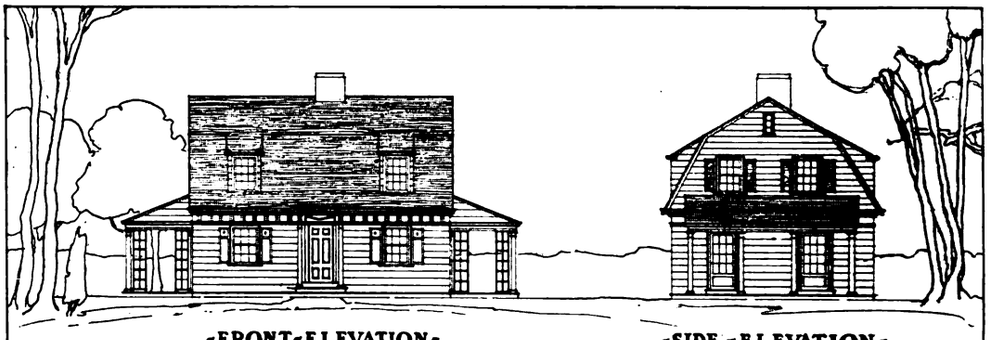
There will be a cellar the full size of the building, with a heating plant placed therein, and with a considerable amount of attic space over the second story, which will make the house cool, and give ample storage. The attic space could be reached as in the previous case, either by a folding staircase or by a ladder or scuttle.

TABLE OF CARPENTER MATERIAL.

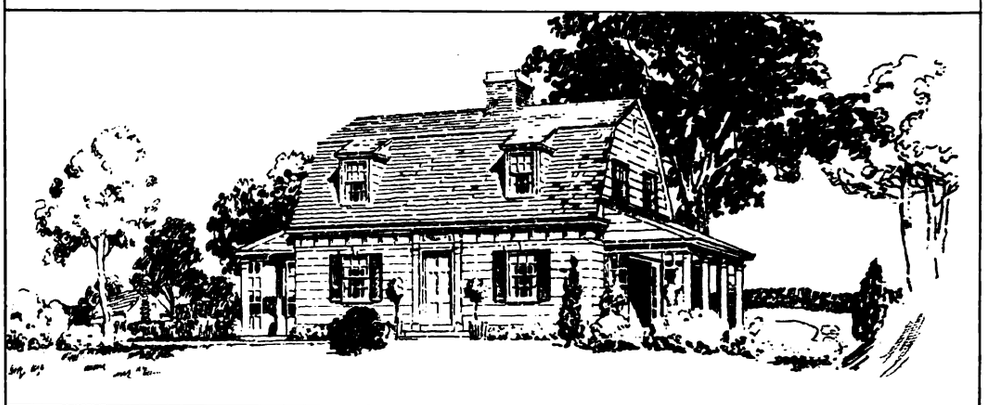
NOTE—All amounts given do not allow for waste. Where there is doubt about widths of material the areas to be covered are given in square feet. Trim should be allowed for both sides of all openings.

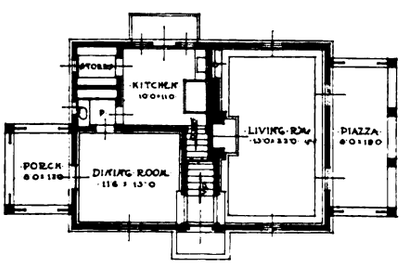
Lumber.

*Framing (joists, studs, etc.)	9,000 ft. B.M.
*Sheathing, rough floor, etc.	3,822 sq. ft.
Wall shingles	4,000
*Shingle strips	3,024 lin. ft.

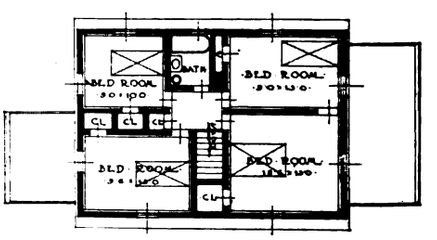


-FRONT-ELEVATION- -SIDE-ELEVATION-





-FIRST-FLOOR-PLAN-



-SECOND-FLOOR-PLAN-

Shingles for roofs	9,500
*Ceiling (porches)	264 sq. ft.
*Finish flooring	1,900 sq. ft.
*Porch flooring	285 sq. ft.

Millwork.

*Main cornice and frieze	85 lin. ft.
*Rake cornice	84 lin. ft.
*Dormer cornice	60 lin. ft.
*Water table	144 lin. ft.
*Piazza and porch columns, six, 7 in. x 7 in. x 7 ft. 6 in.	
*Piazza and porch pilasters, four, 2 in. x 7 in. x 7 ft. 6 in.	
*Piazza cornice	66 lin. ft.
*Piazza rake cornice	36 lin. ft.
*Lattice, eight pieces, 1 ft. 9 in. x 7 ft. 6 in.	
Windows, cellar	4
Windows, D. H.	14
Windows, casement (attic)	2
*Blinds, pairs	7
Doors, exterior, special trim	1
Doors, exterior, plain	3
Doors, interior	16
*Trimmed openings	3
*Base	475 lin. ft.
*Picture mold	350 lin. ft.
*Stairs, cellar, to second floor.

Doors, Sash and General Millwork Review

Current Conditions of the Country's Market

By LUCIUS E. FULLER

Although the closed season in mill work is supposed to be at hand, the sash and door factories and distributing houses are scarcely aware of any falling off in the activity in their stock and odd work departments. Most of the distributing houses are supplied with sufficient orders to keep them busy until the holidays, if not beyond. Frequently there is a lull during and after the holiday season, but unless many orders that are now regularly booked are cancelled, there will be no serious let up in the sash and door activity, generally speaking, through the winter. Building operations have been heavy and much of the work started is now at the stage where the mill work is wanted for installation before frigid weather sets in. Stocks in retail yards are so low that when an order from a country customer is placed, the nearest wholesale house is called upon for urgent delivery of an equivalent order.

Permits taken out during October illustrate a more general activity in building operations over the country than was visible in September and are considerably heavier than a year ago in the corresponding month. This, however, can hardly be expected to keep up, for the northern building situation will doubtless quickly respond to the depressive influence of cold weather.

High prices of commodities, especially in foodstuffs and vegetables, have begun to alarm the consuming public. In many cases it is believed that the recent heavy increase in prices is unjustified and it is not unlikely that steps will be taken to correct discrepancies that are found. Lumber alone has scarcely advanced in price above the average of the last few years. Whatever advances have been made in lumber are due to the car shortage and not to any concerted movement on the part of producers, wholesalers or retailers.

Demand For Shop Lumber.

Owing to the continued scarcity of cars, delivery of shop lumber from both northern and western mills is seriously delayed and consequently anything that can be delivered promptly commands improved prices. The northern pine mills, according to their representatives in this territory, are supplied with orders beyond their ability to ship with any degree of promptness, and consequently there is a large unfilled requirement throughout the entire territory east of the Mississippi river for northern pine, especially in the shop and better grades. As far as the Inland Empire is concerned stocks of shop lumber there are in poor assortment and are not well filled, while the car shortage is always with them to restrict their deliveries. The California pine manufacturers are handicapped fully as much as, if not more than, their brethren in the other districts.

Little relief can be expected in the shop pine market until cars are more plentiful, or the lumber already manufactured is fit for shipment. Practically all of the northern pine mills and most of those in the west are closing down for the winter, so that the expectation that values will continue good during the next few months appears to be well founded.

Chicago Trade Observations.

Distributers in the Chicago market say that they are having all the business they can handle. Naturally they are not getting as many new orders as they were last month, but they were so well filled up prior to November 1 that they are doing very little worrying as to the immediate future. Meanwhile they are getting in a fair volume of new orders and the inquiries still keep coming along. It must be remembered that Chicago distributers cater to a country-wide trade and that their business is not necessarily circumscribed by the advent of cold weather in the north. The prospects seem excellent at this writing for sufficient work to keep the factories busily occupied through the holidays.

Demand from the immediate Chicago territory is reported to be gradually lessening and it seems more than likely that this will ultimately mean a falling off from the present activity. Odd work predominates in the inquiries and orders, and the sash and door men are loaded up with an immense amount of this class of business. At the same time the Chicago dealers report that they are having a good demand from the surrounding territory for stock items, although not necessarily in large individual orders. Some car load trade is reported, but this is not expected to make much of a showing before the latter half of December. Discounts are firm at the quotations in effect October 1.

The Market For Window Glass.

There is no appreciable change from the tense situation which has existed in the window glass market since last spring. The hand and machine factories have both been in operation for thirty days and have not been able to make much impression in keeping up with the demand, stocks having been nearly exhausted and badly broken before the fall fires were started. The only indication of relief is that the consuming demand is naturally receding at this season, while the volume of manufactured products is increasing and most likely in the near future there will be a point where these two elements will be equalized. Meanwhile there is no evidence of a weakening in prices, which are held at the figures prevailing last month. In fact there is reported a possible 10 percent advance in the near future. Owing to a failure in the natural gas supply, many glass factories were forced to close down during the recent cold weather and much apprehension exists in regard to the future.

Conditions at the Door Factories.

Reports from the large stock factories of Wisconsin and the Mississippi valley are all favorable, indicating a splendid volume of business and unavoidable delay in making deliveries, owing to the pressure of urgent requirements. Some of the factory operators say that they have enough work on hand to keep them going without difficulty and at full capacity until the inventory period around the holidays, with a considerable quantity of orders left over for later attention. Some difficulty is experienced on getting forward supplies of raw material because of the car shortage. The output of veneered doors is unusually heavy and the demand is persistent. Some inquiries for car load lots are in evidence, but the bulk of the car load trade is not expected until next month. Lately a large demand for storm sash and storm doors has been developing at all northern factory points and from present prospects this is likely to be a very important factor during the next few weeks.

A Large Sash and Door Meeting.

There was a well attended meeting of sash and door distributers from all over the country at the Congress hotel in this city on Friday, November 10, at which, it is said, the subject of cost accounting was chiefly discussed. Among the out of town manufacturers and wholesalers here were J. A. Cheyne, of the Pennsylvania Door & Sash Co., Pittsburgh; Fred W. Rockwell, of the same company, Philadelphia; Ward Jackson, of the Whitmer & Jackson Co., Cleveland; William Lothman, of the Foster-Lothman Mills, Oshkosh, Wis., and St. Louis, Mo.; Harry G. Gould, of the Gould Manufacturing Co., Oshkosh, Wis.; J. G. Morris, of the R. McMillen Co., Oshkosh, Wis.; C. L. Barnett, of the Collier-Barnett Co., Cleveland, O.; C. O. Rogers, of the Adams-Rogers Co., Indianapolis, Ind.; E. J. Bergk, of Curtis Bros. & Co., Clinton, Iowa; A. A. Carson, Detroit, Mich.; E. G. Curtis, Detroit, Mich.; C. B. Towle, Curtis, Towle & Paine Co., Lincoln, Neb.; J. A. Loetscher, Farley & Loetscher Manufacturing Co., Dubuque, Ia.; Arthur Rabe, Commercial Sash & Door Co., Pittsburgh, Pa.; A. R. Teachout, A. Teachout Co., Cleveland, O.; B. J. Throop, Throop-Martin Co., Columbus, O.; Albert J. Phinney, Iroquois Door Co., Buffalo, N. Y.; George H. Kelly, Adams-Kelly Co., Omaha, Neb.; M. B. Copeland, M. A. Disbrow & Co., Omaha, Neb.; H. H. Strasburger, Radford & Wright Co., Duluth, Minn.; A. J. Siegel, Huttig Sash & Door Co., St. Louis, Mo.; F. J. Moss, American Sash & Door Co., Kansas City, Mo.; Mr. Lee, Greer-Wilkinson Co., Indianapolis, Ind.; Allan A. Smith, Goodsell Manufacturing Co., Toledo, O.; J. M. Farrell, Goshen Sash & Door Co., Goshen, Ind.; L. J. Bardwell, Bardwell-Robinson Co., Minneapolis, Minn.; W. L. Roach, Roach & Musser Sash & Door Co., Muscatine, Ia., and others.

Action was taken in the appointment of a committee on trade relations, to which will be assigned the somewhat onerous task of developing a cost accounting system that will be adaptable to the entire industry. This committee will also have in hand other work of particular moment to the trade. The meeting was addressed by Gen. L. C. Boyle, of Kansas City, Mo., on the general subject of getting together on some common basis of co-operation and especially with regard to the attitude of the Federal Trade Commission toward the lumber interests and the efforts to improve their condition.

THE DOWNMAN COMMITTEE'S TOUR

Distinguished Eastern Lumbermen, Representing National Lumber Manufacturers' Association, Warmly Welcomed by Inland Empire and Coast Manufacturers —Interests of National Body Vastly Promoted—Remarkable Addresses by Messrs. Downman, Keith, Goodman and Turnbull

By the time the presses are roaring on the November 25 issue of the LUMBER WORLD REVIEW on the night of November 24, there will have terminated at San Francisco, California—provided the program is carried out as now understood—the most remarkable series of meetings ever held in the lumber world looking towards the promotion of wood in the impersonal.

We refer to the tour just finished by R. H. Downman, president of the National Lumber Manufacturers' Association; A. R. Turnbull, president of the North Carolina Pine Association; R. B. Goodman, former president of the Northern Hemlock & Hardwood Manufacturer' Association; Charles S. Keith, president of the Southern Pine Association; F. E. Weyerhaeuser, of St. Paul, Minn., and Warren R. Bullock.

This invasion of the West by the East has been in contemplation by Mr. Downman and associates of the National Lumber Manufacturers' Association since the period of the classification meeting held in Chicago last summer and was originally suggested by Captain E. A. Selfridge, jr., of Willits and San Francisco, Cal.

The first thought was to make up a party of practically the entire directorate and all the important committees of the National Lumber Manufacturers' Association and an endeavor was made by Mr. Downman to bring that about.

At one time twelve or fifteen people had definitely promised to make the journey, but in the end the party narrowed down to those mentioned above, which may have seemed discouraging at first, but which should not now be considered an element of discouragement since the accomplishment of the journey that has just been completed.

It has been the privilege of the editor of the LUMBER WORLD REVIEW to make this journey with Mr. Downman and party and to have attended all but two sessions of the various meetings that have been held; so we may claim to have had at least an opportunity to judge at first hand of the value of this excursion and qualified to make what may be considered to be some very remarkable utterances, in that department of this publication where the editor "Looks Towards the East and to the Sunrise."

In writing of this event in the so-called running story following, we are going to do it in the nature of a review, rather than to print every little detail of who said things and how they said them; but rather to give an idea of what the various conferences spelled in total.

The sessions of the meetings which will be referred to as having occurred at Spokane will contain shortened forms of Charles S. Keith's paper and R. B. Goodman's paper, and of course these papers will not be again printed, but only referred to casually in the details which follow.

These two reports are a little the most formidable, exhaustive and radical and yet logical revelations that have come to the ears of lumbermen in this day and time and if they were printed in full would easily fill an entire issue of the LUMBER WORLD REVIEW.

THE FIRST SESSION AT SPOKANE.

The party arrived at Spokane over the Northern Pacific "Great Big Baked Potato Route" at 9:30 o'clock on the morning of November 13, went to the Hotel Davenport and in a few minutes thereafter the called meeting of the Western Pine Manufacturers' Association, which numbered about forty members in attendance, was drawn up to attention in the Elizabethan room of the Hotel Davenport to listen attentively to what the eastern and southern and northern lumbermen had to say to them.

After the preliminaries had been accomplished, R. H. Downman read his story of all and various accomplishments of the National Lumber Manufacturers' Association, being really a history of that body from its inception.

This document was listened to with a great deal of attention and gave a great deal of light to the Western Pine Manufacturers' Association membership.

Although the document was formidable in length we consider it of enough importance to every lumber manufacturer of the United States to print it in full in another part of this publication, with the hope that all of the people in lumber who really want to know something about the activities of the National Lumber Manufacturers' Association will read it through from beginning to end, and then, appreciating the unselfish devotion to the trade that Mr. Downman has shown, that each and every one of them will write a letter to Mr. Downman thanking him for his great work.

That would be the least the trade could do in appreciation.

Following the reading of Mr. Downman's paper, he was asked a great many questions by a very much interested audience but these queries and impromptu talks will not be made a part of this story, inasmuch as they were of a more or less intimate nature and only served to enlighten the hearers on the subject of Mr. Downman's statements, which any reader can accomplish for himself by turning to another portion of our publication and reading the Downman paper.

Those in attendance at the meeting seemed to be especially impressed with Chas. S. Keith's revelations in regard to the amount of money—some $400,000—which his association—the Southern Pine Association—had collected and will have utilized in 1917. Mr. Keith explained also that their appropriation was automatically to be increased each six months in $60,000 sums.

Following Mr. Downman's paper, R. B. Goodman read his formidable document on "The Outlook for Western Timber," a short form of which we print herewith, including an etching of one of the diagrams which Mr. Goodman exhibited in order to—in a simple way—throw light on the text of the paper.

Mr. Goodman's opinion of this diagram—"This chart represents the regional production of lumber from 1880 to 1915 as compiled by the Forest Service and from 1915 to 1940 on forecast based on a study of future production in the southern states by Charles S. Keith, and a continuation of the decline in production for the northern states already in evidence. The dash and dotted lines show how future prosperity or ruin to the timber owners of the west is dependent upon the success or failure of co-operation, effort to develop domestic and foreign markets for lumber"—has ALSO been printed as underlines beneath the etching of the chart referred to.

We submit the text of Mr. Goodman's paper in a shortened form without further comment:

THE FUTURE OF WESTERN TIMBER. REGIONAL AND NATIONAL CO-OPERATION WITH INDIVIDUAL PARTICIPATION WILL ASSURE SUCCESS.

By R. B. Goodman.

In the east we use the general term lumber industry as inclusive of the owning and carrying of timber. The timber that is held for lumber manufacture is either in the hands of men or corporations who are already operating mills, or planning to do so, or it is held by small owners, who bank on a known mill demand. It is customary with many operators in the east to charge the taxes and supervision on their timber against the stumpage; in some cases also the interest on the cost of their timber, especially the actual interest on loans made in its acquiring. In such cases the advancing cost of stumpage each year makes a continually higher stumpage charge against operating expenses. The wisdom of this kind of accounting has been questioned, especially in view of the uncertainty as to further advances in the price of lumber. Other than as a matter of distributing fixed charges, however, the carrying of timber is not a serious problem with the lumber industry in the northern and southern states.

CARRYING CHARGES.

The question has been raised that the interest on the cost, the taxes and the supervision of this timber creates an annual charge that must be met year after year, until the timber is cut, and the interest on these annual charges must likewise await payment till the timber is cut; hence the compounding of these charges, and, therefore, the astonishing but most reasonable conclusion that timber worth $2 a thousand today carried at 8 percent for interest, taxes and supervision, will aggregate a total investment of $93.80 in fifty years.

This is interesting, but nothing to be alarmed about. It is based on the unfortunate habit some of us have in insisting on counting chickens before they are hatched. Timber is just simply a natural resource. Lumber, lumber uses, lumber prices, are man made. The lumber industry is the process of liquidating the timber. Whether the price of lumber yields 50 cents, or whether it yields $5 a thousand on the timber cut, depends more on the men behind the tree than on the tree itself. While the man who buys trees to sell at some future date is not a manufacturer or an operator (except to the extent of his work in protecting his forests) he is also a legitimate enterpriser. The old idea that timber possessed an inherent destiny by virtue of which it can reap an automatic profit for its owner has passed.

TIMBER OWNERS SHOULD AID.

If the timber owner wants a profit it is up to him to do what he can to assist the lumber industry to develop that profit. We have no sympathy for the timber owner who spends his winters in Palm Beach and his summers in Maine, and says to Mr. Downman: "I'm not interested in trade extension. I'm not manufacturing any lumber." This is now an almost extinct type, however. The timber owners are just as keen as any other class of lumbermen today to do their share, when they are brought to a proper realization of the conditions affecting the industry.

THE FORESTS OF THE WEST.

Counting Montana and Idaho with California, Oregon and Washington, we have exactly one-half of the standing timber in the United States. Some two-fifths is under governmental and state ownership; the remaining three-fifths is under private ownership. Of this privately owned timber, 80 percent is in the possession of timber owners owning in excess of 60,000,000 feet, and 20 percent in the hands of farmers and settlers, owning less than 60,000,000 feet. In the former class there are 1,802 individual timber owners, according to the report of the old commissioner of corporations. These 1,802 owners are largely corporations, in some cases corporations with several thousand stockholders. These owners and these stockholders live in all parts of the country, and have it in their power, the commissioner's report states, to materially affect conditions in the lumber industry. This certainly is true, and this is largely why there is a real hope for future prosperity in the industry.

DEFICIT IN MANUFACTURING.

E. T. Allen, in his brief to the Federal Trade Commission, shows by authentic figures that the total cut of Douglas fir of western Washington and Oregon, amounting to over 5,500,000,000 feet, did not fetch the industry enough in excess of the actual cost of production to pay the taxes and the cost of fire protection in the plants and timber, and nothing for the tree itself. The figures are interesting. The realization at mill averaged $13 a thousand; the cost of production was $11.05 a thousand; the margin was $1.95 a thousand.

This amount into 5,500,000,000 feet is not quite $11,000,000, while the taxes on privately owned timber, logging plants and sawmills were nearly $6,000,000, and with the fire protection more than $6,000,000. This was for 1913. Conditions are no better in 1916. Facing this situation as more or less true of all privately owned timber west of the Rockies, we have the serious question: If timber cut will not carry the taxes and protect from fire the supply of standing timber, will the increased

Digitized by Google

cut and increased value do so in the future, and then leave an ultimate margin for the tree itself? I believe it will.

THE TREND OF LUMBER PRODUCTION.

The consumption of lumber has not increased. According to the Forest Service it reached its maximum in 1909, at around 44,500,000,000 feet, and has been decreasing ever since to around 37,000,000,000 feet in 1915. Your rate of cutting has slightly increased, but only slightly, during this period. Your taxes and cost of production have increased more than the prices you obtain for your product. It is a most gloomy picture.

We find that for thirty—possibly for sixty—years prior to 1907 the advancing price of lumber covered amply the burden of carrying the timber. During the past ten years prices for lumber have remained practically stationary; the costs of production have increased and the consumption has decreased. A study of changes in our national industrial life that have taken place during this period show much that is disastrous to the prospects of the lumber industry. These changed conditions may be briefly summarized:

First—The change from rural to urban population, with its attendant decrease per capita in consumption of lumber.

Second—The enormous promotion of substitute building materials, beginning with wire fencing and cement sidewalks and ending with steel and reinforced concrete buildings and paper boxes.

Third—Changes in marketing methods that the lumbermen have failed to keep abreast with, more particularly the guarantee to the consumer, in one form or another, of the qualities of the article which he buys, the safe stresses of steel beams, the accurate chemical formula of steel, the definite guarantee tests of branded cement, the trade-mark and guarantee back of the trade-mark on almost every material coming into competition with lumber.

Fourth—The widely separated small units of the lumber industry, which made trade extension and reasonable market regulation impossible.

Fifth—The campaign of fireproof building material manufacturers against wood, their common enemy.

All of these factors and many more are responsible for the public disfavor of wood and its decreased consumption.

As to our failure in marketing methods, I do not need at this time to more than point out that there has been in the last two years an enormous awakening on this subject in the industry, and the conditions of marketing lumber and promoting its use are being placed on the same plane as its competitors.

DIFFERENCES OF OPINION.

There are many lumbermen in our industry who do not believe in lumber. They did once, or they would not be in the industry, but they are easily discouraged as to the future, because they lost their faith in wood. The arguments, advertising and educational campaigns of our competitors have more or less convinced them. I have talked with numbers of these lumbermen, and they tell me that the total production of lumber is permanently on the decline.

There are also in the lumber industry men of far vision, men of unshaken faith in lumber, men of untiring energy, who tell me that the consumption of lumber cannot only be maintained at its present rate, but that domestic and foreign markets can be added to and cultivated and built up by co-operative methods, and that the work now under way within the industry will soon be developed on so extensive a scale that we may count on increasing our total production of lumber at least half a billion feet annually.

LUMBER PRICES AND MILL REALIZATIONS.

Of equal importance with the amount of lumber produced, is the trend of lumber prices to be received by the manufacturer in the future. I cannot impress too strongly the doctrine that lumber prices (and I am now talking of lumber as a building material and as a utility, not of lumber in the fine arts for interior trim and furniture), will not relatively advance in the future. There will be fluctuations, and there will be the fictitious appearance of higher prices over periods when the purchasing value of money is below normal, as it is at the present time. But the sine qua non of future prosperity in the lumber industry is cheap lumber. Without cheap lumber our marketing campaigns will fail. To increase the cost of lumber to the consumer is to invite him to purchase a substitute. There is the old saying: "You cannot eat your cake and have it."

Next to regional and national trade extension, I believe that the question of reasonably regulating production of lumber is the most important problem for the lumber industry to solve, and certainly the one whose solution will bring most immediate benefit. It is, however, a problem that goes to the basic principles of our economic fabric—a problem that cannot be solved without national co-operation on the part of lumbermen; without legislation that can only be obtained by a campaign of education that will mold public sentiment. No regional association can do this single-handed. Never before in the history of American business has our national government offered the machinery for developing wise economic business legislation that we possess today in the Federal Trade Commission.

INCREASED CONFIDENCE.

We have gone through the experience of cut throat competition, unbridled individualism and its disasters in all of the producing regions. In the days of unbridled individualism, cypress brought $8 a thousand mill realization. That was when every cypress manufacturer was fighting his own battles, and doing his own advertising. The manufacturers of gum learned the same lesson and manufacturers of hemlock in Wisconsin and upper

R. B. GOODMAN, OF GOODMAN, WIS.

Michigan have learned this lesson. The southern pine field is too vast in extent to be able to say that the co-operative spirit has thoroughly permeated all of it. It is the conclusion that the manufacturers of "Rite-Grade" shingles have reached; the manufacturers of maple flooring and the manufacturers of oak flooring have seen its wisdom; the manufacturers of fir lumber and of redwood—in fact, almost every species of lumber is now becoming the center of a group of manufacturers who have sufficient confidence in each other to compare costs and selling prices and keep each other informed as to market conditions, with the result that all of these manufacturers get more for their product at the mill than they formerly did, without increasing its cost to the ultimate consumer.

But this principle can be carried still further. That same co-operation that is profitable for the competitive manufacturers of lumber in each region is even more profitable when applied to the lumber industry as a whole. The National association is not yet sufficiently developed to undertake such a national co-operation as between competitive regions. In spite of all our development in co-operation, the great central and eastern consuming territory is bitterly competitive. The various association secretaries brag of having building specifications altered so that hemlock lumber is used instead of North Carolina pine, or that Arkansas pine is used instead of Douglas fir. I have even seen advertisements of a certain species of lumber in which "other kinds of lumber" was represented by a seedy looking individual, outside of the gate, and the prosperous gentleman inside the gate, where all the lumber was being used, was labeled a particular kind of pine. Of course, this, to a certain extent, is only human nature. We have gone a long ways in being trustful enough to co-operate with our immediate competitors. We have a long ways yet to go, even in this, and there are still enough untrustful, non-co-operative competitors in every region to upset the milk.

DIVISION OF TERRITORY.

I am a firm believer in the theory of a natural division of consuming territory for certain kinds and certain grades of lumber. Certain other species and certain grades of all species have a national market; but the lower grades and the rough building grades are so largely interchangeable in use that for these kinds of lumber to be shipped in opposite directions on the same railroad is an economical waste, for which the mill and the tree have to pay. One cent a hundred pounds saving in freight on 25,000,000,000 feet amounts to $5,000,000 a year to the industry. Other industries have this problem worked to a nicety. I do not believe you will ever find two carloads of salt passing each other in opposite directions. This is but one example of the gain through greater regional co-operation.

Some change in the organization of our National association may be required to facilitate this building up of mutual confidence between the widely separated individuals of the industry; but when this higher development of co-operation is reached we will have a new lumber industry, in which the owners of the trees and the manufacturers of lumber will get the return for their risk and for their skill, and for the real value of their natural resources.

ADVANTAGES OF WATER TRANSPORTATION.

One of the great lumber consuming markets is centered in Chicago. The shores of the great lakes add other great consuming centers, especially for low grade lumber. Under normal conditions we learn from the Forest Service ("The Wood Using Industries of Illinois," by R. E. Simmons) that timber seeks this market from Kentucky, Tennessee and West Virginia; the yellow pine, cypress and hardwoods of the southern states, the pines of Wisconsin and Minnesota. Lake Michigan, with its connections with the lakes, offers navigation for the forests of the lake states, and even those of western Canada. Here is the market we are all trying to get in on, and here are the great lakes furnishing unsurpassed navigation for the forests of Canada, even those of western Canada. The Forest Service gives us this information without comment. Then Mr. Hines, in his statement at Chicago, July 20, says: "The average cost of transporting lumber from the chief Canadian producing regions tributary to the great lakes, to the great manufacturing and distributing markets—Chicago, Bay City, Detroit, Toledo, Cleveland, Buffalo, Tonawanda and New York—is about $2 a thousand. From Minnesota and Wisconsin to these cities $5.50 to $6 a thousand. From the southern states the rate to Chicago is 25 cents, to Buffalo approximately 32 cents, or an average of $8.50 a thousand. From the Inland Empire to Chicago, 42 cents; Buffalo, 55 cents, or an average of $12.50 a thousand. All, as compared with $2 a thousand from Canada on kinds of lumber suitable for identically the same uses."

We are all concerned about this, but the task is so large we hesitate before it. The task is nothing more nor less than a national campaign of education. The hearings before the Federal Trade Commission have been the beginning of this campaign. We haven't reached one lumberman in fifty with this work. We haven't reached one timber owner in a hundred, but we have yet to reach all the lumbermen, all the timber owners, all the million of men who labor in the industry, all the people who use lumber. We must show all these people that what is for industrial prosperity is for national prosperity, and that one of the big determining factors of industrial prosperity in normal times is the prosperity of the lumber industry.

GOOD MARGINS TO WORK ON.

While, as I said at the beginning of this subject, lumber prices are not going to advance, I believe that it is evident, from what has been said, that there is an encouraging margin to work on between the manufacturer and the consumer.

1. Better marketing, through large units or selling agencies, direct from the manufacturer to the

Digitized by Google

retailer. Graded and guaranteed products manufactured intelligently to meet the consumers' needs.

2. Reasonable regulation of production.

3. The development and growth of markets nearer the mill.

4. The increasing world demand.

5. The development of enlightened public opinion, that will bring about still further governmental constructive aid in protecting our home markets, and a mercantile marine, and a foreign policy that will enable the American lumber industry to compete in foreign countries with the producers of lumber in other nations.

All this means our getting more for our lumber and more for our tree. Nothing in the solution of these problems carries any additional burden to the ultimate consumer. And all the infinite detail involved in this general problem of the lumberman getting what belongs rightfully to him is work in which lumbermen must learn to join forces.

about seventy-five large mills, with a twenty-four-hour capacity of dry pulp of over 7,000,000 pounds, and these figures are three years old. It is safe to estimate a daily capacity at the present time of 10,000,000 pounds. The output of dry pulp for the year 1916 will approximate 60 percent of capacity, and its value will be about $50,000,000, or about double the value of the lumber produced in Wisconsin. About $2,000,000 of this goes to the timber owner, but the profit on the manufacture of pulp and the profit on the manufacture of paper goes to others. Our own lumbermen in the lake states could see nothing in the tree but lumber, and when they completed harvesting their crop of lumber they sold their slashings and put their money in western timber.

WOOD PULP AS PROFITABLE PRODUCT.

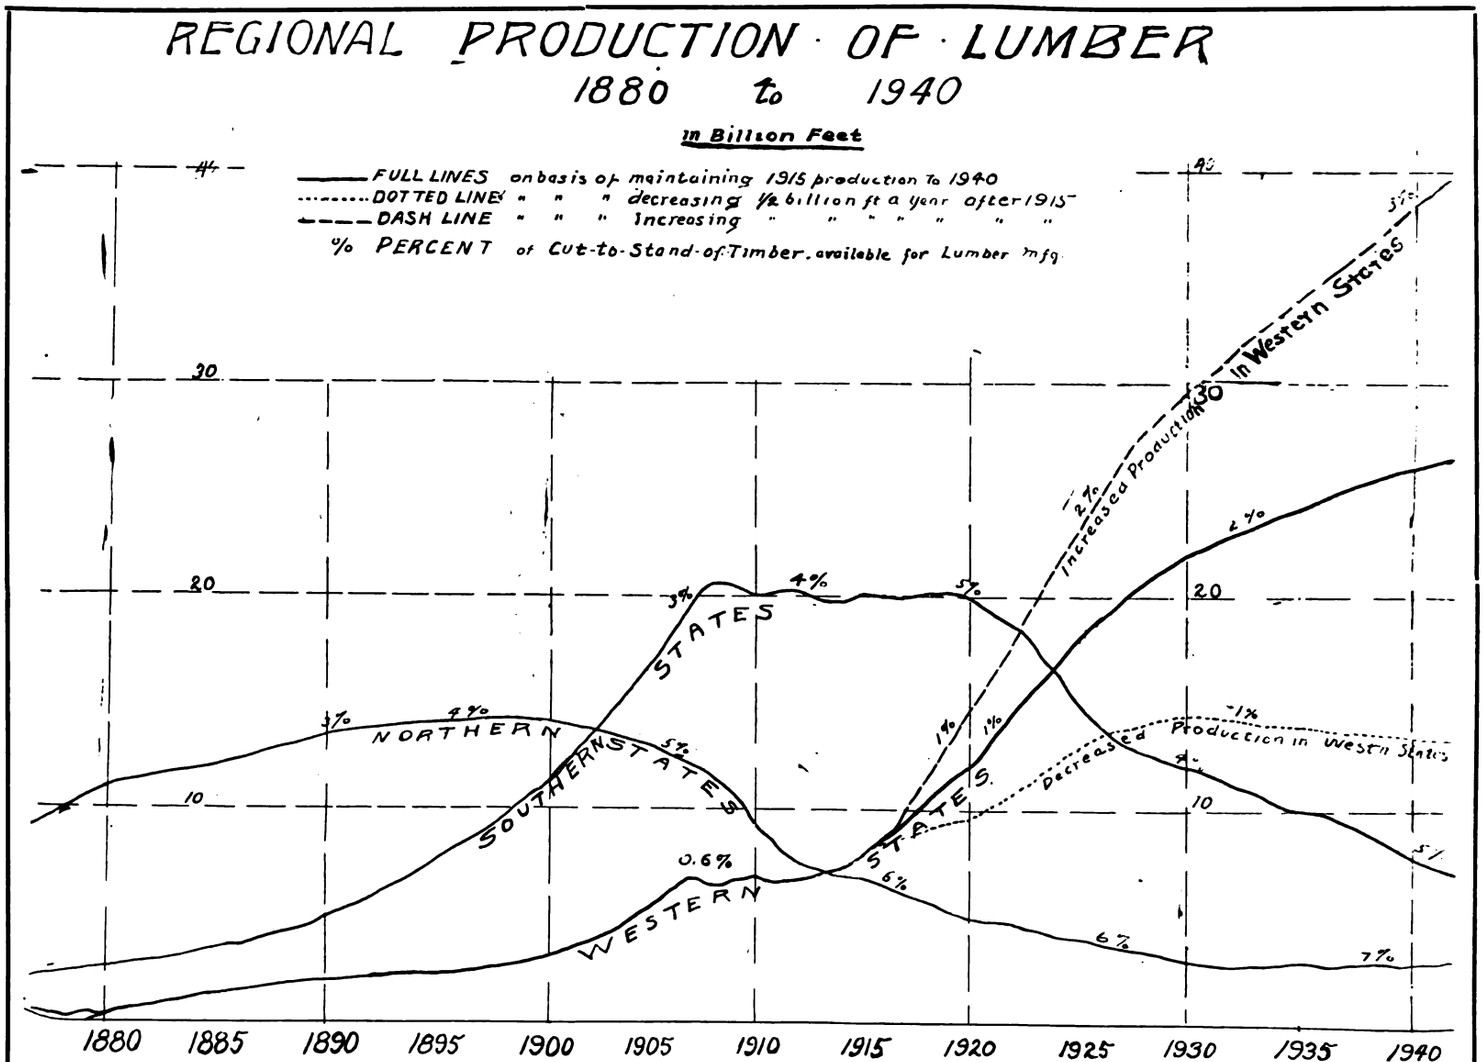
I look upon the paper pulp field as within the control of lumbermen and timber owners, and I

mill realization and decreased cost of production there is very much of a hopeful character, but that in each of these three fields we find that the satisfactory solution of the particular problems of the industry nearly all call for regional or national association effort.

The last few years have brought us generally to a realizing sense of the unfavorable conditions existing in the lumber industry. With prices for our product no longer advancing, with the consumption of lumber per capita decreasing from year to year, with taxes and manufacturing costs increasing, the outlook is discouraging—especially so here in the west, where the supply of standing timber in private hands extends further into the future. But, in spite of the situation in which we now find ourselves, I have faith in the outcome.

MR. GOODMAN TELLS OF CHANGE OF VIEWS.

Two years ago I was an extreme conservative in



THIS CHART REPRESENTS REGIONAL PRODUCTION OF LUMBER FROM 1880 TO 1915 AS COMPILED BY THE FOREST SERVICE AND FROM 1915 TO 1940 ON FORECAST BASED ON A STUDY OF FUTURE PRODUCTION IN THE SOUTHERN STATES BY CHAS. S. KEITH, AND A CONTINUATION OF THE DECLINE IN PRODUCTION FOR THE NORTHERN STATES ALREADY IN EVIDENCE. THE DASH AND DOTTED LINES SHOW HOW FUTURE PROSPERITY OR RUIN TO THE TIMBER OWNERS OF THE WEST IS DEPENDENT UPON THE SUCCESS OR FAILURE OF CO-OPERATIVE EFFORT TO DEVELOP DOMESTIC AND FOREIGN MARKETS FOR LUMBER.

TIMBER BY-PRODUCTS.

Nowhere in the whole of our outlook is there a more profitable field of endeavor than in the many promising uses that are being developed for the products of the forest other than lumber, or as we are accustomed to call them, the by-products of the lumber industry. The surprising feature of this recent development is that to a large extent lumbermen have been indifferent to it. Timber owners have given it little thought. But, on the one hand, a few earnest and scientific workers, men like Dr. Hermann von Schrenk, Howard F. Weiss, Dr. I. F. Acree, and others whose work have been so quietly done that we have not even heard their names, have found this line of work its own reward. And, on the other hand, almost unlimited capital is pushing into this field that lumbermen have neglected.

In the state of Wisconsin there are ten paper companies rated at over $1,000,000. There are

wish to point to our experience in Wisconsin again as a warning. The principal wood used for paper-making is spruce. The paper mills, through a collective buying agency, have paid for spruce pulp from $5.50 to $7.50 a cord during the past five years, leaving a margin for stumpage of from 50 cents to $2 a cord. During the present year the value of wood pulp has advanced from around $20 a ton to around $40 a ton, but the pulp buyers started talking $7.50 a cord for spruce pulpwood. This has since been raised to $10 a cord, or out of an advance of $20 a ton the pulp mills are giving the owner of the raw material $2.50.

The manufacture of wood pulp belongs to the timber owner and lumber industry. Closer regional and national co-operation will develop this profitable field.

CONFIDENCE IN THE INDUSTRY.

In considering the future of western timber it has shown that in increased production, increased

association work. I argued for cost accounting, efficient manufacture, the keeping of complete statistics of cut, shipment and prices; and when lumbermen began talking advertising campaigns and trade extension, I was with the objectors. I believed that these campaigns would stimulate the manufacture of lumber more than they would its use. The talk about substitutes never touched me. I used various kinds of patent roofing on the buildings we put up at Goodman, and slept peacefully at night in an iron bed.

They put me on the advisory committee of the Trade Extension department of the National association, and as I became familiar with the maiden efforts of this department I was not very enthusiastic. It seemed like going out into a field and shooting bird shot into the air, with the hope that some of the shots might hit a bird. But as this organization began to develop, as we began to get trained men, who were full of faith in the work they were doing, men like Mr. Sterling, Mr. Paul,

Digitized by Google

Mr. Sackett and Dr. von Schrenk—writers like Warren Bullock—as these men began to develop definite projects, that even in immediate results more than paid their own way, I became open to conviction.

Then, when those roofs began to leak that I had covered with several thousand dollars' worth of patent roofing, of the best advertised brands, with the most imposing guarantees, and the more we painted them the more they leaked, until we were compelled to put real shingle roofs on these buildings, I began to realize the bunco in the substitute proposition. When I saw all this talk we had been putting out about "wood where wood is best," get under the skin of the iron bed maker, and if I wanted to get a new iron bed to sleep in, I would find the iron pipes beautifully grained to represent Circassian walnut or red birch—then I began to see the new light. Now I thoroughly believe that the one great thing that is up to us all, timber owners and makers of lumber, is to educate the public (including ourselves) that among the many kinds of good building material, wood has and always will have its proper, legitimate and economic place. This is a job that stands on its own feet. It pays big dividends on the money you invest in it, and, that, as Edward Hines has pointed out, is what your contributions to trade extension work are—not gifts, but sound business investments.

When in a few short years the attitude of the public, and the attitude of the executive departments of our government has changed from distrust and antagonism to confidence and constructive aid, when co-operation in national problems has accomplished results like these, how can any timber owner or lumber manufacturer withhold his support, his time, and his money from such work?

FAITH IN UNITED EFFORT.

I want in no way to underestimate the gravity of the situation in our industry, nor to claim that regional and national effort is a cure for the ills that beset us, but I do believe that when all these problems are met with the whole, united, combined strength and wisdom of the forest and lumber industry of the entire country, they will eventually be solved; and I do have faith in the men of the industry, in their wisdom, in their desire to co-operate and to give: and I do believe that out of this united effort will come a sustaining confidence that will enable us to leave to the next generation a soundly established industry and a properly safeguarded natural resource.

THE BANQUET AT SPOKANE.

Great is the power of social intercourse!

Toastmasters are born. B. H. Hornby is a toastmaster of the highest order. We are very sure he did not attempt to make a pun during the entire evening.

The banquet was spread in the Elizabethan room of the Hotel Davenport on one of Mr. Davenport's wonderful wide tables, unlike any other banquet table the writer has ever seen in the west—or in many places in the east, for that matter.

At least fifty people were present, all the visitors, and all the members of the Western Pine Manufacturers' Association in town—some fifty in number,—and it is a recorded fact that every man present but one stood on his feet and made a talk of some kind.

Mr. McGoldrick was asked to sing a song and did not—BUT—made a felicitous talk.

George S. Long, of Tacoma, was asked to sum up the situation as he saw it in regard to the relations of lumbermen. Mr. Long said that there was a community interest which could not be divided by the character of lumber each person manufactured as between the species of lumber and he made an impassioned appeal for the Western Pine Manufacturers' Association to fulfill every request and requirement of the visiting people from the east.

He said that Mr. Downman deserved credit in a way that few, if any, association officials had ever deserved and that Mr. Downman's attitude went farther than loyalty and duty and had become patriotism.

Mr. Long rather excused the average business man for his active devotion to such work as Mr. Downman was doing, and told the story of the man who excused himself from apparent dereliction in association duty by saying that he really had no leisure in his life, all of his home leisure being taken up in running to catch suburban trains.

The toastmaster said that a gentleman was present for whom he had been several times taken, much he thought, to his own credit, and introduced A. W. Laird.

Mr. Laird was sure that everybody who had taken part in the meetings of that morning and afternoon had been deeply impressed. He had thought that he himself knew something of the work being done but his mind had already been disabused of that idea, and he said he considered it the duty of every lumber manufacturer in the Inland Empire to bend his back to the burden and in some way divide the onerous tasks of his brothers in the east.

He felt that today and the one to follow were only a beginning and he could even now feel the atmosphere warming up toward the visitors.

Mr. Hornby introduced T. J. Humbird, with a play on words, and Mr. Humbird endorsed everything and everybody—everything that had been said at the meeting during the day, and all of the people who had said it. He said there was no difference in people who seemed opposed each to the other usually, except the viewpoint, and as he expected the gentlemen who were making the tour would both give and take in all their relations to the trade of the west—much good should come of the undertaking.

Mr. Hornby introduced a pioneer, E. F. Cartier Van Dissel, of Spokane, who had always felt that the south country was far away, but would not—AGAIN—have that feeling. He told the story of the man who swam a turbulent stream once over and back and once over again, and, who, having thought he had enough of the pastime, concluded to remain on the side opposite to where he left his

CHARLES S. KEITH, OF KANSAS CITY, MO.

clothes, having been greatly discommoded in swimming the cold stream. The man concluded, though, that it would be foolish for him to stand naked in the inclement weather on the side opposite his clothes, and, so, therefore, "took the plunge" back to "clothed comfort." Mr. Van Dissel wanted to know why the lumbermen should stand naked and unprotected, and why they should not take the advice of Mr. Keith's plan and "take the plunge" to comfort and definite protection.

Mr. Hornby introduced Harry Miller, of Kalispell, Mont., and Mr. Miller showed that Montana occupied a really peculiar position, not being, by virtue of its freight rate situation amenable to the conditions which surround other sections, but that nevertheless Montana would co-operate up to the fullest measure.

Mr. Hornby introduced E. B. Hazen, of Portland, who displayed a very keen knowledge of all of the ideas that had been suggested during the day, and showed that he, at least, had all along co-operated with the people of the east and south. He assured the people present that Portland would co-operate fully.

Mr. Hornby introduced Judge Flewelling, who said he never had thought there was any reason why the lumbermen should not have co-operated years ago for the foreign trade.

He hoped that the ghost of fear was about to down. All these government bureaus and government itself were for our service, and there was utterly no reason why there should be any hesitancy on the part of business men to use these bureaus and to use the government for their own purpose.

Mr. Downman was introduced, and told the story of how, with a consciousness of the fact that lumber was entitled to a place in any building material show, he talked of the late meeting of the Society Advocating Fire Elimination, held at Cleveland last winter, and how the lumber people—notably some of the eastern associations of the National Lumber Manufacturers' Association and the National Lumber Manufacturers' Association itself—had asked for space at this show, secured it, and absolutely walked off with the honors in this camp of their enemies.

Mr. Downman told of the organization of the Louisiana Red Cypress Co., which had been in operation for several years and had been organized with the full knowledge of the attorney general of the United States—which fact he considered very significant, indeed, and of great moment in considering the "New Co-operation" upon which the Chamber of Commerce of the United States of America has worked for so long.

Others who spoke were Huntington Taylor, Charles S. Keith, J. P. McGoldrick, E. T. Allen, W. C. Ufford, R. B. Goodman, Paul M. Lachmund, W. S. Rosenberry, of Rose Lake, Idaho; R. L. Wilson, of Deer Park, Wash.; A. R. Turnbull, L. S. Case, W. D. Humiston, of Potlatch, Idaho; B. A. Johnson, of Chicago, etc.

THE SECOND DAY AT SPOKANE.

The second day at Spokane began with the reading of a remarkable paper by Charles S. Keith, of which we are privileged to print a short form herewith:

THE NEW CO-OPERATION IN ORGANIZATION. BY CHARLES S. KEITH.

We are all in hopes that these meetings on the Pacific slope between lumbermen from other districts and you gentlemen of the coast will mark an epoch in the lumber industry and prove to be a turning point in the matter of organization and closer co-operation, not only among those engaged in each individual branch of our industry but among all branches of the industry, one with the other.

THE THREE ESSENTIALS.

In my judgment, the first necessary step toward the betterment of the industry is ORGANIZATION; the second is the PLAN OF ORGANIZATION, and the third is the DEGREE OF CO-OPERATION.

The Southern Pine Association feels that it has solved the question of organization, inasmuch as it has departed from the old system of voluntary association; its income has been assured and is a known factor and can be depended upon in planning for the work to be carried out. It feels that in its plan of operation it is working along correct lines, but it has taken only its first infantile step, and as we progress the association should develop further and closer co-operation. Its board of directors is gratified with the support which it has received from the association subscribers, but we have not yet had the degree of co-operation which we are so earnestly working to secure.

PROVINCES OF THE NATIONAL.

The National Lumber Manufacturers' Association is properly the forum upon which our interests can get together on matters of national concern, and matters of national legislation. Its efforts before the Federal Trade Commission, we think, will be crowned with success. We regret that we cannot report to-day that the issue before the commission is accomplished; we will have to depend upon the future to demonstrate whether it will be or not. We are rapidly approaching the period when the commission's report will be out with its recommendations, and we hope that those recommendations will be for remedial legislation so that we may be permitted to co-operate more closely than we have been able to do in the past.

The people of the east, the north and the south against whose shores the waves of prosecution under the trust acts first spent their force, are like children whose fingers have been burned by the fire, and this condition you gentlemen on the coast have not had to contend with. It has been my

Digitized by Google

observation, in visiting this country, that the farther west one goes the broader appears to be the vision of men. I have often thought that this breadth of vision has been superinduced by your wide expanse of country, the great pioneer problems you have had before you, and the fact that your time has not been occupied with the petty things, the small things in life, but that you have been looking forward to the bigger and broader things of development and of enterprise, and this has left its mark upon your politicians as well as upon yourselves, individually, which has resulted in the fact that unwarranted activities of public officials have not been projected beyond the Rocky mountains.

CHANGE IN PUBLIC SENTIMENT.

Public sentiment has changed and the people now are beginning to realize that we had better have uncontrolled monopoly than unrestricted and destructive competition. This sentiment has expressed itself in many ways and particularly in the last two years in legislation, as an illustration of which we find that certain industries and certain peoples have been exempted from the effect of general anti-trust legislation; it has found expression in the shipping bill, where combinations legislation permitting co-operative agreements among all industries involving primary natural resources, which, with the force of public sentiment behind it, will probably be enacted into law. The question is, are we prepared to act upon it? Are we prepared to take advantage of this legislation when enacted into law? Will we give our loyal support to our organizations? Will we operate our business in the manner which the law may permit us to do, looking forward to the stabilization of the industry and the making of the same profitable instead of unprofitable under such conditions as have existed for the past ten years? What is the answer?

REFERENDUM ON CO-OPERATIVE AGREEMENTS.

I am bringing to you the message that the Chamber of Commerce of the United States of America will send out immediately a referendum on the subject of co-operative agreements among industries engaged in the conversion of primary natural resources into such forms as customarily first become available as commercial products, either as basic raw materials for other industries or for general utilization; that a committee of the Chamber of Commerce meeting with a committee of the American Federation of Labor jointly agreed to

I greatly doubt it. Taxes and interest are traveling faster than appreciation, and we are therefore confronted with the necessity of greater knowledge and better merchandising of our product. Can we merchandise our product individually with our present source of knowledge, which results in ignorant competition? I do not believe that we can. Each and every one of us must know what we are doing in order that we may act intelligently and we cannot know this without closer co-operation and without a better working out of accounting systems, distributing the average cost to the various items produced, establishing COST-LISTS instead of price-lists, agreeing upon the items which should be charged to costs, and the amounts that should be charged for each item such as stumpage, depreciation, improvements, betterments, and other items. These should be uniform; but can this be brought about except through closer co-operation?

We have the right to agree now on such items, and yet we are not exercising that right. We may be forced to do this very thing that we should do through action of the Federal Trade Commission in requiring that it should be done.

My thought is that if the proposition which we have in mind becomes enacted into law and we

Two Remarkable Reports of Western Association Committees

Below are two remarkable reports and, although tentative and the action of mass meetings of the Western Pine Manufacturers' Association and the West Coast Lumbermen's Association, they indicate a wonderful step forward in association work in the Inland Empire and on the Pacific Coast. The first was done at Spokane on November 14 and the second at Aberdeen, Wash., November 18.

The undersigned committee, duly appointed by the Western Pine Association to represent it in further steps and conferences looking to better organization of all manufacturing and timber interests for joint effort on behalf of the entire industry, hereby suggests to all other Pacific Coast associations the attached chart as a preliminary basis on which all agree in taking further steps with the National Lumber Manufacturers' Association and the local associations of other sections. We believe that while in thorough harmony with the aims of the Langille report, this plan will best deal, for the present at least, with timber owners in matters of collection and co-operation.

A. W. LAIRD,
A. W. COOPER,
T. J. HUMBIRD.

The above plan has been approved by a similar committee from the West Coast Lumbermen's Association. The plan as charted has been tentatively approved by the Western Pine Manufacturers' Association; the Idaho Timber Protective Association; the Washington Forest Fire Association; the Oregon Forest Fire Association; the Western Forestry & Conservation Association and the West Coast Lumbermen's Association.

The undersigned committee, appointed by the West Coast Lumbermen's Association to perfect a plan for better support and organization of the National Lumber Manufacturers' Association, has been instructed to proceed on the understanding that five cents per thousand should be contributed by our members for all purposes, including cargo inspection and rail inspection, supervision and branding (*) and that one and one-half cents of this should be passed on to the National Lumber Manufacturers' Association, provided all the latter's other constituents keep their implied agreement to do the same. This one and one-half cents is to cover our present dues to the National Lumber Manufacturers' Association, also our contribution to the work of its trade extension department and requires an increase of our present local dues from one and one-half to five cents per thousand.

We further indorse the charted plan proposed by the Western Pine Manufacturers' Association for co-operation between timber owners and manufacturers in all matters of common interest and providing for contributions by timber owners, through their organization, toward the work of manufacturers' organizations for market extension.

A. L. PAINE,
E. G. GRIGGS,
E. B. HAZEN.

(*) It is thought that actual inspection of water shipments and supervision of rail by supervisors residing at each plant could be assumed out of this fund, while rail shipment inspectors would be employed by the bureau with actual time of inspector invoiced to the mills.

and co-operation are legalized even to the fixing of rates, predicated only upon the fact that they shall have the consent of the shipping board—and the shipping board's consent may not be withheld except when shown discrimination as against shippers.

We further find its expression in the formation of the federal reserve banks, where our banks have been forced into this combination. We find its expression in many other ways and we will find its expression in regard to NATURAL RESOURCES, and it is to be hoped that finally it will find its full force and effect upon all business in the United States.

A QUESTION OF PREPAREDNESS.

This attitude is predicated upon experience and is being crystallized into legislation that is constructive, rather than destructive, in character. Business has needed a wider latitude than it has had in order to work out its salvation, which will surely come. With all of this previous legislation there will come up before congress probably during the coming session the next logical step in seek to secure such remedial legislation. Are we prepared to get behind this movement and to render such assistance as we can toward the securing of favorable consideration of same by congress? Having enacted it into law, are we prepared, then, to go forward and put into effect the character of agreements that will stabilize our business; or, will we continue to run the course which we have heretofore run, headed as we have been and are now headed towards the courts of bankruptcy?

WHY WE HAVE NOT PROSPERED.

Every industry in the United States has prospered but the lumber industry, and WHY? Because, in the first place, we do not know that which we are doing. We do not know what the product we are making costs as an average, in many instances, and none of us know the relation of that cost to the various items which we produce and sell. Can we merchandise our product in any such haphazard way, and will the advance in the price of standing timber in the future, as it has in the past, carry our load? Gentlemen, are thereby enabled to bring a contract of ten years' duration to the members of the industry to sign, and the said contract shall be legal and enforceable under the general law of contracts, will we do so? We should be able to work out our problems, with the National association acting as an equalizing power and bringing our interests closer together on common grounds, a forum through which we may work our national existence and exchange our best thought.

COMPETITORS BUT HAVE COMMON GROUND.

Many branches of the industry have nothing in common; but those of the west coast and the south have many things in common. Why should we be fighting one another on the question of freight rates? Will a 5 percent reduction in freight rates extend our markets for consumption in the face of the fact that we should have 25 percent to 30 percent increase in our prices? Would it not be better—if congress should give to us the right to do so—to establish differentials in values based on differentials in cost and qualities; to unify our grades as far as possible in

Digitized by Google

order that they might be more properly competitive, and to work upon all lines jointly that we can where our joint interests lie? We must recognize the differences in interest in freight differentials as between the industries, and I suppose that you on the coast have the same situation that we have in the south where said differentials exist within our own industry. These points of difference will always exist and should not interfere with our greater endeavor. We must recognize the rights of each branch of the industry and those within each branch to work for what they consider their individual interest and not allow it to interfere with our broader co-operation effort. Our rivalry should be friendly and not antagonistic. We in the south feel that your interests and ours are identical in the market. We are competitors, it is true, and we always will be competitors, but why should we not be friendly competitors? Why should we engage in cut-throat competition, trying to drive each other out of business? That cannot be done and is not necessary. The south does not want this and I am sure that the west does not. What we must have is a common understanding of each other and realization that we are both human; that our interests are largely mutual. We are both working for the industry, as such, and not for ourselves; that is the thought we want to develop; and if we proceed along this line I am satisfied that we will have hearty co-operation from the members of our industry.

SOUTHERN PINE ACCOMPLISHMENTS

To-day, in the Southern Pine Association, we have twice as much production as we formerly had in the old association. We have at least six-fourteenths of the total production, and I am satisfied that if we secure the remedial legislation which we are working for we will be able to secure more than one-half of the entire production; and, gentlemen, when you consider that that means practically every large producing unit in the south, or practically every producing unit of 50,000 feet per diem capacity or over and will represent practically only 300 mills against the 17,359 mills in the industry, you can readily see the impossibility of our securing any further co-operative effort from the smaller units in the industry.

CONFERENCE WITH LABOR MEN.

Now, gentlemen, I again wish to direct your attention to the legislation in which we are so directly interested. On the fifth and sixth of May, of this year, in Washington, D. C., at the headquarters of the Chamber of Commerce of the United States of America, there was held a meeting of historical importance. For the first time in the history of the great industrial movement did the representatives of capital and labor together sit for the purpose of studying the economic effect of federal legislation on the course of business and labor.

After two days of conference, these committees reached an agreement which is covered in the following statement, to-wit:

> "Because of the necessity to save human life and to conserve the natural resources of the country, we agree to seek to secure remedial legislation to permit co-operative agreements under governmental regulation in industries involving primary natural resources."

In order that the thought of the committees might be crystallized into concrete form, a subcommittee was appointed for the purpose of drafting a bill, and such a bill was drafted and agreed to, not with the purpose of introducing same into congress, but, as stated above, merely for the purpose of crystallizing the thought.

A REFERENDUM ON LEGISLATION.

The committee has made its final report to the board of directors of the Chamber of Commerce of the United States of America, and there is being prepared at the present time a referendum which will be sent out to the various Chambers of Commerce members of the national chamber for vote on the question of the committee's recommendation, which is to the following effect, to-wit:

> That there should be remedial legislation to permit co-operative agreements under governmental supervision in all industries which are engaged in the conversion of primary natural resources into such forms as customarily first become available as commercial products, either as the basic raw materials for other industries, or for general utilization.

I wish to urge that every lumberman, as well as every coal operator and other producer of natural resources, will use his efforts in his local Chamber of Commerce to see that the proper vote is cast upon this referendum, and if the Chamber of Commerce of the United States of America is committed, through the vote taken, on this referendum—which I earnestly hope it will be—then it will be necessary that congress shall be properly informed as to the necessities for this character of legislation, and this can only be done through the individual efforts of those engaged in these industries with their representatives in congress.

RESULTS THAT ARE HOPED FOR.

Gentlemen, the vision that I have sought to unfold touching the future of our industry, as the same relates to this legislative program, lies in the womb of the future. It is our earnest hope that this legislation will be realized at the incoming session of congress; but if, for any reason, it should be delayed, I desire to impress upon you this further suggestion: That this delay should not discourage us, because I have the greatest confidence in the good sense and the wisdom of the Federal Trade Commission. I believe that the report that the commission will hand down in the near future will outline many opportunities for closer co-operative effect.

Naturally, it would be improper and impossible at this time for us to undertake a forecast of what the commission will say. We have placed all the facts before it, and having faith in the

A. R. TURNBULL, OF BOWDEN, N. C.

commission's sanity and justice, as well as in its loyalty to public interests, we in the south feel that the commission will so express itself as to permit a larger co-operative effort than we have heretofore deemed possible.

Therefore, in outlining, as I have sought to outline, this new constructive legislative plan, I do not wish in any way to indicate to you that we are without hope, even in the event of failure of such legislation, because, under the guidance, supervision, and with the help of the Federal Trade Commission, the industry has much to hope for. All depends on ourselves. We now must realize that the attitude of official Washington is friendly rather than antagonistic. Will we avail ourselves of this hopeful atmosphere? As suggested it is up to us. Can we rise to the heights and become real merchants, or will we continue the foolish game of squandering our resources and making ourselves weary in futile strife?

LAUDATION OF MR. DOWNMAN.

Before closing, I wish to recognize on the part of the Southern Pine Association and all the subscribers thereof, as well as other members of the industry in the south who are not subscribers of our organization, the valued and much appreciated work of our capable and worthy president, Mr. Downman, before the committees in Washington in the consideration of the federal income tax. Such work as this shows the value of the national organization, and such work cannot be accomplished except through the unselfish and constant efforts of such a man as our honored president.

REQUISITES OF SUCCESS.

Gentlemen, I want to again urge upon you the thought, as I have heretofore stated, that there are three requisite points for the successful conduct of our business, the *first* of which is organization; any organization is good, but some are better than others; *second*, the plan of organization, in order that the organization may be perfected; and, *third*, the degree of co-operation in the carrying out of the plans of organization. We should first have organization, and our plan of organization should be such as to enforce co-operation, even to the extent of penalizing those who have agreed to enter into same, for failure to comply, in a monetary way.

Gentlemen, if we can do this—and can do it legally—we may hope, through education, first, within our own industry and secondly, with the public, to put our industry where it properly belongs, raising its standard of efficiency, of morals, and of earnings.

It is not only necessary to organize and develop plans of activity, but we must actually give our time and study in active co-operation to bring our efforts to a successful issue.

Gentlemen, I wish to thank you for your attention, and I desire to add that I earnestly hope that as men within this industry, one of the greatest in national importance in the point of capital invested and labor employed, will exercise rare good sense, judgment and unselfish effort to the end of successful stabilization of our business, and that we may be looked upon again by other industries in the country as being successful and prosperous business men. I hope that in the future we may come into closer relations in our business activities and in our personal contact.

This affair having been passed upon the west—or rather the Inland Empire—came to bat for the first time since the inception of the conference at Spokane.

H. D. Langille, who by his "Nation-Wide Committee" report, printed in the LUMBER WORLD REVIEW on October 25, and analyzed in the LUMBER WORLD REVIEW of November 10, and endorsed by some of the most prominent manufacturers of the United States, made a brief address.

Mr. Langille had prepared a few notes only, and made a very clear and lucid exposition of his idea, tracing it back to its inception at San Francisco, and presenting a short form of his remarks to the meeting at Spokane, in line with his instructions as chairman of a committee appointed by the Western Forestry & Conservation Association.

Mr. Langille, for the first time in any talk on this subject, made himself absolutely clear as to the various branches of the trade which should be associated together.

It appears he never has had any idea of creating something in which all lumber associations in the United States of any name or nature might have shelter, but maintains that the newly proposed organization should be made up of those associations or interests directly connected with timber and its refinement into all kinds of merchantable products, and, that, of course, the body would contain timber associations; independent timber owners; the logger; the manufacturer; the shingle associations; the box associations; the creosote business—presumably the Wood Preservers' Association of the United States; the stave interests, etc.

Mr. Langille said: "First the tree shall pay—and beyond that each process of refinement."

He didn't care what the association should be called. That was the least of it. He advocated very earnestly the idea that the body should be organized first in the fullness of its purpose, and that organization would work out the ends. Roughly, he said, he would divide the efforts into four branches, namely, a bureau of "Organization and Administration," run by a secretary and treasurer; a timber branch, attended to by an expert to look after taxes, fire protection, and all that sort of thing; a third branch, under an expert, looking after all the wants of the manufacturers in all lines; and a fourth branch, a department of "Advertising and Promotion."

He thought that, as it was said at the banquet the night before, "Sentiment is grown ripe—the time is here."

After Mr. Langille talked, Mr. Downman was called upon to explain trade-marking conditions in the east, which he did.

He said that the McDonough trade-marking machine was in commission at Bowie, La., in the plant of the Bowie Lumber Co., and that it worked perfectly.

The association then got back to a discussion of the Langille report.

George S. Long talked particularly about organization, going back to that famous first meeting

Digitized by Google

on inspection at the Hotel Minnetonka, Lake Minnetonka, Minn., where the necessity for the inspection of lumber in an association way was first discovered, and when the result of an investigation showed that on a basis of inspection on some crude rules of the day and time the percentage of excellence ran from 40 below par to 45 above par—some sixty firms considered.

Mr. Long said that all associations and all organization work were based on a desire to make a uniform product of lumber, that the manufacturers might get a uniform price for it. Lumber organizations have gotten away in recent years from local problems, and were now wrestling with the effort to extend the trade, ascertain new uses for wood and to generally work out new and practical ideals.

Ideals must come first.

Mr. Keith told a wonderful story of the activities of the Southern Pine Association, and how it certainly had "cleaned house." One item of the work during the last year of the association had been the 103 committee meetings.

His association had made no shingles, but it had been helping to fight the battle of shingles. He thought that the lumbermen of the United States would ultimately have to have a national laboratory of their own—this without casting any reflection on the Forest Products Laboratory's management.

He never had been in favor of National advertising, so-called, but believed that each association should do its own advertising. He illustrated the difference between activity in regard to the laying of wood block pavement in the state of Missouri and in the state of Washington, illustrating that it was simply a matter of getting busy with the proposition to accomplish everything necessary.

Mr. Downman here illustrated what Dr. Hermann von Schrenk had, as an enginering expert, accomplished along the line of a shingle paint or a shingle stain, that had seemed to solve the problem. At various other points on the tour Mr. Downman went into this question very deeply.

E. T. Allen said that the proposition to put the timber land owner in with this movement was altogether the most difficult, and that it was evident to him that the present machinery of timber land organizations could be utilized to advantage; but he was not making the lumber manufacturers any kind of a proposition in that direction, but only to show a disposition to work with them.

He said that the problems of the timber land owner were so different from that of the lumber manufacturer that a separate brief had been necessary to be filed before the Federal Trade Commission in the interest of the timber land people—and yet he believed that the interests of the timberman and the lumberman were close enough so that they might work together.

R. B. Goodman addressed himself to the subject, and talked especially about the wonderful things that can be done in National association work in regard to the spreading of legitimate information among the officers of the cities of the nation in regard to the requirements and uses of wood which would help to secure appropriate building codes.

COMPLIMENTED WITH A DINNER.

It was the regular day of the Chamber of Commerce luncheon. The visitors and members of the association were invited by the local people to participate in this dinner.

A very amusing episode occurred in connection with the talk of Charles S. Keith. He had been preceded by a gentleman who told of a marvelous discovery of natural gas in Washington, which was going to work a revolution in fuel, and by a gentleman, Professor Lindsay, who had made a statement that there were 190,000,000,000 of standing timber west of the Cascades, and that the eastern country was practically cut out.

Mr. Keith remarked that he was a coal man and a lumberman, and that he felt greatly bereft at having both branches of his business eliminated in that territory in the last thirty minutes.

THE LAST SESSION AT SPOKANE.

It was developed in the afternoon, when the last session was worked out, that if the Western Pine Manufacturers' Association would assess themselves a cent and a half a thousand on the product in favor of the National Lumber Manufacturers' Association, that this, with the co-operation it should receive from all the OTHER associations, would produce $210,000 a year. Mr. Downman thought that amount of money was needed.

He recounted the history of the raising of the first fund of $56,000 per year for five years, by the subscription method, the length of time it had taken, and the fact that that method had possibly produced its maximum.

The sum and substance of the discussion resulted in the passing of a motion, unanimously, that a committee of three be appointed to work out a plan, which the Western Pine Manufacturers' Association would adopt, which committee was instructed to report an assessment of a cent and a half per thousand feet on production. The motion was made by A. W. Laird.

The committee appointed by Chairman Hornby consisted of A. W. Laird, A. W. Cooper and T. J. Humbird; and after the adjournment of the meeting the committee got together and recommended a report, which we print elsewhere in this article in black-faced type, along with a similar committee report of the West Coast Lumbermen's Association.

During the discussion in the afternoon, Charles S. Keith, president of the Southern Pine Association, and A. R. Turnbull, president of the North Carolina Pine Association, each promised to do everything in his power to get his association to raise a like amount for the National Lumber Manufacturers' Association. The meeting adjourned.

THE FIRST DAY AT SEATTLE.

The party left Spokane over the Northern Pacific railroad on the evening of November 14, arriving at the New Washington hotel, Seattle, on the morning of November 15.

At 10:30 o'clock on that day automobiles were provided by E. G. Ames and Charles E. Patten, of Seattle, and the party was taken to the Cascade Club, Everett, Wash., where the members met informally all the manufacturers of lumber and shingles at that thriving seaport. At noon they were served with an informal luncheon, and in the afternoon were taken to the new mill plant of the Weyerhaeuser Lumber Co., by W. H. Boner, where they carefully looked the plant over, marveling at the perfection of it. The party was escorted about the plant by Superintendent Rogers, W. H. Boner and F. E. Weyerhaeuser.

We have neglected to say that before going to visit the Weyerhaeuser Lumber Co.'s plant at Everett, J. H. Bloedel assumed the chair in the parlors of the Cascade Club, and introduced all four of the distinguished visitors, Messrs. Downman, Turnbull, Goodman and Keith, whereupon each in turn gave an outline of the ideas he had expressed at Spokane during the two previous days.

THE NEW MILL OF THE WEYERHAEUSER LUMBER CO.

At the Weyerhaeuser plant the party saw one of the finest lumber manufacturing operations in the great west. Mill "B," the new plant, is located on a 100-acre tract of land, near the mouth of the Snohomish river, and is tributary to the lines of four transcontinental railways. All the buildings in this plant are erected upon piling capped with concrete. The yard was filled with sand from the river, distributed by a large hydraulic dredge. The power is generated by four 500-horsepower Sterling water tube boilers, and the fuel is sawdust, automatically conveyed to the fire boxes. There are two Parsons type turbo-generators of 3,000 kilowatt capacity, which radiate electric motive power to various parts of the plant. Mill "B" has one 11-foot and one 9-foot band, and cuts lumber at the rate of 120,000,000 feet a year, carrying stock on hand of from 40,000,000 to 50,000,000 feet. Mill "A," which was erected several years ago, has an output of 80,000,000 feet of fir each year, and carries a stock on hand of from 25,000,000 to 30,000,000 feet. The visitors greatly enjoyed the visit to these two mammoth modern plants. Mill "B" was started only a year ago, and is a splendid lumber institution. At the time a full description of the plant was published in these columns.

THE DAY IN TACOMA, WASH., NOVEMBER 16.

Tacoma had kept a part of its program to itself. The lumbermen there had previously announced a luncheon at noon and a general meeting in the afternoon, but at the luncheon it was announced that there would be a banquet in honor of "R. H. Downman and associates" at the Union Club, Tacoma, in the evening.

The noon luncheon was exceedingly enjoyable, and was in the hands of Frank B. Cole, lumber trade journal Editor Emeritus, who presided as toastmaster and addressed the lumbermen at various times in scathing, sardonic or humorous ways, as seemed to best fit the individual, and which will long be remembered. This banquet was held in the dining room of the Tacoma Commercial Club.

Mr. Cole ventured a few bon mots concerning the weather, and introduced Major Everett G. Griggs, who welcomed the visitors.

Charles S. Keith was introduced, and made a comparative statement concerning the lumbering methods of the west and east.

Toastmaster Cole referred in a sweetly insinuating manner to some one or other who had brought along a minister to give him confidence, and Mr. Bloedel, being next introduced, took up the cudgel for the ministerial presence. Mr. Bloedel referred to the horizontal reduction in the use of lumber per capita in the United States, and said that it was a significant fact, and it was known that the reduction had been as great as from 550 feet board measure per inhabitant to 375 feet per inhabitant. The lumbermen have sat idly by and allowed this condition to advance upon them in a manner that was a great reflection on the trade. He referred to the fact that lumbermen had only recently ascertained the importance of the foreign field, but all that was now about to be changed.

Mr. Cole entered into a description of Mr. Downman's home town, and averred that he had seen a couplet emblazoned on a tombstone in the Delta City, as follows:

"Here lie me, and my two daughters,
Because of drinking mineral waters.

If we had stuck to Epsom Salts
We wouldn't a been in these damn vaults."

Mr. Downman admitted to a residence in New Orleans, with no knowledge of its cemeteries, but a certain feeling that it would be a long time before mineral water would be the only thing to be had to drink in New Orleans. Mr. Downman was not altogether sure that visitors in the state of Washington could be considered especially handicapped for lack of beverages, and related an instance.

At this point Mr. Downman related the story of "pecky cypress" and its rapid advance into favor. It was one of the best stock stories of the trip.

He explained what "pecky cypress" is, something apparently on the surface worse than a No. 5 board, honeycombed with holes—put there no one apparently ever knew why or how—and which Mr. Downman had for many years been glad to sell at $3.50 a thousand, in order to clean up his yard. This condition, however, had changed. Architects had suddenly hit upon "pecky cypress" as something which was so odd and peculiar that if it was stained a gray color it would be very artistic. Henry Ford had recently had his "sport" room fitted up with "pecky cypress" and he actually expected a demand to spring up for "SELECT "Pecky" the cypress manufacturer undoubtedly being compelled to furnish the very WORST lumber of the kind that he could find in his yard under that grade. He had no doubt but what the stuff would soon bring $40 or $45 a thousand.

D. O. Anderson, of Marion, S. C., had joined the cypress association at the recent Jacksonville meeting of that body, and Mr. Downman, realizing that Mr. Anderson was but a small manufacturer of cypress along with his otherwise big business in other woods, went to him after the meeting and asked him how he happened to become a member of the association, whereupon Mr. Anderson told him that he wanted to run with a set of people who were clever enough advertisers to so popularize their wood as to enable him (Mr. Anderson) to sell all his "pecky cypress" recently at $11.50 a thousand.

Mr. Downman talked to the question of advertising, telling the west coast lumbermen that they simply would have to come to the front on a proposition of raising the necessary money. He referred especially to the co-operation which existed now between the government and the lumbermen, citing several instances of importance. The government is holding out its hands to the lumber industry, and the lumbermen had never before had such an opportunity for advancement—but it needed money.

Mr. Cole introduced Chas. S. Keith, of Kansas City, referring to the fact that the man who had created the park system of Kansas City had come west and created the park system of Tacoma.

Mr. Keith replied very happily to Mr. Cole's badinage, saying that the lumbermen should have and must have regulated competition, and, whether

Digitized by Google

they wished it or not, it was coming to them, anyway.

Mr. Keith devoted himself to a brief resume of the activities of the Chamber of Commerce of the United States of America, of which he is a director and referred to a referendum which was to be sent out very soon, and outlined the general policy of referenda.

Mr. Cole felicitated Mr. Turnbull on driving a Ford, and Mr. Turnbull admitted that he did; said that he was on this trip only because he had said he would go if Hughes was elected, and that when he left his home in Norfolk, Hughes had been elected, and that he trusted Mr. Hughes would allow him to finish his trip, by not admitting defeat until the trip was finished.

Mr. Cole—after Mr. Turnbull had finished—had something to say about having served twenty-five years as "a general liar for the trade," but that he had retired. He recalled to his audience the fact that during the last six or seven years there had been great mortality in the ranks of lumber trade journalists, that Judson, Defebaugh, Gibson, Barns and Crary had gone over the Divide, but he didn't see just what act of Providence was allowing Bolling Arthur Johnson to remain alive, and he asked George S. Long to respond to that toast, whereupon Mr. Long said that it might be that Mr. Johnson was spared so that by his truth-telling he might counteract the quarter of a century of misrepresentation of F. B. Cole.

Mr. Long reviewed the conditions in association work, and fully endorsed the attitude of the eastern, northern and southern lumbermen who were that day the guests of the Tacoma lumbermen.

Following the banquet came the general meeting of the trade at Tacoma.

THE GENERAL CONFERENCE AT TACOMA.

The conference of the eastern evangelists and the western converts-prospective at the rooms of the Commercial Club at Tacoma on the afternoon of Thursday, November 16, was one of the most largely attended sessions during the entire trip of the lumbering "Billy Sundays."

The rooms were filled, nearly every person in the room being a trained, experienced lumberman, able to follow the papers of the visitors and interpret the unspoken deductions of the easterners in their veiled prophecies of the future.

The conference was preceded by a brief session of the west coast members, at which the car shortage was discussed, and the visitors told the westerners of their observations and experience in the east in the last few weeks with this problem.

Then the "Billy Sunday revival," as the conferences are coming to be known, was started in earnest, with President J. H. Bloedel, of the West Coast Lumbermen's Association, presiding.

Mr. Downman gave his review of conditions essentially as presented at Spokane, and as presented elsewhere in full, adding that the "government of the National needs a little more grease. No plant can run without lubricant, and this plant of ours, this trade extension movement, must have money for its gears."

Mr. Downman showed the results of tests of fire retardant paint upon shingles, with a test shingle, hardly scorched, though subjected to 850 degrees heat for 12 minutes from a torch held less than an inch distant.

Mr. Keith took up the prospects for future co-operation with governmental agencies, for the conservation of human life, of natural resources, and the necessity for legislation permitting co-operation in industrial effort.

Mr. Goodman spoke briefly, outlining his ideals of national trade expansion, reserving his detailed talk on the future of western timber for the Friday session at Seattle.

It was at first suggested that the Keith paper be discussed immediately, but it was found to be so late that the lumbermen were asked to take up the question at the Seattle session in a questionnaire, with Mr. Keith on the floor to explain his report, or to answer objections. The question of co-operation with labor, for the securing of proper industrial laws, stirred considerable interest in the west, on account of the I. W. W. activities, but the discussion, in view of the prospective elaboration of the project later, was left for Friday.

The easterners had up to this time seen that the westerners were in doubt as to their ability, in the state of the industry, to do much more for the advancement of extension work. The need for such extension was agreed upon in many of the rapid-fire talks of the west coast men, but the surprise of the session came when Major Everett W. Griggs rose to move that the westerners appropriate 1½ cents for National trade extension. This was unexpectedly favorable to the evangelists, but it was thought best, even by the easterners themselves, to have a little more thought given to the question, so with the understanding that such an appropriation was to be made, through the increase of the West Coast allotment to its own treasury on a production basis, President Bloedel appointed a committee to devise the best method for financing the carrying out of the Griggs motion.

THE BANQUET AT TACOMA.

Following the general meeting at the Commercial Club, the visitors were taken to the St. Paul & Tacoma Lumber Co. plant by Major Griggs, in the hour remaining before the banquet. On the way to the club a few moments were given to a reception at Major Griggs' home.

The dinner at the Union Club, attended by fully 100 representative lumbermen, was one of the notable lumber gatherings in Tacoma's history, it was said. It was a most representative gathering, with all the veterans of the west to extend the glad hand of welcome to the visitors. Wit and humor, interspersed with serious discussion of industrial problems, made the program varied.

Major Griggs presided—after the visitors had been served with a mallard duck dinner, embellished with wild rice, a most delicious repast, for which the *piece de resistance* (said mallards) were provided by the guns of two of the lumber fraternity.

Mr. Downman spoke of varied industrial prob-

lems, and declared that the cypress manufacturers had forced other manufacturers not in the association to join in order to get the benefit of the advertising of the association of trade-marked goods. Only the association members, he declared, could use the trade-mark. "Let the other fellows stand out of the rain, under your umbrella for a while," he said, "so that they can learn what an umbrella is like. Then, if they don't come across and help pay for the umbrella, push them out into the rain."

It was an evening of such pointed, wittily-sharpened thrusts at each other in which easterners and westerners alike participated.

Not the least interesting event of the evening was the talk by Henry Hewitt. "These fellows come here from the east," he said, "and think they are lumbermen. They may know how to saw up little TOOTHPICKS of trees, but the real lumber is here. Let them look around and see what a problem we have. We have a stretch of 1,200 miles of timber land in the Cascades, and 800 miles long in the Rockies, and this great belt is 200 miles wide; and has a stand of timber of 100,000 feet to the acre.

"You know, I thought maybe these eastern fellows were snooping around looking for a little timber. We have problems that we can't handle. We have timber to sell if they want some, but somehow they don't seem to be just looking for our timber.

"This is a big thing, this trying to improve this industry, and if we have to put up money to get in out of the wet, why we'll just have to do it."

All the visitors spoke briefly, and the evening was closed with a talk by George S. Long, who declared his faith in the future. "We have too wonderful timber, too wonderful an industry, too highly perfected a production machinery," he said, "to let the business fail from lack of proper merchandising methods. We have a 'daisy' of an industry, to use a slang phrase, and let us show that as merchandisers we are 'daises' also."

These serious remarks on the industry were punctuated by side lights of story and reminiscence—just enough of the lighter touch to bring the real points of the industry into the spotlight, making the whole picture of the evening a perfect composition.

After the dinner the visitors were taken back to Seattle on a chartered electric car, as the guests of the electric company and the West Coast lumbermen hosts.

THE LAST DAY'S CONFERENCE AT SEATTLE.

A meeting of the trustees of the West Coast Lumbermen's Association was held in the morning of November 17, and the problem of sending five or six representatives of the American lumber trade to Europe under the auspices of the department of Foreign & Domestic Commerce, was brought up.

Legislation was endorsed broadening the influence of the powers of the Interstate Commerce Commission, and a tentative proposal was endorsed for minimum as well as maximum rate control and the establishment of regional interstate commerce boards was referred to a committee for further consideration.

Seattle bankers and prominent business men met the visiting delegation of lumbermen at a luncheon given at the Rainier Club by J. H. Bloedel.

Mr. Bloedel presided at the general meeting of the West Coast Lumbermen's Association on the afternoon of Friday, November 17, at the New Washington hotel, and subjects discussed were somewhat similar in character to those that have been made parts of other programs—so much so that we will not endeavor to print in detail the various talks. The attendance was about 75 in number, and the visitors all talked.

A. R. Turnbull, president of the North Carolina Pine Association, gave a ringing speech on advertising.

R. H. Downman talked of the National Lumber Manufacturers' Association, and Mr. Keith addressed himself directly to the affairs of the Chamber of Commerce of the United States of America.

Mr. Turnbull made a very notable statement which must be quoted. "There is no question," he said, "that if a group of lumbermen were to organize a selling agency exclusively for foreign trade, and go after business vigorously, they would not be interfered with by the government. Yet, there is a lingering doubt as to the legality of such organizations in the minds of so many lumbermen that little is likely to be done, unless congress definitely legalizes selling agencies for foreign business. This was the design of the Webb bill. This measure is scheduled to be taken up when congress reconvenes in December, and every lumberman in the United States should support the efforts of the Federal Trade Commission and the Bureau of Foreign & Domestic Commerce, to get this bill speedily enacted into law.

"The Webb bill authorizes co-operative selling agencies for export trade. Some of our counsel have advised that such a combination is not illegal, if formed for the purpose of extending our foreign trade, and only to be used for that purpose. Other counsel have advised members of our organization that such combination is illegal; and consequently in view of the doubt which exists, it will be impossible for us to operate safely under such a combination until the Webb bill is enacted into law."

F. E. Weyerhaeuser, of St. Paul, spoke of the splendid results accomplished by the trade extension department, notwithstanding the lack of support given.

"One of its first efforts," he said, "was to create a reliable series of reference literature upon the use of lumber by the architect, the engineer, the contractor, and the builder. The engineering bulletins upon structural timber and mill construction buildings have been gladly received and used by architects and engineers everywhere, who have long wanted and been unable to get this kind of information upon how to use timber.

"There are more than 100 cities in the United States of more than 50,000 population, in scarcely one of which is the building code worked out upon the basis of a right and intelligent use of wood.

Digitized by Google

These cities have been a big market for our products in the past. They will afford a very small market in the future, unless we put the use of our materials upon the same scientific basis as that of other materials, and actively participate in the framing of building codes to see that our products are given the consideration their merit warrants. Already the National Lumber Manufacturers' Association has been of material assistance to several cities in the revision of their building codes.

"Closely connected with the use of lumber in cities, and especially within the fire limits of cities, is that of making wood, and especially shingles, more fire-resistant. The elimination of shingles from many communities has been more hysterical than reasonable, due to an insidious cultivation of the idea that 'wood burns' by interests which have much to gain. We must show that the fire loss of the country is due very much more to carelessness, methods of construction, and combustible contents, than to the materials of construction themselves."

R. B. Goodman read a short form of his paper on western timber, following which the paper was discussed briefly.

At the end of Mr. Keith's talk D. E. Skinner, of Seattle, rose to champion non-regulation of the lumber industry, and he and Mr. Keith entered into a debate of the question, in which it seemed, to an unprejudiced observer, that Mr. Keith had vastly the best of it. In the course of the debate Mr. Keith referred to a favorite argument of his, that the business of the United States is now regulated by 102 tribunals, and said that he had vastly rather be regulated by ONE tribunal than 102, and, that, whether we wished it or not, regulation or supervision, or whatever it might be called, was coming.

Mr. Downman spoke to the question, and generally discussed the National Lumber Manufacturers' Association, and took occasion to exhibit the shingle that had been treated with asbestine paint.

At this point in the discusion the question again came up of what could be done in the way of reorganization, and many speakers urged that a closer attention to local association work and a larger amount of money to spend was all that was needed.

Mr. Allen spoke to the question of the proposition which the Western Pine Manufacturers' Association had adopted, and the fact that they had agreed to present an assessment of 1½ cents per

E. B. HAZEN, OF PORTLAND, ORE.

thousand on production to be turned in to the National Lumber Manufacturers' Association.

Charles E. Patten spoke clearly to the question and was in favor of any reasonable sum of money being raised.

Mr. Bronson was not in favor of doing as much as had been proposed.

Mr. Downman repeated his plea for $210,000 income a year for the National Lumber Manufacturers' Association, and drew the deadly parallel of comparison between the West Coast Lumbermen's Association and other manufacturers' associations.

In the end, the matter was all turned over to a committee, consisting of A. L. Paine, Hoquiam, Wash.; W. H. Boner, Everett, Wash.; Everett G. Griggs, Tacoma, Wash.; E. B. Hazen, Portland, Ore., and Thorpe Babcock, Seattle, Wash., and the meeting adjourned.

SATURDAY IN THE GRAYS HARBOR COUNTRY.

The party left Seattle on Friday night direct for Hoquiam, where they had breakfast at the Gray-

MAJ. E. G. GRIGGS, OF TACOMA, WASH.

port hotel, and where Alex Poulsen, F. J. Shields, J. P. Keating, A. L. Paine and other prominent lumbermen of that section met the party.

An inspection was made of the sawmills of Hoquiam in a very painstaking manner, going first to the Grays Harbor Lumber Co.'s mill, to observe what is probably the fastest, largest capacity, lumber mill in the world.

With extra heavy machinery, and catering as much as possible to heavy, long fir timbers and the like, the use of more than a superabundance of power, there has been made in this mill, on a single band, with the assistance of the gang edger, 1,200,000 feet of lumber in a single day.

Incidentally, in going about the Grays Harbor country the party discovered the plant of the Hoquiam Lumber & Shingle Co., which has a daily capacity of 250,000 feet, Henry W. Bale, vice-president, and A. W. Bryden, manager; the National Lumber & Manufacturing Co., with a ten-hour capacity of 300,000 feet; the pioneer institution of the Northwestern Lumber Co., F. J. Shields, general manager, and J. P. Keating, sales manager; the Eureka Lumber Co., Alex Poulsen, vice-president; Robert Poulsen, president, and J. C. Shaw, treasurer, cutting 175,000 feet of fir with a single band and re-saw and 400,000 shingles daily; the E. K. Wood Lumber Co., O. M. Kellogg, manager; Bay City Lumber Co., Sam Anderson, manager and president, capacity 175,000 feet in ten hours; Grays Harbor Shingle Co., E. T. Miller, manager, capacity 400,000 shingles daily; Aberdeen Lumber & Shingle Co., Cliff Weatherwax, president, capacity 175,000 feet of lumber and 175,000 shingles; General Package Co., F. A. Bausfield, manufacturer of boxes; Wilson Bros. Lumber Co., John Wilson, president, capacity 175,000 feet of lumber daily; S. E. Slade Lumber Co. plant, now closed down; American Mill Co., two mills, E. Hulburt, president, daily capacity 300,000 feet; Anderson-Middleton Lumber Co., A. W. Middleton and G. E. Anderson, capacity 175,000 feet; Panama & Eastern Lumber Co.; Woodlawn Shingle Co., capacity 500,000 shingles per day; Grays Harbor Commercial Co., Neil Cooney, manager, and W. A. Williamson, assistant manager, which cuts 250,000 feet of lumber in 10 hours; the Wilcox Shingle Co., which makes 225,000 shingles per day; the Donovan Lumber Co., of which William Donovan is president and manager, the plant producing 160,000 feet of lumber per day, and several other plants of which no description was secured.

During the morning the party visited the plant of the Grays Harbor Shipbuilding Co. at Hoquiam, and saw on the ways three of the largest wooden ships which have ever been built in this country, each capable of carrying 2,500,000 feet of lumber, one of which will go on the water November 25, the press day of this issue of the LUMBER WORLD REVIEW.

The party, in company with the mill men of the section, took dinner, at the courtesy of the Grays Harbor lumbermen, at the Washington hotel, at Aberdeen, and from there went to the room set aside for the meeting of the afternoon, where really one of the best meetings of the entire trip was consummated; Mr. Turnbull, Mr. Keith, Mr. Goodman and Mr. Downman, speaking directly to the question of trade extension, financing the National Lumber Manufacturers' Association, the inactivity of trade, and in this symposium Everett G. Griggs, of Tacoma, took a very big hand.

Senator Alex Poulsen, a reactionary of a high type, proposed that the lumber manufacturers join in the plan to put in retail yards in all of the centers of the territory in the interior of the United States, and for his pleasant originality was challenged by R. H. Downman in a convincing and ringing speech in several sections, in which he showed that the thing to do was to compel the retail lumber dealer to handle lumber by advertising lumber and making lumber popular, rather than to establish retail yards in the large cities.

The meeting at Aberdeen was in charge of A. L. Paine, who presided gracefully.

A vote of thanks was given the visiting lumbermen.

Before leaving Aberdeen, A. L. Paine, E. B. Hazen and Everett G. Griggs got together and agreed upon a report to make to the West Coast Lumbermen's Association regarding the raising of money to carry on the work that it is demanded be done.

A copy of that report is printed elsewhere in this article.

The party arrived at Portland at 10:30 on Saturday night.

The members of the National Lumber Manufacturers' Association party were entertained on Sunday by Portland lumbermen, being taken for an automobile trip over the Columbia highway.

DOINGS AT PORTLAND, ORE., NOVEMBER 20.

Portland, Ore., Nov. 21.—[Special Telegram.]—Yesterday the visitors were taken for a sightseeing trip on a steamer around the harbor which occupied the entire forenoon.

At noon the members of the party were entertained by the lumbermen of Portland and lumbermen from other parts of Oregon at luncheon at the

J. H. BLOEDEL, OF BELLINGHAM, WASH.

Portland Chamber of Commerce. At this function a few impromptu talks were made by several of the members and visitors, all of which led up to the introduction of Charles S. Keith, of Kansas City, Mo., the speaker of the day. Mr. Keith delivered an elaborate address on the work of the Chamber of Commerce of the United States of America, of which he is a director, confining himself largely to the most recent referendum sent out by the Chamber of Commerce.

After Mr. Keith's address the lumbermen adjourned to a meeting composed of lumbermen exclusively and of this gathering E. B. Hazen, of Portland, was made chairman. Short talks were made by R. H. Downman, A. R. Turnbull, R. B

Digitized by Google

Goodman and C. S. Keith, members of the manufacturers' party, each of whom confined himself to the subject which he had assumed to cover throughout the trip. The lumbermen who heard them were greatly interested in the subjects discussed.

A dinner was given the Portland Chamber of Commerce Monday evening at 6:30, at which over 400 lumbermen and business men were present. This was the largest assemblage that has met the eastern committee thus far during its trip.

The paper of the evening was delivered by E. B. Hazen, of Portland. Because of its vast importance and the injustice that would be done to Mr. Hazen's effort by giving it a synopsis by wire, no review of his address will be made in this issue, but it will be published in full in a later issue. At least a dozen ringing speeches were delivered during the evening, among them being one by J. H. Bloedel, of Bellingham, Wash., president of the West Coast Lumbermen's Association. Mr. Bloedel's speech was, all things considered, one of the most remarkable and logical pleas for lumber association work that the writer has heard in thirty years' experience. His address and that of others of his association confirms the belief that if by any chance the West Coast Lumbermen's Association should not come up to what its friends believe it should in the final adjustment of raising the funds necessary to properly advertise wood to the world at large, it certainly will not be the fault of its executives and leaders.

The addresses made by Messrs. Downman, Goodman, Keith and Turnbull were impromptu and impressive, being in each case a resumé of the work accomplished in the several territories represented by the speakers. The December 10 issue of the LUMBER WORLD REVIEW will include the complete text of the remarks of these gentlemen and this telegram can necessarily be only an announcement of the good things that are in store for the next issue.

THE PROGRAM OF TUESDAY, NOVEMBER 21.

This morning at 8 o'clock the party, with many Oregon lumbermen accompanying them, went down the Columbia river for an investigation of the camps and mills of the Nehalem Timber & Logging Co. This trip was of deep interest to all of the visitors, as well as to the local lumbermen. The party returned from the river trip at 4 o'clock and left for San Francisco at 8 o'clock this evening. Those who accompanied them to the latter city were H. D. Langille, E. T. Allen and Geo. M. Cornwall, of Portland, and B. A. Johnson, of Chicago. It is understood that an elaborate program has been provided by members of the San Francisco lumber trade in the way of addresses and entertainment.

AT SAN FRANCISCO, THURSDAY, NOVEMBER 23.

San Francisco, Cal., Nov. 23—(Special Telegram). —One hundred and seventy-nine lumbermen, representing all branches of the trade, inclusive of manufacturers, retailers, wholesalers and timber owners, gathered to welcome the visiting committee of the National Lumber Manufacturers' Association at an elaborate luncheon given by the California lumbermen in the ball room of the Palace Hotel at 12:30 today. Capt. E. A. Selfridge, jr., presided and at the conclusion of the luncheon he introduced F. J. Koster, president of the San Francisco Chamber of Commerce. Mr. Koster is a barrel manufacturer and is deeply interested in all matters relating to the timber and lumber interests. He welcomed the visitors and made a ringing address on co-operation, which was much appreciated by his hearers.

R. H. Downman was introduced and spoke in a general way of the work of the National Lumber Manufacturers' Association and stated that he would talk more at length at the general meeting of the lumbermen, which would be held at a later hour.

The tables at the luncheon were decorated with miniature houses and novelties of various designs made of redwood and California sugar and white pine. A magnificent shield, in red, white and blue, hung over the presiding officer's chair and upon this was emblazoned the slogan of the National Lumber Manufacturers' Association, "There is a Wood For Every Need" in letters six inches high. This handsome decoration was designed by A. B. Wastell, of San Francisco. The visitors and other guests of the lumbermen were complimented by favors, such as black cats carved from wood and similar articles.

At the banquet, which was held in the evening, President E. A. Selfridge, jr., of the Redwood Manufacturers' Association, officiated as toastmaster. Addresses were delivered by R. H. Downman, R. B. Goodman, A. R. Turnbull and H. D. Langille, all of whom spoke along the same lines they had followed at the gatherings at Portland, Seattle, Tacoma and Spokane.

E. T. Allen, of Portland, made a statement to the assembly as a matter of news as to just what had been adopted in the way of resolutions and other actions taken at the previous meetings held with the eastern committee at these cities.

A motion was made and adopted that a committee of three, representing the redwood interests and a similar committee, representing the pine interests, be authorized to formulate and present a report as to what they deem will be proper for their respective associations to do along the lines of what the other associations have done. These committees will be named later by Capt. Selfridge. No instructions were suggested for these committees and no queries were launched at the speakers. The conference with the California lumbermen ended with this session and no prophecy as to what action will be taken can be ventured.

PROBABLE RESULTS OF THE TRIP.

To sum up the results of the trip it looks as if there would be some real endeavor made to raise a yearly fund of $210,000 for the use of the National Lumber Manufacturers' Association. It is also regarded as possible that there may be a reorganization of the National Lumber Manufacturers' Association on a plan that will take in the manufacture of articles of commerce from the tree.

CHICAGO ASSOCIATION FAVORS RECONSIGNMENT.

The Lumbermen's Association of Chicago, through its secretary, Edwin E. Hooper and the chairman of its traffic committee, A. Fletcher Marsh, has issued a brief on Docket No. 8131 in the matter of rates on and the classification of lumber and lumber products, under date of November 16, 1916. One of the interrogatives issued by the Interstate Commerce Commission August 2, 1915, was "Should transit provisions be made universal and upon the same terms?" The Interstate Commerce Commission issued a digest of the answers to the seventeen questions and there were some differences of opinion shown among the lumbermen in their attitude on this question.

The brief contains a full statement of the position of the association, the testimony submitted by two of the members of the association and the arguments against the abolition of the reconsignment and diversion privileges. The association contends that these privileges are well fixed as settled practices of the railroads and of shippers and that the small mill operator who markets his product largely with the wholesalers would be practically put out of business were there to be any charge made, large or small, for reconsigning and diverting cars.

Testimony on this point was submitted by Harry J. Aldworth, a well known lumber traffic manager of South Bend, Ind., who represented the hardwood interests of the Lumbermen's Association and by Percival S. Fletcher, of the D. S. Pate Lumber Co., of Chicago, on behalf of the yellow pine interests of the association. Mr. Aldworth stated that any conditions or hardship imposed upon the wholesale dealer in this respect will necessarily revert on the small manufacturer. He said that in the hardwood business at least, one free reconsignment is absolutely necessary and its abolition would cause hardship on the part of the small mills. Furthermore, it would embarrass the consuming trade, which depends largely upon quick buying and prompt delivery, by means of which the consumers are able to conduct their business without the large investment that would be rendered necessary in the carrying of large stocks. The retail dealers are now, it is said, largely dependent upon the transit cars and are not able to anticipate their needs as much as sixty days ahead.

Mr. Fletcher stated that it has been the experience of his company that transit cars do not affect the price of lumber materially, as he gets just as good prices for the transit material as he does for the direct shipments. Both Mr. Fletcher and Mr. Aldworth agreed in their testimony that a charge of as much as $25 for reconsignment of cars would force not only the wholesale lumber dealers, but many of the small mill men out of business.

In their testimony these gentlemen made the point that inasmuch as the reconsigning privilege had been voluntarily extended without cost by a large majority of the carriers, it could be assumed that the cost of the reconsignment is so immaterial as to be of little consideration; that the soliciting agents of the carriers are actively looking for business and the railroads are paying considerable money in salaries to the representatives who solicit it. From this it is inferred that the reconsigning business is a benefit instead of a detriment to the carrier.

The brief also submits several decisions made by the commission in recent years, in which the reconsignment and diversion privileges are approved as being a commercial necessity.

NEW INTER-INSURANCE CONCERN.

New York, Nov. 21.—The fire insurance committee of the National Wholesale Lumber Dealers' Association has been working on the recommendation of the annual meeting of the association held in Philadelphia in March, on organizing an inter-insurers' association in the interest of the membership. At two meetings of the board of trustees the project received very favorable consideration and was referred to the fire insurance committee with power to act. The committee has adopted a plan of operation which will enable the carrying on of an insurance business among the members and strong financial backing has already been secured. The purpose of this plan is primarily to furnish members with fire insurance protection at cost. At the same time, it will broaden and extend the usefulness of the work of the association and will prove a good investment for those who participate in the underwriting. Within a few days it is expected that the committee will have a more definite announcement to make to its members as to details of operation, etc. The committee in charge is as follows: M. E. Preisch, chairman, Haines Lumber Co., North Tonawanda, N. Y.; Gordon C. Edwards, W. C. Edwards & Co., Ottawa, Ont.; R. L. Sisson, A. Sherman Lumber Co., Potsdam, N. Y.; A. L. Stone, Nicola, Stone & Myers Co., Cleveland, Ohio; F. S. Underhill, Wistar, Underhill & Nixon, Philadelphia, Pa.

THE SAW IN HISTORY.

At several of the recent logging association meetings much attention has been paid to that venerable implement, the cross cut saw. Its successor, the jump saw, has passed away, and another successor, the circular, is undergoing an evolution into the segment circular, but both are being largely replaced by the band. Meanwhile the ancient cross cut saw, while substantially unchanged in its general shape, from its original form, has undergone many improvements in the betterment of its cutting qualities, in the temper of its steel, and in several other scientific features which have made it a more valuable and efficient implement than ever.

Several dissertations upon 'Recent Improvements in Cross Cut Saws" were read at the recent annual meeting of the Southern Logging Congress by representatives of several of the great saw making institutions of the country, and these improvements were enumerated, and to the expert saw man, at least, mark real progress. A prominent lumberman and logger said at another meeting that there had been no change in the old cross cut saw during all the years since it first was invented. This gentleman probably did not mean literally what he said, because saw manufacturers are able to enumerate a great many changes that have been made with a view to modernizing the saw and improving its work. What the gentleman probably meant was that there had been no change in the general form of the cross cut saw, and that nothing of greater efficiency had been invented that could take its place in the economy of logging. That is true, for the cross cut saw is regarded as an indispensable, economic factor in woods operations, and accomplishes its purpose more cheaply than logging operators have been able to do with any other device.

Henry Disston & Sons, Inc., of Philadelphia, Pa., have recently issued a brochure commemorating the "Diamond Jubilee" of that house, or the completion of its seventy-five years of existence in the manufacture of saws. The book is entitled "The Saw in History," and it gives pictures of saws used in ancient times, including that of the cave dweller, that of the ancient Egyptian, and down to the present time, illustrating all styles, shapes and varieties of saws for the manifold uses to which they are put. It is an instructive work, and is of interest to others than the lumbermen or other users of saws, in that it describes the purpose to which any particular saw is adaptable.

General News of Associations and Clubs

ARKANSAS LUMBERMEN JOIN THE SOUTHERN HARDWOOD TRAFFIC ASSOCIATION.

Memphis, Tenn., Nov. 20.—The Southern Hardwood Traffic Association is on the point of receiving about 25 new members from Arkansas. For quite a while plans have been discussed between the governing board of the association and prominent Arkansas lumbermen looking to the perfection of arrangements by which the latter might have the proper facilities for handling traffic matters. Members of the board have made several visits to Little Rock, Helena and Pine Bluff, and lumbermen from these points have come to Memphis for conference with the officials of the association.

For a time the plan thought most advisable contemplated the opening of a branch of the association at Little Rock similar to that established at Louisville some months ago. However, following the visit to Memphis of a number of Arkansas lumbermen some days ago, it was decided that lumber firms in that state should join the association, and, that, in order that they might have proper representation, the governing board of this organization would be increased from 18 to 24 at the next annual in January. This is recognized on all sides as a very happy solution of the problem, as it will give the Arkansas lumbermen unequalled facilities for handling traffic matters, and as it will greatly increase the membership of the association, and thus enlarge its income and augment the prestige which it now enjoys.

SOUTHERN CALIFORNIA RETAILERS.

Retailers of southern California gathered at Los Angeles, that state, on Saturday, November 11, for the sixth annual convention of the Southern California Retail Lumber Dealers' Association. The attendance was gratifying and the meeting was a splendid success throughout. President C. C. Eymann, of the Eymann Lumber Co., Upland, Cal., presided.

Secretary E. R. Shepherd, of Los Angeles, in his annual report showed that the association had made a saving of $900 in expense during the year by various economies. He brought up the question of "poaching," with reference to the encroachments of the large city lumber yards and the mail order houses on the country trade. He said that this feature was one that had caused considerable trouble in southern California during the last year.

Edwin Meyers, secretary-manager of the California Redwood Association, was the first speaker on the program. Mr. Meyers had just recently taken charge of the advertising campaign of the California Redwood Association, prior to which he had been connected with the Southern Pine Association. He told what had been done by the cypress and yellow pine manufacturers in advertising their products and how the efforts put forth had resulted in great advantage to the manufacturers.

There was an extended discussion on shingles, during which Ira Smith, southern California representative of the California Redwood Association, put forward some good arguments favoring redwood shingles.

There followed a discussion on the question of the use of motor trucks for delivery of lumber and other merchandise direct to consumers, with the idea that where these deliveries were made in other towns from where the motor trucks were operated a license fee should be charged with the idea of keeping the business in each town for the home merchants. C. W. Pinkerton, of Ocean Park, Cal., made a motion that a committee of seven be appointed to consider this subject and outline the ideas of the association.

A banquet was given at the Bristol café in the evening, after which the association was given an address by Paul Schoup, president of the Pacific Electric Railway, one of the leading factors in interurban freight and passenger traffic in southern California. He told about the operations of the "jitney" bus and the motor trucks, which he said paid no taxes for the maintenance of the highways, nor did they open new territories to development or seek new fields to serve, but simply paralleled existing lines of railroad and in some cases got the cream of the business.

CONVENTION DATES.

December 4—Lumber Exchange of Baltimore, Baltimore, Md. Annual meeting.

December 5-6—Associated Cooperage Industries of America, Gayosa Hotel, Memphis, Tenn. Semi-annual meeting.

December 6-8—National Rivers and Harbors Congress, New Willard Hotel, Washington, D. C. Annual meeting.

December 8-10—Northern Lumbermen's Salesmanship Conference, Merrill, Wis.

December 11—New York Lumber Trade Association, Waldorf-Astoria Hotel, New York City. Annual meeting.

December 11-14—Southern Commercial Congress, Armory, Norfolk, Va. Annual meeting.

December 12-13—National Veneer and Panel Manufacturers' Association, Auditorium Hotel, Chicago, Ill. Annual meeting.

January 16-18—Northwestern Lumbermen's Association, Court House, Minneapolis, Minn. Annual meeting.

January 18-19—American Forestry Association, Willard Hotel, Washington, D. C. Annual meeting.

January 20—Gum Lumber Manufacturers' Association, Memphis, Tenn. Annual meeting.

January 23-24—Retail Lumber Dealers' Association of Indiana, Claypool Hotel, Indianapolis, Ind. Annual meeting.

Januuary 23-24-25—Mountain States Lumber Dealers' Association, Brown Palace Hotel, Denver, Colo. Annual meeting.

January 24-25—Retail Lumber Dealers' Association of the State of New York, Onondaga Hotel, Syracuse, N. Y. Annual meeting.

January 24-26—Ohio Association of Retail Lumber Dealers, Deshler Hotel, Columbus, Ohio. Annual meeting.

January 24-26, 1917—Southwestern Lumbermen's Association, Muehlebach Hotel, Kansas City, Mo. Annual Meeting.

January 25-26—Northern Hemlock & Hardwood Manufacturers' Association, Hotel Pfister, Milwaukee, Wis. Annual meeting.

January 30-31—Hardwood Manufacturers Association of the United States, Hotel Sinton, Cincinnati, Ohio. Annual meeting.

January 31-February 1-2—Chamber of Commerce of the United States of America, New Willard Hotel, Washington, D. C. Annual meeting.

February 7-8—Retail Lumber Dealers' Association of Pennsylvania, Fort Pitt Hotel, Pittsburgh, Pa. Annual meeting.

February 7-8-9—Nebraska Lumber Dealers' Association, Hotel Rome, Omaha, Neb. Annual meeting.

February 7-9—National Association of Box Manufacturers, Hotel LaSalle, Chicago, Ill. Annual meeting.

February 14-16—Western Retail Lumbermens' Association, Hotel Davenport, Spokane, Wash. Annual meeting.

February 14-16—Illinois Lumber & Builders' Supply Dealers' Association, Hotel Sherman, Chicago. Annual meeting.

February 20—Lumber Dealers' Association of Connecticut, Hotel Taft, New Haven. Annnual meeting.

February 20-22—Wisconsin Retail Lumber Dealers' Association, Hotel Pfister, Milwaukee, Wis. Annual meeting.

April 10—Lumbermen's Association of Texas, Galveston, Texas. Annual meeting.

CONNECTICUT LUMBER DEALERS.

The twenty-fifth anniversary meeting of the Lumber Dealers' Association of Connecticut will be held at the Hotel Taft, New Haven, on Tuesday, February 20. The business session will be held early in the afternoon and a splendid dinner with a program of entertainment will be served at 6 o'clock in the evening. A committee for the carrying out of arrangements has been appointed and is composed of R. W. Chatfield, Derby, Conn., chairman; F. W. Bogardus, Stamford, Conn.; Wm. J. Riley, Hartford, Conn.; Geo. E. Alling, New Haven, Conn., and Jere J. Murphy, Naugatuck, Conn.

LOUISVILLE CLUB ELECTS OFFICERS.

Louisville, Ky., Nov. 18.—The Louisville Hardwood Club at its annual meeting held at the Seelbach Hotel, elected the following officers for one year: President, T. Smith Milton, of the Churchill-Milton Lumber Co.; vice-president, A. E. Norman, Jr., of the Norman Lumber Co.; treasurer, Claude M. Sears, of the Edward L. Davis Lumber Co., re-elected; secretary, R. R. May, of the Louisville Branch of the Southern Hardwood Traffic Association, secretary.

The retiring officers were Harry Kline, of the Louisville Veneer Mills; and Harold Gates, vice-president, with the Louisville Point Lumber Co. These two officers have served two years each.

The feature talk of the evening was in connection with the recent meeting of the Federal Trade Commission at Memphis.

NATIONAL HARDWOOD ASSOCIATION.

The monthly bulletin of the National Hardwood Lumber Association was issued last week by Secretary Frank Fish. The statement of inspection work for October shows a total of 16,522,560 feet, of which 9,384,845 feet was inspected by the official inspectors.

The executive committee held its regular fall meeting at its headquarters in the McCormick building, this city, October 26. There were forty-three new applications for membership and of these forty-two were accepted. Secretary Fish reported that the number of names dropped from the membership through failures, resignation and other causes since the annual meeting in June was less than 10 percent of the number during the corresponding four months of the preceding association year. The total inspection of lumber during these same four months exceeded that of the corresponding period in 1915 by over 10,000,000 feet. During the month ended November 15 the following applications for membership were received: Holly Ridge Lumber Co., Louisville, Ky.; Coulter Lumber Co., Grand Rapids, Mich.; Port Barre Timber & Tie Co., Ltd., Port Barre, La.; Elk River Coal & Lumber Co., Dundon, W. Va.; James E. Tague & Co., Philadelphia, Pa.; John C. Hoof & Co., Chicago, Ill.; J. H. MacDowell Lumber Co., Inc., Brooklyn, N. Y.; Cornelius Lumber Co., St. Louis, Mo.; Ruth Lumber Co., Poplar Bluff, Mo.; Waddell-Williams Lumber Co., Rhoda, La.; J. C. Greer, Evansville, Ind.; Hart & McDonagh, Toronto, Ont.; French Broad Lumber Co., New York City, N. Y.; Deerfield Lumber Corp., Mountain Mills, Vt.

ARKANSAS TO HAVE A STATE FORESTRY ASSOCIATION.

Little Rock, Ark., Nov. 15.—At a meeting held in Little Rock on November 2, a committee was formed, which it is hoped will lead to the formation of a state forestry association in Arkansas. The meeting was attended by a number of timber land owners of the state, and four officials of the United States forestry service.

Harry E. Kelly, president of the Kelly Trust Co., of Fort Smith, was selected as chairman of the committee, and Mr. Huie, of the government forestry service at Hot Springs, was selected as secretary. The other members chosen are: P. H. Miller, of Benton; Junius R. Case, president of the Arkansas Lime Co., Ruddells; J. R. Phipp, of Fayetteville, and E. J. Bodman, of Little Rock, secretary of the Union Trust Co. and chairman of the Arkansas Profitable Farming Committee.

ORGANIZATION OF OAK MANUFACTURERS

Large Gathering of Producers at Memphis Adopt Aggressive Tactics—Forty-Seven Charter Members Enrolled—Edward A. Lang, of Chicago, Chosen President

For several centuries the supremacy of oak as a desirable lumber for interior trim, furniture, flooring and a thousand and one other purposes has been unquestioned. Recently, however—especially within the last year—other woods have been brought forward to take its place and, owing to lower price and equal availability in securing quantities, they have often been given preference. The result has been that many users of oak, especially for furniture, have adopted other woods—equally meritorious, perhaps, but the sale of which has been pushed with a greater amount of vigor than has oak.

The need of a compact organization of oak producers to stem this tide of invasion became apparent and through the activities of a number of lumbermen of Memphis, Tenn., prominent among whom were James E. Stark, William H. Russe and others in that market, as well as a number from other oak producing regions, a meeting was called at the Hotel Chisca, Memphis, Tenn., on Friday, November 10. Those who responded to the call

J. E. STARK, OF MEMPHIS, TENN.

were of the type of lumbermen who are usually found at the head of such movements—men of pronounced convictions and who desire to show their faith by their works and are not afraid to put up a little money as a further earnest of their ideas.

PURPOSES OF THE ASSOCIATION.

The purpose of the American Oak Manufacturers' Association is stated by W. H. Russe, chairman of the publicity committee, to be as follows: To exploit oak lumber in every legitimate manner and promote the welfare of members of this organization in every possible way. To this end information will be compiled and disseminated by the secretary covering stocks of oak lumber on hand at given dates and the amount of oak lumber sold during stated periods, together with the actual prices obtained therefor, these reports in both cases being based on returns made by members of the association. Publicity will be used to keep oak lumber as prominently before the consuming and distributing trade as possible and no effort will be spared which can, in any way, contribute to the creation of new uses or new outlets in the United States, in Canada or abroad for oak lumber and products made therefrom.

NOTES OF THE BUSINESS SESSION.

W. H. Russe, of Russe & Burgess, Inc., Memphis, Tenn., called the meeting to order and requested James E. Stark, of Memphis, to outline the purpose of the gathering. Mr. Stark said that the meeting was an outgrowth of the suggestion

E. A. LANG, OF CHICAGO, President.

of an out of town manufacturer and was not really a Memphis organization. However, he believed that the Memphis lumbermen were convinced that the oak manufacturing industry needs something to put it on its feet and to restore prices. He called attention to the fact that for many purposes oak had been supplanted by other woods and said that it was the only wood which had no organization for the exploitation of its virtues. He said that the idea of an organization had been warmly endorsed by eastern manufacturers and that it had been proposed to incorporate. However, the plans had gone no further than to select a temporary chairman for this meeting and he thought it was up to those present to tell what they desired to do further in the way of organization.

Following Mr. Stark's address the proposed charter of the association was read and adopted. It provides in its eligibility clause for five classes of members, as follows:

W. H. RUSSE, OF MEMPHIS, TENN.

Class A will include manufacturers of oak lumber whose dues will be assessed at a rate not to exceed 10 cents a thousand feet, log scale, based on annual production.

Class B will include manufacturers of sawed or sliced oak veneer, whose dues shall be $100 a year.

Class C will include manufacturers of rotary oak veneer, whose dues will be $50 a year.

Class D will embrace manufacturers of oak forest products, inclusive of staves, heading, ties, etc., whose dues will be $50 a year.

Class E will include owners of oak stumpage who do not manufacture lumber and their dues will be $1 a million feet on their estimated stumpage.

The report of the committee on constitution and by-laws was the first order of business at the afternoon session and the report was adopted and the permanent organization effected. All present were then asked to enroll themselves as members, and practically every concern represented in the meeting signed the association charter.

W. H. Russe, of Memphis, offered resolutions, protesting against the abandonment by the government of the harbor at Gulfport, Miss., which were unanimously adopted.

W. E. DE LANEY, OF LEXINGTON, KY.

It was decided to make Memphis the official headquarters of the new association.

OFFICERS ELECTED.

The following officers were proposed by the committee on permanent organization and were unanimously elected:

President—E. A. Lang, Paepcke-Leicht Lumber Co., Chicago.

First vice-president—W. H. Russe, Russe & Burgess (Inc.), Memphis.

Second vice-president—James E. Stark, James E. Stark & Co., Memphis.

Treasurer—R. L. Jurden, Penrod, Jurden & McCowen, Memphis.

Directors (for three years)—W. E. DeLaney, Lexington, Ky.; F. W. Mowbray, Cincinnati; Ralph May, Memphis; T. M. Brown, Louisville; W. C. Johnson, Mansfield, Ohio; J. F. McIntyre, Pine Bluff, Ark., and W. A. Ransom, Memphis.

For two years—Max Pease, Poplar Bluff, Mo.; R. M. Carrier, Sardis, Miss.; J. F. McSweyn, Memphis; P. A. Ryan, Lufkin, Tex.; George E. Breece, Charleston, W. Va.; S. M. Nickey, Memphis, and Claude Maley, Evansville, Ind.

For one year—M. H. Massee, Macon, Ga.; E. V. Babcock, Pittsburgh; R. H. Darnell, Memphis; A. B. Ransom, Nashville; W. B. Burke, Charleston, Miss.; C. Boice, Richmond, Va., and F. R. Gadd, Chicago.

BENJAMIN AIKEN ELECTED SECRETARY.

A meeting of the board of directors was held

Digitized by Google

following the adjournment of the meeting. President E. A. Lang appointed the following executive committee: James E. Stark, Memphis; R. L. Jurden, Memphis; Frank R. Gadd, Chicago; W. E. DeLaney, Lexington, Ky. It was decided by the executive committee that seven members of the board of directors would constitute a quorum and that three members of the executive committee would constitute a quorum of that body for the transaction of business. The directors decided that the next meeting of the association would be held in Memphis, Tenn., on or about January 20, 1917.

At a meeting of the executive committee Benjamin Aiken, of New York, was elected secretary of the association. Mr. Aiken was engaged in the sawmill and wholesale lumber business in Cincinnati for several years, but some time ago accepted the position of advertising manager for the Huyler Candy Co., of New York. He returned to New York after the meeting and after settling up his affairs there will go to Memphis and assume his new duties probably around the first of the year. He is said to be admirably equipped for the position of secretary.

STANDING COMMITTEES.

Standing committees of the association are as follows:

Membership: M. B. Cooper, chairman; F. W. Mowbray, Ralph May, F. R. Gadd, T. M. Brown, J. F. McIntyre, Claude Maley, A. B. Ransom, A. S. Johnson, M. H. Massee, W. A. Ransom and Homer Alexander.

Finance: F. E. Gary, chairman; H. B. Weiss and William Pritchard.

Assessments: C. L. Harrison, chairman; S. M. Nickey, J. W. McClure, Ross Hackney and W. P. DuBose.

Resolutions: W. E. DeLaney, chairman; W. H. Russe and Earl Palmer.

Technical Research: W. B. Burke, chairman; R. M. Carrier, W. A. Gilchrist, E. O. Robinson and George E. Breece.

Advertising: F. R. Gadd, chairman; James E. Stark and Nelson H. Walcott.

NORTHERN SALESMANSHIP CONFERENCE.

The sales managers' committee of the Northern Hemlock & Hardwood Manufacturers' Association has announced the Northern Lumbermen's Salesmanship Conference to be held at the Badger Opera House, Merrill, Wis., December 8, 9 and 10, 1916. The conference is held at Merrill at the instance of the four large lumber institutions there, the Heinemann Lumber Co., the A. H. Stange Lumber Co., the Kinzel Lumber Co. and the Union Land Co. The committee in charge of the conference is composed of the following: George C. Robson, Kinzel Lumber Co., Merrill, chairman; J. F. Halpin, C. H. Worcester Co., Chicago; H. S. Butts, Park Falls Lumber Co., Park Falls; Alfred Klaas, Holt Lumber Co., Oconto; W. E. Vogelsang, Turtle Lake Lumber Co., Grand Rapids, Mich. Lumbermen, whether manufacturers or dealers, wholesalers, commission men or salesmen, are cordially invited to attend.

The program has been tentatively prepared but had not been completed in all details at the time of going to press. It has been arranged that a prominent manufacturer of lumber will be selected as temporary chairman at each session of the conference.

At the opening session on Friday morning, December 8, there will be introductory remarks by Chairman Robson; an address on "What I Think About It" by some northern manufacturer, name to be announced; an address on "The Manufacturers' Side of the Salesmanship Problem," by Edward Hines, of Chicago; an address on "The Relative Durability of Competing Woods," by O. T. Swan, secretary of the association; an address on "The Sales Managers' Side of the Selling Problem," by Chairman George C. Robson; and an address on "The Salesman's Side," by Harry G. Wilbur, of Milwaukee, president of the Northwestern Lumber & Sash & Door Traveling Salesmen's Association.

Friday afternoon the party will visit the plant of the Kinzel Lumber Co., after which the session will be resumed at the Badger Opera House. A. L. Osborn, of Oshkosh, will deliver an address on "The Selling of Lumber, Past, Present and Future." H. H. Butts, of Park Falls, will have for his subject "Systematic Salesmanship, its Possibilities and Limitations." F. M. Ducker, traffic manager, of Oshkosh, will talk on "Transportation in Northern Business." W. H. McDonald, chief inspector, and Roger E. Simmons, timber engineer, will talk on "Commercial Soft Woods and Their Grading Rules—A Selling Factor." J. F. Halpin will have for his subject "How the Work of the Sales Managers' Committee Can be Put on the Most Efficient Basis." There will also be a discussion on market conditions, led by some northern manufacturer.

Friday evening there will be a banquet given at the Hotel Badger by the manufacturers of Merrill.

On Saturday morning a prominent Wisconsin retailer, name to be announced, will talk on the subject "The Retailers' Side of the Selling Problem."

Next following will be an address with accompanying exhibits by D. E. Breinig, of New Milford, Conn., on the subject "Beautiful Birch; How to Make it More Beautiful."

W. W. Brown, of Two Rivers, Wis., will talk to the subject "The Wood Consumers' Requirements." W. H. McDonald, chief inspector, will present his ideas of "Co-operation with the Retailer," and Secretary Swan will deliver an address on "The Relative Strength of Timbers."

In the afternoon the company will visit the A. H. Strange Co.'s plant and after that will return to the Badger Opera House where Rolf Thelen, engineer, of the Forest Products Laboratory at Madison, will talk on "Competing Materials." Roger E. Simmons, timber engineer, will talk on "Competitive Markets." S. J. Williams, of Madison, will talk on "Safe and Unsafe Woods in Building." The sales managers' committee will present its report on market conditions, which will wind up the regular program.

In the evening there will be an entertainment given by the Merrill lumbermen.

Sunday morning the Heinemann Lumber Co.'s plant will be visited. Chief Inspector McDonald will discuss grades and present exhibits. Then a special train will be taken to the Newwood camps of the Union Land Co., where a special camp dinner will be served. That afternoon the members will listen to an address by E. M. Barrett, secretary of the World's Salesmanship Congress, on "Salesmanship in Its Broadest Sense."

Some time during the sessions representatives of the Michigan Hardwood Manufacturers' Association will be heard and also other speakers who have been invited to address the gathering.

MEMPHIS CLUB IN INTERESTING MEETING.

Memphis, Tenn., Nov. 20.—The principal feature of the semi-monthly meeting of the Lumbermen's club at Memphis, held at the Hotel Gayoso, Saturday, November 11, was the address delivered by Erwin W. Thompson, commercial attache of the United States at the Hague and at Berlin, during the course of which much first-hand information was given members of the club about conditions now prevailing in Holland and Germany.

Mr. Thompson said he took little stock in the theory that Germany would flood the markets of the world with products of various kinds following the conclusion of peace. He pointed out that there was a dearth of raw materials, on account of the effectiveness of the blockade maintained by the allies, and, that, because of this scarcity of lumber, steel, iron and various other metals, practically no progress was being made in turning out finished goods for use now or at any time in the future.

One of the pleasing features of the address of Mr. Thompson was the declaration on his part that both Holland and Germany will have to import lumber on a big scale from the United States, as soon as the war is over. He thought that a great deal of the lumber would have to be bought on credit, but he emphasized the fact that business interests in both countries would be entitled to the usual credit accommodation. He said that both had large quantities of gold, and that this was particularly true of Germany, which began hoarding the yellow metal long before the war began.

He also said that Germany had splendid factories and an ample supply of skilled labor, and that as soon as the blockade was raised, there would be an era of unparalleled industrial activity in that country.

At the conclusion of the address Mr. Thompson was tendered a vote of thanks for his excellent presentation of a subject which lies pretty close to the hearts of every lumberman catering to the export trade.

Two applications for membership were filed as follows:

H. J. Davis, H. J. Davis & Co., Clarksdale, Miss., and Charles P. McManus, resident manager for the Probst Lumber Co., Cincinnati.

On motion of George C. Ehemann, chairman of the river and rail committee of the club, resolutions were adopted strongly protesting against the abandonment by the United States authorities of the harbor at Gulfport, Miss. These resolutions were similar to those passed by the Southern Hardwood Traffic Association and the American Oak Manufacturers' Association, and they not only protest against the abandonment of the harbor, but ask that appropriations be increased, instead of withdrawn. They explain that a very large percentage of lumber and forest products sent from the valley states go via Gulfport, ond that the elimination of that port would incur unbearable congestion and delay at New Orleans, which would have to care for all this business. Facilities at New Orleans, they point out, are already unequal to the requirements of lumber interests now using that port, and they stress the fact that the harbor at Gulfport is absolutely essential to exporters of lumber and other commodities.

There were about 80 members and visitors present. The usual luncheon was served.

HONORING SNARK SEIDEL.

Members of the Hoo-Hoo Order in St. Louis, as well as from several outside points, honored Julius Seidel, Snark of the Universe, in giving him a dinner at a restaurant in St. Louis Thursday evening, November 9. Sidney S. May, of the May Lumber Co., presided and called upon a number of the members for speeches. In opening the speech-making program he devoted himself to the good work accomplished by Mr. Seidel on behalf of the Hoo-Hoo order. That gentleman responded in a happy way, thanking the members for their expression of confidence.

P. F. Cook also made an address on his favorite topic "To The Ladies," of whom there were a number present. Secretary-Treasurer E. D. Tennant also spoke felicitously.

John F. Gresley, of Omaha, Neb., Arcanoper of the Supreme Nine and P. T. Langan, of Cairo, Ill., a former member of the Supreme Nine and president of the Illinois Lumber & Builders' Supply Dealers' Association, were among the out-of-town guests. There were ninety-six ladies and gentlemen at the banquet and after the speaking concluded there was dancing.

HOO-HOO MAKE MERRY IN BEAUMONT.

Beaumont, Texas, Nov. 18.—Hoo-Hoo took a prominent part in the great parade that was the feature of the closing of the South Texas State Fair tonight. After the parade about 200 members of the Concatenated Order of Hoo-Hoo made merry "on the roof" of the Elks club until midnight. The principal feature of the program was the concatenation at which sixteen kittens were initiated into the mysteries of the great black kat and the festivities closed with a duck banquet, which proved one of the best and most enjoyable feasts held by the Hoo-Hoo in many years.

Ben S. Woodhead presided as toastmaster and entertaining talks were made by Harry J. Miller of Seattle, past Snark of the Universe; Harry T. Kendall, of Houston, Supreme Arcanoper; Marcus E. Sperry, Vicegerent, of Orange; J. C. Dionne, of Houston and James B. Roark of Hawthorne, La.

Comprising the official nine which conducted the concatenation were: Harry T. Kendall, snark; W. A. Priddie, senior Hoo-Hoo; Ben S. Woodhead, custocatian; W. A. Nichols, bojum; R. J. Morton, scrivenoter; J. C. Dionne, junior Hoo Hoo; Hamp Stone, jabberwock; R. A. McLaughlan, gurdon; Marcus E. Sperry, arcanoper.

W. A. Priddie, Vicegerent of the Hoo-Hoo order of southeast Texas, was elated over the success of Saturday's celebration. After the banquet he said he was very grateful to the committees for their excellent service, for without their co-operation the event would certainly have been a failure.

EVANSVILLE LUMBERMEN'S CLUB.

Evansville, Ind., Nov. 22.—At the last meeting of the Evansville Lumbermen's Club, which was held at the New Vendome hotel on Monday night, November 13. President Daniel A. Wertz appointed a committee to nominate officers of the club for the ensuing year and this committee will make a report at the next meeting of the club, which will be held on the second Tuesday night in December. The following were named on the committee: Joseph W. Waltman, of the J. W. Waltman Lumber Co., George O. Worland, of the Evansville Veneer Co. and J. C. Greer, of the J. C. Greer Lumber Co. Mr. Wertz has held the presidency of the club for two years and under his administration the club has grown and flourished. Mertice E. Taylor has been the efficient secretary for the past year.

The Latest News of the Lumber World

AMENDED CAR SERVICE RULES.

New Orleans, La., Nov. 21.—The American Railway Association, at its recent meeting in New York city, adopted amended car service rules which have been filed with the Interstate Commerce Commission at Washington. These rules in many respects change radically the regulations heretofore in effect and are expected to afford a speedy relief in the scarcity of rolling stock, which has been so severely felt in the south for the last several weeks. Advance copies of the rules have been submitted to A. G. T. Moore, assistant secretary of the Southern Pine Association, and a member of the Industrial Traffic League.

Some of the provisions of the amended form are that foreign cars belonging to direct connections must be returned to the home road and the home road would have the right to demand the return of its empty cars at the junction point where they were loaded.

A car received loaded in switching service must be returned to the home road, loaded or empty, if a direct connection within that switching territory; otherwise, unless it home routes from the switching line to some other road, it must be returned to the delivering road, loaded or empty.

An empty foreign car may be delivered to a connecting road, to be loaded within the designated switching lines and returned. Such delivery shall be indicated on the junction report by the words, "for loading."

The per diem rules prescribe a rate for the use of freight cars of 45 cents a car a day, but this may be increased for a specified period to an amount not in excess of $1.25 a car a day, which shall be paid for every calendar day.

A road diverting a foreign car shall pay to the owner thereof the sum of $5, in addition to the per diem, and shall report same as a separate item on the per diem report for the month in which the car was diverted.

The executive committee of the American Railway Association shall appoint a commission authorized to increase the per diem rate for a specified period in times of car shortage, but the commission shall in no case set the rate at a figure above the maximum rate named in per diem rule, nor give less than — days notice of change in the rates. Subject to the above limitations, the per diem rates may differ: (1) As between open and closed cars, and (2) as between official, southern and western classification territory.

The diversion penalty is increased from $2 to $10 and of this one-half is to go to the owner of the car diverted, and the other half to the American Railway Association.

RAILROAD BUYING ACTIVE IN THE NORTHWEST.

Tacoma, Wash., Nov. 20.—Inquiries and orders from the large transcontinental railways have been received in large quantities by Tacoma lumber manufacturers during the past ten days. On November 10 the Union Pacific system announced the placing of orders for 2,500 new freight cars, 1,000 of which are to be automobile cars and 1,500 standard box cars. A large portion of the lumber used in this order will be furnished by the mills of the Pacific northwest. The road's expressed intention is to make an effort to relieve the shortage of freight cars which now prevails throughout the country.

On November 18 the Chicago, Burlington & Quincy railroad gave out an inquiry for approximately 5,000,000 feet of Douglas fir lumber. Bids on this inquiry will be opened November 23, in Seattle. The inquiry calls for car material of assorted sizes, bridge stringers, large timbers and cross ties. It is the fourth large order placed by the Burlington during the past year, practically all of which has been supplied by the Douglas fir manufacturers.

EXAMINATION FOR TRADE COMMISSIONERS HELD.

Washington, Nov. 22.—Examinations were held in various parts of the country today for the lumber trade commissioners. While a complete list of those taking the examination will not be known for some days, the Bureau of Foreign and Domestic Commerce announces that 179 applications were sent out, about a third of whom took the former examination. Last time 142 applications were sent out and 120 took the examination. The papers will probably be corrected in from ten days to two weeks.

A GALA DAY AT VREDENBURGH.

The Vredenburgh Sawmill Co., at Vredenburgh, Ala., is making great preparations for a store opening and celebration on Thursday, November 30, Thanksgiving day. Peter Vredenburgh, jr., president of the company, says that he has been informed that every automobile within a radius of forty miles is booked for Vredenburgh on that day. Among the attractions will be a football game in the afternoon, and a dance and free motion pictures at night. Six free trains will be run to Vredenburgh during the day, and, as Mr. Vredenburgh says, "there is going to be a heap stirring." The occasion is the completion of the company's department store at Vredenburgh, which is splendidly stocked and would be a credit to any of the larger cities. Music will be rendered by the Selma brass band, and several thousand people in the country tributary to Vredenburgh are expected to participate in the celebration.

CONSIDER CAR SHORTAGE SITUATION.

Washington, D. C., Nov. 20.—Just before the adjournment of the annual convention of the National Association of Railway Commissioners, which has been in session here for several days, a committee was appointed to appear before the Newlands committee to look into the railroad situation, under a congressional resolution. The convention also passed the following resolution relative to the car shortage:

"Whereas, There now prevails throughout the United States a shortage of cars, unprecedented in proportion and stupendous in its possibility of damage to the industries of the country; and, while this stringency in transportation facilities is general all over the country, it is particularly acute in the central and western states; to such an extent has the shortage developed that business in many lines is paralyzed, and people in many states are menaced by a famine in fuel and foodstuffs; hundreds of thousands of bushels of grain in Iowa, Kansas, Nebraska and other states have been hauled to railway stations and dumped upon the ground for want of cars to move it to market; millions of dollars, represented by this marketable product of the farms is jeopardized, and the commercial equilibrium of the territory affected is imperiled; mines in Colorado and other states have been forced to suspend operations, and industries dependent upon their product for fuel have been compelled to shut down, or to seriously curtail their operations; perishable fruits and vegetables are being held in western states, with a prospect of partial and possible total loss; and,

"Whereas, It appears from statistics recently made public by the American Railway Association, that there were, for the 24-hour period, ending November 1, 1916, 108,010 fewer cars in the United States than were required to transport shipments offered; and,

"Wheras, It appears that the situation has reached such proportions that it has gotten beyond the control of the carriers themselves, as is evidenced by the recent action of the American Railway Association in naming a committee to confer with the Interstate Commerce Commission for the purpose of devising ways and means for enforcing the rules of the association regarding the return of foreign cars to their owners; and,

"Whereas, The misuse and retention of cars by certain carriers has disturbed the transportation equilibrium in the country; and,

"Whereas, Under the act to regulate commerce, as now in force, the Interstate Commerce Commission appears to lack the necessary authority, except after hearing and consequent delay, to make rules and issue orders governing the proper return of equipment to the lines owning or leasing the same; therefore, be it,

"Resolved, That a committee on car service and demurrage, consisting of seven members, with full power to represent this association, be appointed by the president to confer with the Interstate Commerce Commission, for the purpose of securing such immediate relief as is possible in this emergency; and, be it further

"Resolved, That the said committee on car service and demurrage be instructed to present these resolutions to the congress of the United States, and to urge upon that body the adoption of an amendment to the Act to Regulate Commerce which will confer upon the Interstate Commerce Commission authority to establish rules and regulations with respect to exchange, interchange, and return of equipment between the various railroads operating in the United States; and, be it further

"Resolved, That it is the sense of this association that one of the principal reasons of the car shortage in many sections of this country is failure of certain of the carriers to promptly return the equipment, which has been unloaded at points on their lines, to the roads owning the same; and, further, that this inconvenience and financial loss now being suffered by many of the shippers would be materially reduced if all of the carriers would immediately proceed to return the cars they are now using to the roads owning the same; and, be it further

"Resolved, That it is the sense of this association that the Interstate Commerce Commission, in its consideration of the application of the carriers for increased charge for demurrage, should compare the relief to be gained thereby with the additional relief that might be afforded by a material increase in the per diem car rental charge assessed by the carriers in their interchange agreements."

LONG-BELL COMPANY ADVANCES WAGES.

An associated press despatch in the Chicago papers last Thursday stated that on November 22 the Long-Bell Co. made a voluntary advance in wages to its employees at the eleven plants of the company located in Missouri, Texas, Louisiana and Arkansas. The advance, it is said, involves a total increase of $250,000 a year in wages.

The company held the annual conference of its officials and mill managers at Beaumont, Tex., on Monday and Tuesday of this week. Among those who were in attendance from Kansas City were Robert A. Long, chairman of the board; F. J. Bannister, president; J. D. Tennant, vice-president; F. L. Tyner, secretary to the vice-president; R. S. Davis, traffic manager; J. H. Bester, manager of the mercantile department; M. E. Stone, assistant manager and W. O. Burgess, general auditor. The officials of the company had been making their annual visit to the various manufacturing plants and after visiting them assembled at Beaumont for a general conference. The mill managers who were present were the following: C. H. Dodd, Hudson River Lumber Co., DeRidder, La.; Roy F. Morse, Ludington Lumber Co., Ludington, La.; W. L. Prickett, King-Ryder Lumber Co., Longville, La.; J. H. Kennesson, Rapides Lumber Co., Woodworth, La.; J. M. Sowards, general manager mill operations, Pine Bluff, Ark.; C. H. Murphy, manager hardwood manufacturing department, Pine Bluff, Ark.; Samuel T. Woodring, Calcasieu Long Leaf Lumber Co., Lake Charles, La.; George Hays, Fidelity Lumber Co., Doucette, Tex., and S. M. Morris, Lufkin Land & Lumber Co., Lufkin, Texas.

The store managers in attendance were the following: J. H. Derks, Longville; Victor Martin, Bonami; A. A. Bass, Sweetville, La.; C. L. Riddle, Ludington; Ray Thomas, Hoy, La.; W. E. McNair, Woodworth; J. H. Leach, Pine Bluff; H. L. Sanders, Doucette; Roscoe Perry, Lufkin.

BUSINESS CONDITIONS IN AND ABOUT BEAUMONT.

Although most of the sawmills in the Beaumont district are still curtailing their production because of the shortage of cars, order files continue to pile

Digitized by Google

up, with no prospects for delivery within any specified time.

But during the past three or four months the sawmills have had one good customer, and they appreciate him. He has been their salvation. His name is Uncle Sam. Scarcely a day passes but that a contract for lumber is awarded for the army along the border. Only recently more than 1,000,000 feet of lumber was purchased for bridging the sand holes and the mudholes between Columbus, N. M., and Major General Pershing's army headquarters down in Mexico. This lumber was all 3 x 12 and of the best grade. There have been other big orders for lumber for flooring for the soldier boys' tents, for hospitals, mess halls and kitchens. It is estimated that the government will have to purchase upward of 50,000,000 feet of lumber before the little job down along the border is completed. The government placed one order with a Beaumont concern for 60,000 cross ties. It is thought that this was a preparedness measure.

BROOKMIRE'S ANALYSIS AND FORECAST

The analysis of financial and manufacturing conditions issued by the Brookmire Economic Service, of 36 Pine street, New York, November 20, notes a tendency to strength in the stocks of companies producing raw material and to heaviness in the stocks of companies which must buy that raw material. In Brookmire's opinion, the possibilities of a general bull market, even in industrial stocks, exclusive of the rails, is pretty well exhausted. Any further movement will have to discount not only the general increase of prosperity, but the shifting of profits on to steel, copper and oil companies and to such other manufacturing stocks as are able to furnish their own raw material.

After a thorough survey of the market Brookmire makes the deduction that any further participation in speculation should be undertaken only on extremely large margins by those who are willing to take chances on heavy losses and who will be satisfied with moderate profits. He expresses the opinion that the shifting of profits from the manufacturers who must buy their raw material over to those who furnish their own raw material, will be worse next year, as prices are already tremendously higher than they were last year and the accumulated supplies bought at the lower prices are getting exhausted. Brookmire advises his clients to determine accurately as soon as possible how much manufacturing costs have been increased and to have back of their selling policy the motto, "Get a fair profit or do not take the business." This motto might be applied with propriety to the lumber trade almost any time, but more particularly now.

A SOLID TRAINLOAD OF IDAHO WHITE PINE.

The Rutledge Timber Co. of Coeur d'Alene, recently shipped probably the most valuable trainload, consisting of forty cars, of lumber ever transported by a railroad. This lumber was consigned to the Eastern Lumber Co. at Tonawanda, New York. The train will be unloaded at Superior, and the remainder of the journey made by boats on the Great Lakes.

The cars contained upward of 1,000,000 feet of number three grade and better. The train was rushed through to its destination and special arrangements were made for its handling.

The cars were decorated with large banners bearing in huge letters the slogan "Genuine Old Fashioned White Pine—And Plenty Of It." It is a significant fact that the lumber will be sold to New Englanders, the first users of the "old fashioned white pine."

"In some sections the idea has become prevalent that it is impossible to secure white pine," stated L. R. McCoy, sales manager of the Rutledge company. "This train will help to correct this erroneous impression." The Edward Rutledge Timber Co. has a very large and luxuriant tract of white pine that it is just starting to put on the market. Consequently, it will be able to supply its customers for another thirty years with genuine old fashioned white pine, which is being sold under the trade name of 'Marble Creek Idaho White Pine.' "

The first homes in America were built of white pine. As the demand for this universal building material became greater, mills were constructed in Michigan, Wisconsin and Minnesota. White pine advanced in price in New England as it became necessary to transport lumber from the western states. Substitutes were offered in an attempt to replace white pine, and succeeded in some cases.

But now, after three centuries' experience in home building, in spite of the increasing cost of white pine in New England, due to the necessity of hauling it across the continent, New England consumers demand Idaho white pine. They know from experience that white pine surpasses all other woods and wood substitutes for exterior finish, interior white enamel finish and miscellaneous uses.

A NEW YELLOW PINE MANUAL.

New Orleans, La., Nov. 21.—The new Southern Pine Association "Manual of Standard Wood Construction" has been completed, and is now being distributed. It has been the idea of the association in this little volume to give only such information as will be of vital interest and help to engineers, architects and builders. The work contains information not to be found in other publications, and among its features are:

Safe loads for beams and columns of yellow pine.

Moments of resistance in yellow pine beams.

Maximum spans for yellow pine mill and laminated floors.

Formulae and diagrams for flexure, shear and bending moment in yellow pine beams.

Formulae and examples for figuring and tables of safe loads in yellow pine trussed beams.

Tables on the physical properties of yellow pine, treated and untreated, taken from various bulletins of the Forest Products Laboratory and the University of Illinois.

It contains the new "density rule" governing southern yellow pine timbers, allowable working stresses from various building codes, weights of southern yellow pine and various other materials, and tables of board measure.

The work will be found handy, complete and accurate for ready reference and a few practical examples will help those without technical education to figure stresses for themselves.

It is handsomely bound in leather and will be a valuable addition to any technical library. Letters to 5,000 architects, engineers and builders were sent out by the association a week ago, asking whether they desired a copy of the work, and since that time 1,500 replies have been received, all heartily endorsing the work, and requesting that the senders be furnished with one or more of the pamphlets.

NATIONAL CHAMBER OF COMMERCE CONSIDERING RAILROAD PROBLEMS.

Washington, D. C., Nov. 18.—The lumber and other industries were presented here yesterday and today at the special meeting of the National Council of the Chahber of Commerce of the United States, called to discuss various phases of the railroad situation as it confronts the business men of the country.

Among those here representing the lumber and allied interests were: R. S. Kellogg, secretary of the National Lumber Manufacturers' Association; D. O. Anderson, of the North Carolina Pine Association; William H. Judd, of the Lumber Dealers' Association of Connecticut; B. W. Lord, of the National Veneer & Panel Manufacturers' Association; E. H. Defebaugh, representing the Tight Barrel Stave Manufacturers' Association and the Western Cigar Box Manufacturers' Association, and John Foley, of the American Wood Preservers' Association.

Because of his official position as vice-chairman of the Joint Congressional Committee on Interstate Commerce, which next week will start hearings on the railroad situation, the talk of Representative William C. Adamson, of Georgia, yesterday was perhaps of greatest interest.

"Congress, in my opinion, will not wait for the report of the joint committee on commerce, which will begin to deal with the railroad question at hearings at the capitol on Monday," said Judge Adamson.

Mr. Adamson said that if government ownership is argued for before the committee it will be on a theory that government regulation has been a failure. Government ownership, he said, would mean the complete subjugation of the government to the railroads. He pointed out that the railroads if capitalized at $25,000,000,000, would require a sum of money for their purchase utterly beyond the power of the government to furnish. Speaking of the present situation, Judge Adamson said:

"Both railroad capital and railroad labor in this controversy seem to forget their masters, the public. They forget they are public servants, and that they cannot have a fight in the street which will halt interstate commerce. If they do forget it, congress will have to remind them of what their duties are, and when congress does step into the arena it will not do so as a partisan of either side, but in a way that will control the whole situation in the interest of the general public."

Judge Adamson said that he thought it probable that congress will extend the time for the filing of the report of the joint committee on commerce and renew the appropriation for the committee, if it finds that the committee cannot complete its work in the short time allowed between now and January 8, by which time congress specified the report should be made.

Speaking of the eight-hour law, of which he was the author, and which was attacked by one of the speakers at the meeting, Mr. Adamson maintained that congress was acting entirely within its rights in the regulation of interstate commerce when it passed the law, and that there is no doubt of its constitutionality.

He urged that the plan offered by Dr. Charles R. Van Hise, president of the University of Wisconsin, and an expert on traffic matters, for the creation of a wage commission would not meet with the approval of the railroads themselves.

Congress is able to control the situation without a specially appointed commission and without government ownership, Judge Adamson said, and when both sides to the controversy seem to consider only their own selfish interests, and forget that they are working for the public, it is possible for congress, through proper legislation, to fix their duties and rights in the interest of the public.

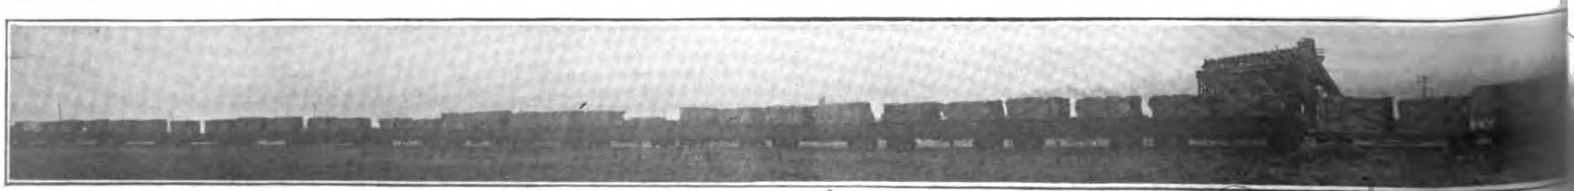
Dr. Van Hise traced the history of organized labor and the relation to it of the railroad employees, and was enthusiastically applauded when he said that the interest of the public in the question of whether or not there shall be strikes on the railroads is paramount.

Solution of the railroad situation can be found, Dr. Van Hise said, by amendment to the Newlands act, and by enlarging the powers of the Interstate Commerce Commission, or the creation of a wage commission. Such a commission, after complete investigation by experts on the situation, would be able, he thought, to make recommendations based on absolute knowledge of the situation.

He urged regulation for all; not a system whereby the railroads, regulated, would be dealing with a highly organized body, operating under a system of free contract and unhampered by the restrictions laid upon the railroad managers.

If the railroads are controlled in their charges, said Dr. Van Hise, if the public has to pay, regulation should go to its logical conclusion and decide what is a just wage, as well as what is a just charge. This might be done, he suggested, by creating a wage commission or a division of the Interstate Commerce Commission. Then there could be a set of experts and statisticians at work all the time, considering the expenses of the railroads, wages, the cost of living, and a comparison of these with other lines of industry, in determining what is a just wage and working hours.

Other speakers included: R. Goodwyn Rhett, president of the Chamber; Charles Nagel, former Secretary of Labor; Alfred P. Thom, general counsel of the Railway Executives Advisory Committee; Harry A. Wheeler, of Chicago, and many other prominent men.



A TRAINLOAD OF FORTY CARS OF MARBLE CREEK IDAHO WHITE PINE CONSIGNED BY THE RUTLEDGE TIMBER

Digitized by Google

LITTLE LEGISLATION PLANNED FOR THE SHORT SESSION OF CONGRESS.

Washington, D. C., Nov. 20.—Congressional leaders have been gathering here during the past few days for conferences preliminary to the opening of the final session of the Sixty-fourth Congress, prepared to advise President Wilson against attempting an extensive legislative program during the next three months. Despite the fact that the house in the next congress may be so narrowly divided as to prevent Democratic control, the administration leaders, headed by Speaker Champ Clark, are opposed to any effort to attempt elaborate general legislation during the session beginning December 4. They assert that the brief session, which will close with the expiration of the congress on March 4, 1917, will not allow time for extensive legislative struggles.

Conferences among the leaders who have reached Washington, including Speaker Clark, Representative Fitzgerald, chairman of the house appropriations committee; Representative Garner, of Texas, of the ways and means committe, and Senator Stone of Missouri, have reached a conclusion that the routine work of the session should be hurried through, and general legislation left for the next congress, despite the dispute over control of the next house.

"The short session is upon us," said Speaker Clark Saturday, "and it will allow us barely time to pass the appropriation bills before we have to dissolve the congress. We will have no time for elaborate legislative efforts. Of course, it is probable that we will have to take up the threatening railroad situation just as soon as congress convenes, and make some disposition of the eight-hour day problem."

CALIFORNIA LUMBERMEN PROTEST AGAINST INCREASE IN INSURANCE RATES.

San Francisco, Cal., Nov. 20.—California lumbermen who recently protested against the enforcement by the state of a new minimum rate schedule for industrial accident insurance have taken recourse to the courts and have secured a temporary injunction restraining State Insurance Commissioner J. E. Phelps from canceling policies carried with the Guardian Casualty & Guarantee Co. at rates declared to be much lower than those named by the state. Under an order issued by Commissioner Phelps the insurance company would have been compelled to cancel many policies that have two years in which to run, and to issue new ones, providing its clients agreed, at increased rates. The temporary restraining orders were issued by Superior Judge Cabaniss, of San Francisco, and will be in effect until the matter can be settled in the courts. The companies which secured the injunctions were the Madera Sugar Pine Co., the California Door Co., the Diamond & Caldor railway and the Caspar Lumber Co.

The actions started by the lumber companies set forth the fact that they contracted with the Guardian Casualty & Guarantee Co. for compensation insurance for all of their workmen for a period of three years, the rate to be paid varying with the character of the work. The Madera Sugar Pine Co. claims that the minimum rate established by Commissioner Phelps is about double the rate it is now paying, and that if the order is enforced it will be called upon to make an additional expenditure of $7,500 a year. The California Door Co. claims that its rates would be increased fourfold, and the Caspar Lumber Co. makes the same claim.

NATIONAL WHOLESALERS PROTEST.

W. S. Phippen, traffic manager of the National Wholesale Lumber Dealers' Association, New York, announces that his association has filed a formal protest with the Interstate Commerce Commission against the proposed demurrage tariffs announced by the railroads to become effective December 1. The association petitions for the suspension of the tariffs pending hearing and investigation.

October Building Statistics Show Large Gain.

The compilation of building permits from 111 of the principal cities in the United States during October, according to the American Contractor of Chicago, aggregated 86,128,865 as compared with 67,882,891 in October, 1915, which is an increase of 27 percent. It is also an increase of nearly $14,000,000 over the September total, or 20 percent. In seventy-four of the cities from which figures are given there are gains shown, while in the remaining thirty-seven cities there are losses. Among the larger cities in which the gains are pronounced are Boston, Mass., 56 percent; Cleveland, Ohio, 70 percent; Detroit, Mich., 20 percent; Los Angeles, Cal., 79 percent; Louisville, Ky., 18 percent; Memphis, Tenn., 94 percent; Milwaukee, Wis., 157 percent; New Orleans, La., 85 percent; New York City, 27 percent; Philadelphia, Pa., 36 percent; Portland, Ore., 230 percent; Seattle, Wash., 243 percent; St. Louis, Mo., 10 percent; St. Paul, Minn., 146 percent.

The Latest News from Washington

Lumber World Review, Washington Bureau, 208 District National Bank Building

L. M. LAMM, Staff Correspondent

PASSAGE OF THE WEBB BILL ALMOST CERTAIN.

Washington, D. C., Nov. 21.—Lumbermen in particular and other exporters in general are perhaps more especially interested in the so-called Webb bill, "to promote export trade, and for other purposes," than in any other bill which is now pending before the Congress of the United States, to convene on December 4, according to law.

The Webb bill, as is so generally known, has already passed the house, practically without amendment, and is now pending before the judiciary committee of the senate. An effort was made during the closing hours of the last session of congress to have the bill added as an amendment to the general revenue bill, but Senator La Follette and several others threatened a filibuster if this was attempted. Those most interested in the bill, therefore, gave up their attempt to put the bill through the senate in this way.

It seems hardly possible that this bill can fail to pass the coming short session of congress. It is undertood that the president is entirely favorable to the bill, it has been backed by the Federal Trade Commission and the Department of Commerce is in favor of it. As a matter of fact, Secretary of Commerce Redfield, in a conversation a few days ago with your correspondent, expressed the hope that it might be put through, and seemed to see no great drawback to its going through at this session.

At this time, owing to the fact that few of the congressmen have returned yet, it is impossible to say when any hearings will be held before the judiciary committee of the senate, if any are to be held.

In connection with this bill the report which the Federal Trade Commission made to congress last May on co-operation in American export trade is certainly of interest to show now nearly the bill "jibes" with what the commission recommended. In part, the commission said:

"Two chief dangers from co-operative organizations of American manufacturers and producers are apparent. They may be used to exploit the home market, and they may be used unfairly against individual American exporters in foreign trade. The dangers in co-operative action must be faced frankly and provided against fully.

"The commission is confident that this can be done without sacrificing the essential advantages of joint action and without altering the policy of the anti-trust laws, or interfering with their enforcement. Thus specific extension of the law prohibiting unfair methods of competition to export trade and requirement of full reports to the Federal Trade Commission from co-operative export organizations will protect the individual exporter, while the enforcement of the anti-trust laws will prevent the use of such organizations to effect restraint of trade or monopoly in the domestic market.

"The commission does not believe that congress intended by the anti-trust laws to prevent Americans from co-operating in export trade for the purpose of competing effectively with foreigners, where such co-operation does not restrain trade within the United States, and where no attempt is made to hinder American competitors from securing their due share of the trade. It is not reasonable to suppose that congress meant to obstruct the development of our foreign commerce by forbidding the use, in export trade, of methods of organization which do not operate to the prejudice of the American public, are lawful in the countries where the trade is to be carried on, and are necessary, if Americans are to meet competition there on equal terms." And in conclusion, the commission said:

"By its investigation the commission, however, has established the fact that doubt as to the application of the anti-trust laws to export trade now prevents concerted action by American business men in export trade, even among producers of non-competing goods. In view of this fact, and of the conviction that co-operation should be encouraged in export trade among competitors, as well as non-competitors, the commission respectfully recommends the enactment of declaratory and permissive legislation to remove this doubt.

"The commission feels that it would fail of its duty if it did not urge the pressing need of such action immediately. If American business men are to make the most of the great opportunities now before them, are to build securely in foreign trade, and are to avoid disaster in the shock of the stern and determined competition that will doubtless follow the war, they must at once perfect the organization demanded by the conditions of international trade."

NATIONAL LUMBER MANUFACTURERS' ASSOCIATION TO HAVE HEARING.

Washington, D. C., Nov. 20.—R. S. Kellogg, secretary of the National Lumber Manufacturers' Association, at the initial hearing of the so-called Newlands railroad investigation committee asked that a hearing be granted the National association. This will be done, but the date for the hearing has not yet been announced.

Senator Newlands, chairman, in his statement at the beginning of the hearing, outlined the scope of the inquiry, which, as described by him, is to be of the widest. That the committeee is to go into every phase of the transportation question was emphasized by Senator Newlands. Rail, ocean and river transportation, railroad credit, national incorporation, federal control of securities, federal control as against state control, and a careful inquiry into government ownership, are among the subjects ahead of the committee.

GOVERNMENT GAINS IN THE ADMINISTRATION OF THE FOREST.

Washington, D. C., Nov. 20.—In administering the laws relating to the national forests the government recovered $29,154, on account of trespass and collected fines to the amount of $425, according to the annual report of the solicitor of the Department of Agriculture.

In addition to the cases involving money penalties, the department handled 590 cases, involving about 200,000 acres of lands in national forests, claimed under the homestead, timber and stone, mineral, railroad and other land laws. As a result of the 130 decisions for the government, approximately 108,409 acres of land, supporting a stand of more than 240,000,000 feet of timber, valued at more than $400,000, were retained in the national forests.

NATIONAL RIVERS AND HARBOR CONGRESS TO CONVENE AT CAPITAL.

Washington, D. C., Nov. 22.—The thirteenth annual convention of the National Rivers and Harbors Congress is to be held in this city on December 6, 7 and 8, according to an announcement just made.

Although the program has not been completed it is said that some of the most prominent men interested in water way affairs in this country will be among the speakers. In addition to the arranged addresses, important questions will be presented for general discussion by the delegates.

INTERSTATE COMMERCE COMMISSION OPINIONS

Monday, November 20, was the last date on which briefs could be filed by lumber interests in the general lumber investigation, No. 8131. No brief was filed by the National Lumber Manufacturers' Association, because, it is understood that the officials felt that inasmuch as so many of the member associations were entering the case there was no necessity for a brief from the association. Unless the commission should extend the date, therefore, all of the briefs on behalf of the lumber industry are now in the hands of the commissioners. A great deal of interest centers in the argument to be held here about the middle of next month, and it is expected that a number of the most prominent lumbermen in the country will attend the arguments.

The Interstate Commerce Commission has just issued an announcement in the Tap Line case, in which it dismisses the Kentwood & Eastern Railway Co. as a party to the case.

The commission states that the railway company has been dismissed as a party to the Tap Line case because the relationship which existed between it and the proprietary lumber company, the Brooks-Scanlon Co., has entirely changed. In part, the announcement says:

"That on and after July 1, 1916, as the result of various exchanges, purchases and transactions, D. F. Brooks and his associates became the sole owners of the entire capital stock and property rights and interest of the Kentwood & Eastern Railway Co., and that M. J. Scanlon and his associates became the sole owners of the entire capital stock, property, rights and interests of the Brooks-Scanlon Co."

INTERSTATE COMMERCE COMMISSION HEARINGS

Following are the arguments and hearings in lumber cases on the commission's docket between now and the time of our next edition:

November 27, at Little Rock, Ark., before Examiner Bell, in case No. 8711, of the Crescent Lumber Co. vs. the Arkansas & Louisiana Midland Railway Co., et al.

November 27, at New York city, before Examiner Money, in case No. 9082, of the National Wholesale Lumber Dealers' Association vs. the Louisville & Nashville, et al.

November 27, at Seattle, Wash., before Examiner Gartner, in I and S docket, No. 925, concerning Calumet, Mich., lumber rates.

November 28, at Seattle, Wash., before Examiner Gartner, in case No. 8990, of the A. W. Miller Sawmill Co. vs. the Chicago, Milwaukee & St. Paul, et al.

December 4, at Kansas City, Mo., before Examiner Wood, in case No. 9063, of the Hudson River Lumber Co. vs. the Louisiana & Pacific, et al.

December 4, at San Francisco, Cal., before Examiner Gartner, in I and S docket No. 912, concerning forest products rates from stations in Nevada.

December 6, at San Antonio, Tex., before Examiner Brown, in case No. 9159, of the Eagle Pass Lumber Co. vs. the Galveston, Harrisburg & San Antonio, et al.

December 7, at Chicago, Ill., before Examiner Worthington, in case No. 8587, of the Marsh & Truman Lumber Co. vs. the Louisville & Nashville, et al.

December 8, at Washington, D. C., an argument before the commission, in case No. 6747, of the Himmelberger-Harrison Lumber Co. vs. the St. Louis & San Francisco, et al.

INTERSTATE COMMERCE COMMISSION SUSPENSION ORDERS.

The commissioners have suspended until March 5, 1917, the operation of certain schedules appearing in supplement No. 9, to Agent R. H. Countiss, I. C. C. tariff No. 1011.

The suspended schedules provide for increased commodity rates on lumber, carloads, from points of origin in California to all destinations in eastern Colorado located on the Chicago, Burlington & Quincy east of Brush and Sterling, Colo. The present rate is 40 cents, and the proposed rate is 50 cents per 100 pounds.

The commissioners have suspended until March 18, 1917, the operation of New Orleans, Texas & Mexico Railway I. C. C. tariff No. A-232.

The suspended tariff names proposed increased rates on lumber, carloads, from certain points of origin in Texas and Louisiana to Beaumont, Tex., for export or coastwise movement. The increases proposed are about one cent per 100 pounds higher

Personal News Notes

The W. L. Joyce Co., a wholesale lumber concern in Minneapolis, Minn., has opened branch offices in Chicago at 505 Chamber of Commerce building. The Chicago branch is in charge of E. J. Brady.

R. W. Franklin, of Spokane, Wash., traffic manager of the Western Retail Lumbermen's Association, arrived in Chicago Wednesday of this week while on a visit to several eastern trade centers. He spent a few days in St. Paul and Minneapolis and will cover several of the cities further east before returning to Spokane.

C. F. Yegge, of the Chicago Mill & Lumber Co., Conway building, this city, has been elected president of the Evanston Golf Club. It is stated that Mr. Yegge intends to interest his fellow box manufacturers in a tournament on the grounds at Evanston next spring.

The National Lumber Manufacturers' Association has engaged George H. Cless, Jr., a graduate of the New York State College of Forestry, at Syracuse, to take charge of the exhibit of lumber and its uses in the permanent lumber exhibit installed in the Insurance Exchange, Jackson boulevard and Sherman street, this city.

W. P. Anderson, of the Gideon-Anderson Lumber & Mercantile Co., St. Louis, Mo., with hardwood mills at Gideon, Mo., was in Chicago recently on his return from Battle Creek, Mich., where he had been recuperating in a sanitarium for several months. He told his Chicago friends that he was feeling much improved in health as the result of his rest and treatment.

Frederick T. Boles, president of the Lord & Bushnell Co., wholesale lumber, foot of Laflin street, this city, was nominated on Thursday last for director at large of the Chicago Association of Commerce, being one of the five composing the directorate, and his nomination is equivalent to election. This will be a purely formal proceeding and will take place December 13. Mr. Boles is one of the most progressive lumbermen of Chicago and his active affiliation with the Chicago Association of Commerce means much to that organization and to business interests of the city.

Ralph Lowe, Jr., assistant secretary of the S. A. Woods Machine Co., manufacturers of woodworking machinery of the first grade, the executive offices and works of which are at Boston, Mass., is making a circuit of the country, visiting the various branch offices of the concern. During his trip Mr. Lowe has visited the Chicago, Norfolk, San Francisco, New Orleans and Seattle offices. The S. A. Woods Machine Co., whose engineers have given much study to the increased output from the point of view of the mill owner, is to enlarge its plant to meet the increasing demands of its ever growing business.

D. B. McMullen, of Cadillac, Mich., son-in-law of the late Fred A. Diggins, of that city, is intending to move with his family on December 1, to Minneapolis, Minn., where he will represent the Cadillac Auto Truck Co., of Cadillac, in which he is extensively interested. To better handle the Cadillac business Mr. McMullen has incorporated the Acme Auto Truck Sales Co., which will act as the northwestern distributer of the Cadillac trucks and has established headquarters at 917 Hennepin avenue, Minneapolis. Mr. McMullen is intending to devote a good deal of his attention to the lumber trade of the northwest as an outlet for his trucks, as he has been more or less associated with the industry for some years. He is a nephew of D. H. McMullen, a well known Minneapolis lumber dealer.

W. E. DeLaney, of the Kentucky Lumber Co., Lexington, Ky., was in Chicago this week and went from here to Memphis on business for his company. Mr. DeLaney says that the only restriction on his hardwood trade at the present time is the shortage of cars. He does not feel this so much at the Kentucky operations of his company as he does at the mills in Alabama, where only a small percentage of the car requirement can be secured. He reports a splendid demand for common oak in ties and structural material and says that prices are considerably improved. He recently filled a large order for crating stock from one of the big Pennsylvania industries, on which the price was not so much a factor as the delivery of the lumber within a stated time. In his opinion the car shortage is likely to become even more serious than it is today and the prices of lumber are therefore apt to further advance. In his opinion, also, there will be little falling off in the hardwood lumber demand or prices until the car situation is relieved.

OBITUARY

DEATH OF CHARLES P. MILLER.

Charles Porter Miller, vice-president of the Mississippi Lumber Co., of Chicago and Quitman, Miss., died at his residence, 5650 Dorchester avenue, Chicago, Sunday, November 12, from heart trouble. Mr. Miller had been ill for nearly five years, but had been able to attend to business at intervals. He took a great deal of outdoor recreation, such as golf and motoring and was able to travel to some extent. During the latter part of October he removed from his former home, 5625 Woodlawn avenue, to a new apartment building on Dorchester avenue, and a shock he received in the death by accident of a little boy, the son of a neighbor and to whom he was much attached, no doubt augmented his complaint.

Mr. Miller was one of the veteran lumbermen of Chicago. He came to this city in 1879 and was employed by the lumber firm of A. A. Gray & Co. He became associated in 1881 with T. H. Sheppard & Co. and remained with that concern as employe and partner until 1894, closing up the business after Mr. Sheppard's death in 1893. In 1895 he embarked in business with Perley Lowe and William Templeton under the firm name of C. P. Miller & Co., and for several years operated a saw mill at Merrill, Wis., but later joined Messrs. Lowe, Templeton and Charles F. Thompson in the Mississippi Lumber Co. and until his health began to fail he took an active part in the conduct of that extensive business.

The deceased possessed a sterling, irreproachable character and was greatly esteemed by all with whom he came in contact and stood high in lumber and business circles generally. He was born in Greenwich, N. J., July 22, 1849, and was the son of Edwin F. and Elizabeth Porter Miller. His education was secured at Union Academy, Shiloh, N. J. His early life was spent on a farm at Greenwich. Upon completing his education he became an employee of the Central Railroad of New Jersey, with which he was connected until his removal to this city. He is survived by his widow and a daughter, Margaret. The funeral services were held from the family residence on Thursday, November 14, and the interment was at Oakwoods.

R. W. ENGLISH.

The death is announced of Robert W. English, president of the R. W. English Lumber Co., of Denver, Colo., which occurred at his home in that city November 13. Mr. English was born in Erie, Pa., in 1845. He removed with his parents to Bloomington, Ill., when a youth and in 1861 enlisted in the army with the Sixty-eighth Illinois Volunteer Infantry and served until 1865. When he was mustered out he came to Chicago and went into the lumber business and remained here until 1888, when he went to Denver and organized the R. W. English Lumber Co.

Mr. English was a prominent member of the lumbermen's order, the Hoo-Hoo, which he joined in the first year of its existence, and always took an active interest in the affairs of that organization. He almost invariably attended the annual meetings of the order and was accompanied by his family. He was also prominent in Masonic circles and his funeral was conducted under the auspices of that order. Mr. English is survived by his wife and daughter, Miss Gertrude, and a son, Harry J. English.

HOW TO LAY OAK FLOORS.

The principle of delivering service, and so selling merchandise that re-orders will come in from satisfied consumers, which is spreading like wild-fire through the lumber industry, has reached the Oak Flooring Manufacturers' Association, with the result that a bulletin has been issued by that association, prepared by W. L. Claffey, of this city, to educate workmen in the proper laying of oak floors. The use of bone-dry flooring is the first requisite to a good job, damp proof and sound-proof paper or felt is recommended to go between the sub-floor and the surface floor, and care in the proper laying of the sub-floor is essential to a good finished floor. Proper nailing and finishing are also discussed.

Business Changes, Incorporations and Fires

New Concerns

Trussville, Ala.—The Patton Sawmill Co.; $2,000 capital. R. F. Manly, president; C. F. Manly, vice-president and treasurer.

Toledo, O.—The Acorn Supply Co., to deal in lumber; $30,000 capital. E. B. Mitchell and D. D. Gottschall.

Redwood, Miss.—The Mound Tie Co.; $3,000 capital. Edward Y. Smith, Irene W. Smith, both of Vicksburg, and J. Gilbert Burton, of New Orleans.

Richmond, Va.—The Virginia Timber Corporation; $100,000 capital. J. Pope Nash, president; Jonathan Bryan, vice-president; George J. Benson, secretary-treasurer.

Tulsa, Okla.—The F. S. Miller Lumber Co.; $50,000 capital. F. S. Miller, Tulsa; H. C. Miller, Vinita; E. A. Miller, Seneca, Mo.

Bremerton, Wash.—The Bremerton Mill Co.; $50,000 capital. H. J. Bailey, M. Francis Kane, Lorence Fetcher, W. M. Mahaffie and K. C. McNeill.

Memphis, Tenn.—The Tensas Land & Lumber Co.; $25,000 capital. O. T. Woodard, T. T. Rebori, C. L. Smith, A. R. Woodard and John Von der Bruegge.

Wilmington, Del.—The Blue Hen Lumber Co.; $150,000 capital. J. Paul Cranston, Clifford V. Mannering, Charles W. Bush, all of Wilmington.

Wilmington, Del.—The Greenwood Lumber Co.; $50,000 capital. J. Paul Cranston, Clifford V. Mannering, Charles W. Bush, all of Wilmington.

Oklahoma City, Okla.—The Van Deren Lumber & Grain Co.; $10,000 capital. E. A. Van Deren, Edward Spiers, S. K. Bernstein.

Washington, Ind.—The Plainville Cooperage Co.; $3,000 capital. Frank Cummins, C. L. Cummins and Ethel M. Cummins.

Lebanon, Ky.—The Lebanon Flooring Co.; $5,000 capital. John L. Powell, Hugh Murray and C. C. Matson.

Climax, Ga.—Peacock-Napier Co.; $60,000 capital. A. Peacock and J. W. Napier.

Savannah, Ga.—A. S. Bacon & Sons, $150,000 capital. A. S. Bacon, Hal H. Bacon and Oliver T. Bacon.

Flint, Mich.—Michigan Lumber & Fuel Co.; $30,000 capital.

Port Angeles, Wash.—Sunset Timber & Shingle Co.; $10,000 capital. W. H. Phillips, Charles M. Wirges and Nora Wirges.

Marysville, Wash.—Royal Cedar Co.; $10,000 capital. J. J. Hatton, George Davis, Fred Hovlik, Gus Lundgren, W. T. Weed, Charles Lee, Bruce Hatch and James Bedford.

Celina, O.—The Celina Sawmill Co.; $10,000 capital. John P. Diener and others.

Portland, Me.—J. H. Hamlen & Son; $450,000 capital. C. P. Shilstone, 11 Broadway, New York, N. Y., representative.

Portland, Me.—Wood Products Chemical Co.; $500,000 capital. Dennis A. Meaher, Robert E. Ahren, Frank B. Fish and others.

Crothersville, Ind.—The A. W. Benham Cooperage Co.; $10,000 capital. A. W. Benham, F. C. Mitchell and H. W. Benham.

Portland, Ind.—The Sheller Wood Rim Manufacturing Co.; $25.000 capital. H. E. Sheller, E. J. Minch and A. S. Blowers.

Buchanan, Mich.—The Home Lumber & Coal Co.; $15,000 capital.

South Stillwater, Minn.—The Andersen Retail Lumber Co.; $100,000 capital. H. J. Andersen, president; F. C. Andersen and J. B. Weisser, secretary-treasurer. This concern has yards at South Stillwater, Copas and Marine, Minn., and Dwight, Wis.

Grand Rapids, Mich.—Veit Manufacturing Co.; $30,000 capital.

Omaha, Neb.—Fowler Box & Cooperage Co.; $50,000 capital.

Fayetteville, N. C.—Carolina Woodenware Co.; $50,000 capital. H. W. Lilly, president; John F. Harrison, vice-president, and J. C. Cowell, secretary.

Warren, O.—Crystal Supply Co.; $5,000 capital. L. D. Sheffield, R. F. Lintz, H. L. King, B. J. Shafer and H. F. Weir.

La Grange, Ore.—La Grange Lumber & Milling Co.; $10,000 capital.

Ripley, Tenn.—Hall's Hoop Co.; $6,000 capital. W. C. Potter, H. C. Darby, E. A. Ferguson and others.

Tacoma, Wash.—Pacific Coast Shipbuilding & Dry Dock Co.; $500,000 capital. J. H. Hyde and associates.

New Mills

Moscow, Ark.—W. S. Elder, of Sheridan, has purchased timber rights on 760 acres, and will build a small mill.

Lake Providence, La.—O. T. Woodard, of Memphis, Tenn., has purchased 5,818 acres of timber, and will erect a band sawmill of 30,000 feet daily capacity.

Louise, Miss.—The Bellgrade Lumber Co., of Memphis, Tenn., is planning erection of sawmill with daily capacity of 50,000 feet.

DeKalb, Tex.—Lee Rosenberg, of Texarkana, Ark., has purchased 3,000 acres of hardwood timber, and will build a sawmill.

Midland, Wash.—The Midland Lumber & Investment Co., whose plant was destroyed by fire early in September, will rebuild. The new plant will have a daily capacity of 100,000 feet.

Baker, Ore.—The Pacific States Investment Co., which recently purchased 124,000,000 feet of government timber on the middle fork of the John Day river, will erect a large sawmill at once.

Phelps, Wis.—The Hackley-Phelps-Bonnell Co. will immediately rebuild its sawmill, which was recently burned.

Antigo, Wis.—It is reported that the Charles W. Fish Lumber Co., of Elcho, Wis., will erect a band mill here, with a capacity of 8,000,000 feet annually.

Norfolk, Va.—The J. E. Etheridge Lumber Co. has prepared plans for a new planing mill, 100 x 132 feet; nearly all Yates machinery.

Business Changes

Crawfordsville, Ind.—The Mercer-Winchel Lumber Co. has changed its name to Montgomery County Lumber Co.

Watertown, Wis.—The Barker Lumber & Fuel Co. has purchased the Casco, Forestville and Maplewood lumber yards of the Sawyer Lumber Co., of Sawyer.

La Crosse, Wis.—The C. L. Colman Lumber Co., of La Crosse, has purchased a chain of four lumber yards, from the Bekkedal Lumber Co., of Viroqua. The yards are located at Viroqua, Westby, Rockland and Boscobel.

Kingsville, Tex.—The Kingsville Lumber Co. has increased its capital from $20,000 to $100,000.

Prescott, Ariz.—The Clark & Adams Co. has sold out to Montgomery & Mullin Lumber Co., of Los Angeles, Cal.

Walker, Kan.—The Walker Lumber Co. has sold out to the Logan-Moore Lumber Co., of Kansas City, Mo.

Cainsville, Mo.—The F. M. Roberts Lumber Co. has sold out to Drury & Casteel.

Beaver Falls, Pa.—Rhodes & Garvin have changed name to R. C. Garvin & Son.

Dublin, Ga.—Georgia Veneer & Lumber Co. now Dublin Veneer Co.

Winnebago, Ill.—The Winnebago Grain & Lumber Co. has sold out to the Midland Lumber Co., of Freeport.

Irma, Ala.—P. J. Hardy has sold out to the Farmers' Mutual Lumber Co.

Huntington, W. Va.—The Lumber Manufacturers' Agency has been succeeded by Bosley, Thurmond & Waldrop.

Tonasket, Wash.—The Tonasket Lumber Co. has sold out to the Columbia Valley Lumber Co.

Reidville, N. C.—J. B. Watkins, jr., has sold out to Rogers & Cook.

Sodus Center, N. Y.—Coleman & Webber now Webber & Metz.

Red Cloud, Neb.—The Malone-Avery Co. is now the Malone-Gellatly Co.

Chicago, Ill.—The W. L. Joyce Co., of Minneapolis, Minn., has opened an office at 133 West Washington stret, this city.

Doon, Iowa.—The Joyce Lumber Co. has sold out to Schoeneman Bros. Co.

Sylvia, Kan.—The Houston-Doughty Lumber Co. has sold out to the D. J. Fair Lumber Co.

Hodgenville, Ky.—W. T. Shaw has sold out to Fred G. Jones & Co., of Louisville.

New Orleans, La.—The Edwards Lumber Co., of Mobile, Ala., has opened an office here.

Marysville, O.—The Marysville Wire Fence & Lumber Co. has sold its lumber business to C. H. Bodley.

Tulsa, Okla.—The E. C. Robinson Lumber Co. has sold out to the F. S. Miller Lumber Co.

Hillsboro, Tex.—Wilkerson & Satterfield have changed name to the O. L. Wilkerson Lumber Co.

Lexington, Ky.—J. T. Jackson is now the J. T. Jackson Lumber Co.

Piketon, O.—The Bowlus Timber Co. has sold out to J. W. Dewey.

Richland, Ore.—The Richland Lumber Co. has sold out to the McDowell Bros. Milling & Lumber Co.

Burke, S. D.—Kinnie & Schutz have sold out to the Jas. A. Smith Lumber Co., of Osage, Iowa.

Sheboygan, Wis.—The Northern Furniture Co. has increased its capital stock from $400,000 to $600,000.

New Diggins, Wis.—The Champion Lumber Co. has been succeeded by the New Diggins Lumber Co.

Greenleaf, Wis.—M. J. Roach has sold his lumber yard and building material business to H. W. Jeffris, of Oshkosh.

Fires

San Francisco, Cal.—The main factory of the Pacific Box Co., destroyed by fire with a loss of about $200,000, is rebuilding.

Ogdensburg, N. Y.—Planing plant of the Skillings, Whitneys & Barnes Lumber Co. burned; loss several thousand dollars.

Hartburg, Tex.—S. M. Tomme & Son's sawmill burned; loss $7,500.

Armorel, Ark.—The lumber yard of Lee Wilson & Co. burned; loss $150,000.

St. Paul, Minn.—Cedar and tamarack poles and railroad trackage of the Valentine-Clark Co. burned; estimated loss $500,000.

Paris, Tenn.—The Paris Lumber Co.'s plant partially destroyed by fire; loss $25,000, with $15,000 insurance.

Hoquiam, Wash.—Fire in the edger room of the Hoquiam Lumber & Shingle Co. caused $2,000 damage.

New Richmond, O.—Plant of the Friedman Lumber Co. burned; loss $6,500.

Evansville, Ind.—Fire in the lumber yards of F. M. Cutsinger destroyed poplar lumber valued at $1,500.

Chemainus, B. C.—Two dry kilns at the plant of the Victoria Lumber & Manufacturing Co. burned; loss $15,000.

The News Miscellany of the Lumber World

Southwestern News

Kansas City, Mo., Nov. 23.—On a recent trip across the state of Missouri the Kansas City correspondent was surprised at the large number of new roofs and buildings of all kinds going up. Every city of any size is adding to its business buildings, while an unusually large number of good residences are going up both in the country and smaller cities. These places reflect the prosperity of this territory. Building continues to make gains here and the real estate business is active.

KANSAS CITY, MO.

A Kansas City newspaper recently "wrote up" the recently organized Kansas City Lumber Trade Exchange in such a manner that an explanation of its purposes is necessary. The organization, still incomplete, is designed to encourage honest competition in the retail lumber business here. It would eliminate price cutting methods that reduce profits below the cost of doing business. The scheme is admittedly an experiment but an incorporation is planned, thus giving it state recognition. Until that is done all the details of the plan will not be decided upon.

Among the social events of the last week here was the Towers-Foresman wedding. John Alden Towers is a rising young lawyer here and Miss Hazel Mae Foresman is the daughter of J. H. Foresman, manager of the retail interests of the Long-Bell Lumber Co. Both are popular in the younger set here.

That lumbermen are finding the production of fine cattle profitable is evidenced by the purchase last week of a 1,800-acre tract near this city by W. R. and W. A. Pickering. The Pickerings plan to develop their new holdings along the lines of a stock farm.

* * *

Little Rock, Ark., Nov. 20.—It is proposed to hold a conference of Arkansas shippers in little Rock some time within the next two weeks, for the purpose of trying to find some remedy for the serious car shortage situation, which has prevailed here for some time. The shippers will also at that meeting discuss the proposed changes in the demurrage rates of the various railroads throughout the country. Doubtless, if it will tend to make conditions better in the matter of getting cars, as it is hoped or intended to do, the shippers here and elsewhere will be glad to have the changes made.

LITTLE ROCK, ARK.

The Southern Lumber Co. is increasing the capacity of its plant at Warren, from 90,000 feet to 230,000 feet per day. The Warren Stave Co. is also enlarging its plant, by adding a hardwood lumber mill. Both of these will be ready for operation by January 1 or before.

A 760-acre timber land tract was purchased by S. M. Samstag, of Hot Springs, recently. The tract lies near Moscow. The purchase price was $26,000. Mr. Samstag in turn sold the timber from the tract to W. S. Edler, of Sheridan, who will erect a mill on the land and cut the timber for market.

Inland Empire News

Spokane, Wash., Nov. 20.—Spokane's building permit records are continuing to beat all former figures, according to the totals for the first ten months of 1916, compiled today. The number issued, so far this year is within 180 of the total issued during the entire two years, 1914-1915, and this year's total already is more than 70 percent ahead of twelve months' total for 1915, and more than double the total during the first ten months of last year.

SPOKANE, WASH.

Considerable of interest has transpired in the lumber world of the Spokane country during the last week, including large sales, and the announcement of plans for the coming year. Market prices are holding firm, and sales are exceptionally good. Inquiries indicate that this condition will continue. An advance of $1 per thousand has been made by all grades of lumber on the coast, according to reports from the West Coast Lumbermen's Association, and this sent rumors afloat that there would be an advance in prices here. This, however, has not been substantiated by the lumbermen themselves, who state that they do not look for a rise in the Spokane prices. It is explained that for the last six months coast firms have been selling at a lower price than Spokane manufacturers.

The Dover Lumber Co., of Sandpoint, Idaho, fifty miles north of Spokane, has started on the survey for a flume, which when completed will be used to bring the timber to the Clarksfork river, and from there the logs will be boomed to the mill. This flume will probably be nearly ten miles in length. Supervisor J. A. Fitzwater, of the Pend d'Oreille national forest, in north Idaho, has just consummated the sale of 80,000,000 feet, board measure, of timber on the Lightning creek water shed in the Pend d'Oreille forest. The sale was made to the Dover Lumber Co., and the contract extends over a period of from eight to ten years.

Pacific Coast News

San Francisco, Cal., Nov. 20.—J. W. McLean, manager of the San Francisco branch of the Simonds Manufacturing Co., is making a visit to the home office at Fitchburg, Mass., and will attend the annual meeting of branch managers.

SAN FRANCISCO, CAL.

A Hoo-Hoo dinner, followed by a concatenation, will be held at the Commercial Club, San Francisco, on December 9.

The Art Toy Co. has established a plant at 269 Eighth street, San Francisco, where building block toys are being manufactured of redwood. Manager W. F. Haskins states that about 125,000 feet of redwood will be used to supply the demand of the coming holiday season.

The Hihn-Hammond planing mill at Santa Cruz has been transformed into a plant for demonstrating the possibilities of utilizing redwood waste for the manufacture of paper. George M. Pillsbury will have charge of the plant.

The McCloud River Lumber Co. has closed its two mills and the logging camps at McCloud, Cal. The early closing was necessitated by the shortage of cars to ship the finished product.

A heavy snowfall in the mountains around Truckee, Cal., has caused the lumber mills in that vicinity to close earlier than usual.

The California Door Co. plans to continue operations at Caldor and Diamond Springs as long as possible, as a splendid market is being found for its finished products.

* * *

Tacoma, Wash., Nov. 20.—Tacoma bank clearings and building permits showed a large increase during October over the figures for the same month last year. Bank clearings for the month amounted to $11,055,920, as compared with $8,545,956 a year ago. This is a gain of 23 percent. Building permits in October, 1916, amounted to $96,427, as against $70,205 last year, an increase of 37 percent.

TACOMA, WASH.

The St. Paul & Tacoma Lumber Co. has completed the construction of a new fuel shed, of unique design and said to be the largest of its kind on the Pacific coast. The building has a sloping roof, 40 feet high at the ridgepole. At frequent intervals trapdoors are cut in the roof through which the conveyors carry the cut wood. The St. Paul company expects to be able to sell dry wood during the entire rainy season.

Geoffrey Winslow, former manager of the St. Paul & Tacoma Lumber Co.'s creosoting department, visited Tacoma last week and reported that his new plant at Everett is nearly completed and that he expects to begin operations this month.

An inquiry for approximately 6,000,000 feet of lumber for use by the government at Fort Sam Houston, Texas, was received by Tacoma lumbermen early in November. The specifications were received by wire and were extremely vague. Lumbermen are unable to account for the government's action in asking the northwest manufacturers to furnish lumber for a point so far away, although the freight differential would not apply, as the material was to be shipped on a government bill of lading.

* * *

Centralia, Wash., Nov. 20.—The M. C. & M. Lumber Co. is the name of a new agency that recently opened up in Centralia for business. E. W. Miller and Louis Charneski are the members of the new firm. Both were formerly connected with the McCormick Lumber Co. The new concern is maintaining offices in the Union Loan & Trust Co. building.

CENTRALIA, WASH.

Messrs. Carpenter of the American Cross Arm Co. of Chicago, Hosford of the American Telephone and Telegraph Co. of New York, Wisner of the Pacific Telephone and Telegraph Co. of San Francisco, and Boren of the Western Electric Co. of New York who have been in Centralia for several days conferring with local mill men relative to improving cross arms used by the various telephone companies, have finished their work here and left for their various homes.

Schafer Bros. are opening up a logging camp near Junction City where they have a section of timber to cut. Schafer Bros. will also resume work on their railroad which was abandoned soon after the strike of the longshoremen.

Northern States News

Rib Lake, Wis., Nov. 20.—The largest saw mill chimney in the state of Wisconsin was completed here November 6. This chimney, which is of brick construction, was built by the Alphons Custodis Chimney Construction Co., of New York, for the new modern sawmill of the Rib Lake Lumber Co., which will be ready to start operations in about another month.

RIB LAKE, WIS.

The chimney is 165 feet high, 14 feet 10¼ inches in diameter at the bottom, and 7 feet 9 inches at the top. It rests on a solid concrete foundation, reinforced with steel, 20 feet square, 9 feet thick and has a dead weight on same of 364 tons. The chimney in question is guaranteed to withstand the dead and wind loads of the column when exposed to a wind velocity of 100 miles an hour.

Middle States News

Buffalo, N. Y., Nov. 23.—The Buffalo Lumber Exchange held a meeting a few days ago to receive the report of the delegates who attended the hearing on the lumber-in-transit privilege before the Interstate Commerce Commission at Washington. Some differences have arisen between the northern and southern railroads as to the division of the rates on transit lumber and it is probable that another hearing will be given by the commission.

BUFFALO, N. Y.

This city will be the center of a Billy Sunday campaign beginning next February and the erection of a tabernacle is to be undertaken immediately. It will have to be rushed to completion in order to have it ready in time. The site has to be somewhere within a two-mile radius of the center of the city. The tabernacle is to be of wood and 249 by 302 feet in size and is to seat

Digitized by Google

What Is a Lacey Report?

It is science applied to the measurement of timber values to produce a statistical photograph, so to speak, of a tract of timber. When desirable, it includes a detailed contour map accurate enough to plan logging operations upon, and always includes a mass of intelligent commentary on all conditions of interest to an investing or logging purchaser.

The LACEY REPORT, which is the recognized gospel of timber values, is but an index to the great facilities and resources of this organization in whatever pertains to transactions in standing timber—the king of investments today.

Send for our interesting booklet.

NEW ORLEANS 1213 Whitney-Central Bldg.

16,000 people. With the present shortage of cars it may prove a difficult matter to get the required quantity of lumber. North Carolina pine was specified at first, but some change may be made in the requirement.

The Beaver Board Timber Co. has been incorporated to take over the Smith-Fassett Lumber Co., at Charlton, on the Blanche River, in upper Ontario. The buyer has a large plant at Thorold and thus acquires a good supply of spruce to be manufactured there. President W. F. MacGlashan, of the Beaver Board Co., becomes president of the new timber company and all the other officers but one are Buffalonians.

An unfamiliar sight in this harbor nowadays is a sailing vessel loaded with lumber, but one arrived the other day, the Sophie, bringing 292,862 feet of white pine for Graves, Manbert, George & Co. She sailed from Georgian Bay in two weeks.

Gulf Coast News

NEW ORLEANS, LA.

New Orleans, La., Nov. 23.—Plans for the organization of a large corporation, to handle the products of manufacturers in St. Louis and other commercial centers of the Mississippi valley, for exportation to Central and South America and the Pacific coast, through the port of New Orleans, are actively under way, and the completion of the organization may be expected in a short time.

Charles F. Herb, vice-president of the Mississippi Valley Trust Co., of St. Louis, who as a member of the St. Louis delegation, took part in the business conference here recently between the commercial organizations of Chicago, St. Louis and New Orleans, is responsible for the above statement.

The schooner June, recently purchased by New Orleans interests, has arrived from the Pacific coast, and is being loaded at Gulfport, Miss., with 400,000 feet of yellow pine, furnished by the Finkbine Lumber Co., the Quaves Lumber Co. and the Vinegar Bend Lumber Co., for shipment to the West Indies. The June will hereafter ply regularly in the West Indian and Cuban trade.

The W. F. Johnson Lumber Co., of Campti, La., has recently bought a large body of fine timber at Natchitoches, La., and has started the construction of a new mill. It is using some of the equipment from the Campti mill, but is increasing mill capacity, and will have a more modern plant at the new location. It is building two kilns of the Moore moist air type, with capacity of 20,000 feet per day.

At the annual meeting of stockholders of the Great Southern Lumber Co., held last week at Bogalusa, La., all old officers were re-elected, and reports submitted showed that the past year had been one of the most prosperous in the history of the corporation.

As an evidence of willingness to assist the railroads in relieving the car shortage, southern pine manufacturers have agreed that demurrage charges on cars be increased, and that reconsignment privileges be suspended until the situation is improved.

* * *

ORANGE, TEX.

Orange, Tex., Nov. 21.—The schooner City of Orange, of 1,800 tons, which is said to be the largest yellow pine vessel ever built on the Gulf of Mexico or its tributaries, was launched here today. The schooner is to be used in the export lumber trade between Orange and Italian ports and is owned by Henry Piaggio, Italian consul at Gulfport, Miss., who for a number of years has been extensively engaged in the exportation of coal and pine pitch.

More than half a hundred ladies and gentlemen, friends of Mr. Piaggio, from half a dozen cities and towns in Mississippi, Louisiana, Alabama, Texas and Florida, made up a party to the launching. Special Pullmans attached to a Southern Pacific train brought the crowd to Orange, where the Board of Trade and business men generally had subscribed $2,000 for their entertainment. Last Wednesday night there was a ball, which was preceded by a banquet.

* * *

BEAUMONT, TEX.

Beaumont, Tex., Nov. 22.—No port on the gulf coast can boast of a record equal to that of Port Beaumont in its first eight months existence. Since the deep water channel was officially opened, March 23, by the arrival of the American steamship Vesta, there have been several vessels in the harbor every week.

Total shipments handled up to August 31 was 250,000 tons. In September 328,000 barrels of petroleum products, 6,400,000 feet of lumber and timber and 700 carloads of merchandise were loaded at this port. In October the shipments included 3,000,000 feet of lumber, and all of the lumber and timber was shipped to England by the Standard Export Lumber Co.

The scarcity of ships, it is said, has held Beaumont's shipping back considerably, just as it has many other American ports.

Work on the second unit of municipal wharves is practically completed, and construction of the freight shed and terminal tracks at the water front will begin next week. Work on the shed was delayed and the contract has been relet to another contractor, who, it is believed, will push the shed to completion.

When this unit is finished the city will have 1,000 feet of modern wharfage and a 400-foot freight shed equipped with the most modern loading and unloading machinery.

* * *

HATTIESBURG, MISS.

Hattiesburg, Miss., Nov. 20.—The people of Louise, a small town on the Y. & M. V. railroad near Yazoo City, have rented a tract of land for a term of years and have offered the site to the Bellgrade Lumber Co., which is contemplating building in that section.

It is announced that the Churchill-Milton Lumber Co. has accepted the proposition of the business men of Greenwood and will build a mill there at an early date.

According to statements made in shipping circles at Gulfport there was more tonnage in the Gulfport basin last week than there has been at any other time for the past three years. There have been more ships, it is said, but the eleven which were there last week were larger and will carry more extensive cargoes. Two of the vessels carry upward of two million feet of lumber.

The Central Lumber Co., which operates mills at Brookhaven, Bogue Chitto and McCalls Creek, has recently completed a fifty thousand capacity circular mill at Lucien. It has sufficient pine timber to keep the mill in operation for years and will have it running full time within the next few days.

Sam Eaton, who has been connected with the J J. Newman Lumber Co. of this city for several years as order clerk, and for the past two years as assistant sales manager, has severed his connection with the Newman lumber company and accepted a place as sales manager with the W. W. Carre Lumber Co. of New Orleans. Eugene Bridges, who has been order clerk with the Newman lumber company, has been promoted to the position of assistant sales manager.

* * *

GULFPORT, MISS.

Gulfport, Miss., Nov. 21.—Representative business men from all parts of the gulf coast country, in which the lumber industry was prominently represented, attended a meeting held here at the Great Southern Hotel today, at which formal organization of the Gulf Coast Country Tourist and Development League of Mississippi, Alabama and Florida was effected.

Henry Hall, president of the First National Bank of Mobile, was elected president of the league, other officers chosen being: R. W. Goodheart, president of the National Bank of Commerce, Pensacola, first vice-president; Thomas O'Donnell of Hattiesburg, second vice-president; A. F. Dantzler of Moss Point, third vice-president, and Dr. H. W. Taylor of Mobile, secretary.

An executive committee of twelve members will be appointed, while the board of directors will be composed of one member from each community represented in the league. Mobile was designated as official headquarters of the organization.

The object of the league is to nationalize the gulf coast country through means of a great publicity campaign, at an approximate cost of $250,000, on a basis of $50,000 annually for five years.

Central Southern News

MEMPHIS, TENN.

Memphis, Tenn., Nov. 21, 1916.—The Tensas Land & Lumber Co. has been incorporated here with a capital stock of $25,000. It was announced a short time ago that O. T. Woodward had purchased 5,018 acres of timber lands in East Carroll Parish, La., from the Idaville Land Co., and the incorporation of the new firm followed immediately thereafter. Steps will be taken to develop the timber on the property thus acquired.

The Bellgrade Lumber Co. has announced that

Digitized by Google

the mill which it recently acquired at Zwolle, La., will be removed to Louise, Miss., and that it will be in readiness for operation sometime next spring. This firm sometime ago purchased 7,500 acres of timber lands in Sharkey and adjoining counties in Mississippi and the mill will be installed for the development thereof. It will have a capacity of 40,000 to 50,000 feet per day. The Bellgrade Lumber Co., owns and operates a big hardwood mill at Isola, Miss.

At the recent meeting of the stockholders of the Mossman Lumber Co. the following officers were elected: W. E. Mossman, Fort Wayne, Ind., president; W. C. Douglass, Memphis, vice-president; F. C. Storton, Memphis, secretary; F. G. Smith, Memphis, treasurer and manager, and A. C. Wilkinson, Huntingdon, Ind., and J. J. Rankin, Henderson, Ky., directors. This company has recently acquired two sections of timber lands in Mississippi county, Arkansas, and will either establish a mill for the development thereof or will handle the timber thereon in some other manner.

Announcement is made that the McLean-Arkansas Lumber Co. will complete its big hardwood mill at Argenta, a suburb of Little Rock, by Dec. 1, and that it will be placed in operation on that date. The company has an ample supply of timber to last for a number of years. The mill will have a daily capacity of about 40,000 feet and is estimated to have cost at least $100,000.

* * *

BIRMINGHAM, ALA.

Birmingham, Ala., Nov. 20.—Hereafter the city of Birmingham will be able to make repairs on buildings declared unsafe, insanitary or fire traps, after due notice has been given the owner and the charges will be assessed against the owner. An ordinance to this effect was adopted.

The Vredenburgh Saw Mill Co., Vredenburgh, is building three dry kilns 20 by 100 feet of the Moore Moist Air type, order having been placed with L. Moore Dry Kiln Co., Jacksonville, Fla.

The car shortage, the result of which is being felt throughout this section, is especially noticeable in the retail lumber business. Already prices have been advanced on the local yards because of the shortage in rolling stock, and, unless the present condition is removed, a lumber famine is not a remote eventuality.

Building operations in Birmingham continue to show increases, with the total for October reaching $148,733, compared to $136,747 for the same month last year, a gain of more than 8 percent. Total number of permits issued was 608, compared with 579 last year. Frame residences predominated, with $62,297 for new structures, and repairs to frame residences amounted to $49,430.

Ohio Valley News

CINCINNATI, OHIO.

Cincinnati, O., Nov. 23.—Cincinnati lumbermen who deal in California and Pacific coast fir are much concerned over the recent announcement that the car shortage on the western coast has reached a point where it is restricting production of all forest products. At 124 mills, it is announced that the balance of unshipped orders for transcontinental rail delivery has reached 10,428 car loads, and this does not take in unshipped orders for shingles, sash, doors and other factory products. Shingles are especially scarce now in this locality.

After long years of waiting, being alternately bouyed up by false rumors and depressed by official denials, Cincinnati lumbermen recently were formally notified that for the purpose of opening up vast undeveloped timberlands in Nicholas and Greenbrier counties, West Virginia, the New York Central railroad has authorized the construction of 20 miles of railroad along the Gauley river. The work of building this long looked for spur will be started in the very near future, it is said. It will prove a tremendous boon to this market, affording a direct line of shipment from the producing point to the big markets.

A suit of more than usual interest to Cincinnati, Kentucky and West Virginia lumber operators was instituted last week in federal court at Covington, Ky., across the river from Cincinnati, by John R. Boreing and others, of Laurel County, Ky., against W. T. and E. G. Garrard, the Kentucky River Timber & Coal Co., and the Mowbray & Robinson Co., in which it is sought to quiet title to 90,000 acres of timber land in Lincoln county, Ky., situated along the Kentucky river. The plaintiffs declare there is timber growth on the land valued at $70,000 and that the defendants have removed timber from this land to the value of $18,000 and that the plaintiffs have suffered damages amounting to $10,000.

The Clinton County Lumber Co., at Wilmington, Ohio, recently was incorporated for $25,000, the directorate of the new concern being composed of H. R. Allen, R. W. Allen, Edward Johnson, R. A. Lewis and Phillip C. Read.

The Stevens Organ and Piano Co., at Marietta, Ohio, large consumer of fancy hardwoods, recently increased capital stock from $50,000 to $75,000.

* * *

LOUISVILLE, KY.

Louisville, Ky., Nov. 22.—In addition to installing considerable new machinery, the Louisville Veneer Mills plant is being enlarged considerably. Three new kilns are being erected, and an additional warehouse constructed. When improvements are completed the plant will be one of the most perfectly equipped in the south.

Yard stocks are rather light in Louisville at present, due to the strong demand and light receipts. Building operations during the past two months have shown up well, and have opened up a market for millwork and interior trim.

Dallas Brightwell has resigned as secretary-treasurer of the Capital Lumber & Manufacturing Co., to go with the Lyons Lumber Co., forming a partnership with G. R. Lyons and H. R. Lewis, the present owners.

Timber interests of Kentucky are awaiting with much interest the action of the governor relative to calling a special session of the state legislature in January to take up the matter of tax reform in the state. During the 1916 meeting of the general assembly, at the instance of the assembly, the governor appointed a tax commission, to investigate conditions in the state. It is understood that the findings of the commission will cause a general revisement of the present laws, which it is said are unreasonable.

* * *

EVANSVILLE, IND.

Evansville, Ind., Nov. 23.—The Fullerton-Powell Hadwood Lumber Co., which had offices and yards at 2224 East Virginia street, this city, has closed out its business and the former local manager, W. P. Schmuhl, has returned to his home at Michigan City, Ind., and probably will engage in the lumber business there. The office building and yards here, along with what lumber was left on hand, have been taken over by Maley & Wertz, hardwood lumber manufacturers of this city.

A report from Mt. Vernon, Ind., states that the plant of the Moeller Cooperage Co. at that place is now being operated on the day and night schedule in order to fill large orders from three large flour mills for barrels. Most of the cooperage plants in this part of the state are running on good time now.

Veneer factories in Evansville continue to run on full time and the indications are that the manufacturers will keep busy all winter. This has been a mighty good year for the veneer manufacturers of this section.

Fred Bergman, of Bergman & Mann, planing mill owners and lumber dealers at Chrisney, Ind., who was a recent visitor in Evansville, reported trade conditions in his section coming along all right.

Fire a few days ago destroyed about $1,500 worth of poplar lumber in the yards of Frank M. Cutsinger, lumber manufacturer here, the loss being covered by insurance.

CANADIAN TRADE INDEX.

Our thanks are due the Canadian Manufacturers Association, of Toronto, Ont., for a copy of the 1916-18 bi-annual edition of the Canadian Trade Index, a work similar to the Hendricks Commercial Register and Sweet's Architectural Catalogue, so well known in the United States. The Canadian Trade Index is a pretentious work and gives information of value to not only the manufacturers of the Dominion, but to outside industrial interests over the world, who have had, are having, or contemplate any measure of trade relations with the manufacturers of Canada.

Considering the great stress under which Canadian industries must be laboring in this direful period, the work is a revelation and is illustrative of the stolid, determined character of the Canadians in their vital crisis. The work comprises 560 pages and the various industries are arranged in such a way that almost any information as to kind of business or location can be found without the slightest difficulty. The price of the work is $5 and it can be secured by addressing the Canadian Manufacturers Association, 1404 Traders Bank building, Toronto, Canada.

The Current Trend of the Lumber Market

General Market Review

The unprecedented car shortage—reported on November 1 at 108,000 cars—marks the most critical business emergency of its kind in the commercial history of the country. It means that, aside from bad order cars, there are at least 5,000,000 tons of commodities awaiting immediate shipment, to say nothing of millions of tons of commodities that would be shipped were cars available, but for which no car requirement has been made, shippers knowing it to be utterly useless to make such requirement. In lumber, particularly, the requirement for cars is estimated to be practically double the supply and, according to the last report, in yellow pine alone there are 617,000,000 feet of unshipped orders at 153 mills, and the total amount from the several thousand mills manufacturing yellow pine amounts perhaps to a billion and a half feet. At 111 mills on the Pacific coast there are 125,000,000 feet of lumber awaiting shipment in the Pacific northwest and if the statistics could be obtained from other mills, not members of the manufacturers' associations, it is likely that the total would be several times as large.

NORTHERN AND WESTERN PINE.

A tendency to limit purchases on the part of buyers of northern white pine because of the approach of the inventory season has narrowed down the market considerably in eastern territory within the last two weeks. At the same time stocks of northern pine are much broken and most of the mills, save those equipped for winter operations, have shut down. The retail trade is practically out of the market and there will be little doing in this line again until along toward February. At the same time there has been more inquiry for northern pine than operators had anticipated and the price has been well maintained. Chicago yard stocks are not heavy and representatives here of northern mills are hard pressed to make deliveries and are getting many fresh inquiries from large consuming industries. The demand for Idaho and Western pine at the Inland Empire mills is still heavy and prices are reported to be held at previous figures. A good demand also exists for California white and sugar pine, in both the upper grades and for box material. The car shortage is a dominating factor, however, and deliveries on many orders are delayed indefinitely.

NORTHERN AND SOUTHERN HARDWOODS.

Northern hardwood markets have been somewhat more closely scanned by buyers for several weeks and slightly better prices have been reported in some of the staple woods. It is noted that dry stocks are much depleted and especially in thicknesses above one inch. Low grades are receiving some attention, owing to the scarcity of the uppers, with the result that, taking the northern list all through, there is an average advance ranging from $1 to $2 on most items of firsts and seconds.

Maple is one of the strong northern stocks and thick lumber has lately been in exceptionally good request. Birch is having a steady outgo at previous satisfactory figures. Soft elm has advanced steadily, it being reported that thick elm is selling as much as $3 better than it did sixty days ago. Basswood is in excellent request and the stocks of this item are meager in all grades. There are indications that the demand for thick stocks of northern woods will continue of healthy proportions, as it is evident that wholesale stocks are not in complete assortment.

This week air dried southern oak has been sold in car lots in Chicago at from $52 to $54 for firsts and seconds, and $33 for No. 1 common. At the same time Kraetzer-cured plain oak, firsts and seconds, has brought as high as $56, while No. 1 common has sold at $35. Sap gum has fallen off in the demand from the volume visible in the summer months and also in price and is now purchasable at $26.50 to $27 for firsts and seconds, and from $22 to $22.50 for No. 1 common. Red gum has been selling around $38 and $24 for the two grades respectively. White ash is in excellent request, as is also hickory, considerable of this stock being absorbed in the aeroplane industry. The cottonwood demand is normal and rather steady as to price. Box manufacturers are taking all of the low grade cottonwood available.

There is a fair demand for poplar, not only in Chicago, but throughout the northern territory and stocks of dry lumber in the upper grades are reported broken.

SOUTHERN PINE.

The unprecedented car shortage, which bids fair to become an historical event, being already greater than any previous one of record, is largely responsible for a recent advance shown on many items of southern pine. At the same time the mills have been compelled to restrict their production in many cases because of lack of piling room and inability to get cars, and this has helped in the improved prices. The mills generally are able to secure an average of not to exceed 60 percent of their equipment requirement and in some sections shippers are compelled to resort to almost every subterfuge short of highway robbery to secure enough cars to take care of their most urgent needs, leaving ordinary deliveries out of the question entirely. The small percentage of equipment they are getting consists of flats and gondolas, with practically no box cars available.

Advances ranging from $6 to $7 a thousand, as compared with last spring's quotations, are reported on long leaf and from $3 to $5 on short leaf. Discounts from the September list now range from $4.50 to $5.75 on various items of long leaf and $5.50 to $6.50 on short leaf. Small dimension is being ordered from points east of the river that is sold perhaps a half dollar cheaper than the above, these comprising straight cars of one size of lumber in all lengths, but running about 50 percent to 16 foot as a rule. Two by four 16's are quoted at about $23 delivered in Chicago territory; 2 x 4, 10 to 20 foot, are about $5 off, being now quoted at $24.75 delivered here; 2 x 6's, 10 to 20 foot, are averaging about $16 at the mill, or $23 here.

There is a big demand for all classes of car material and some of the prices that are quoted are $27.50 for car decking, $31 for car siding, $24 for No. 1 common roofing and from $31 to $32 for sills, this latter item having shown an advance of something like $7 in the last two or three months. Shiplap is now quoted at $21.50, Chicago, which is $4 above the price ruling last summer. In 8, 10 and 12 inch No. 2 center-matched, there has been an advance this week of $1, which makes a net advance of $5 over last summer, the price quoted being now $20 delivered.

One of the unique features of the situation is that transit cars, about which there has been so much discussion at the association meetings, are bringing a higher price at Chicago today than regular shipments. This is one of the developments of the car shortage, it being quite evident that an order given for regular delivery might not be shipped for several weeks, while a car that is known to be in transit, even if the items contained in it are not exactly what the buyer wants, are assured of early delivery, a fact that means much to the small dealer who does not wish to carry large stocks on hand.

The latest trade barometer issued by the Southern Pine Association shows a greatly increased total of orders unshipped, amounting in round numbers to 617,000,000 feet.

CYPRESS.

The widespread difficulty of obtaining cars is one of the primal causes of a higher price for cypress. During the week C finish, 1 x 4 to 1 x 10 widths, has been advanced by $2.50 and many other items have been listed 50 cents or $1 higher. There is a good call for everything on the list; and were shipping facilities good, the cypress industry would be in a most prosperous condition—for a time at least. Some of the mills are so well loaded up on orders that they are unable to accept any more for the present and at some plants also there is a visible lack of assortment, with scarcely any surplus reported in any item. The market is oversold on thick cypress, for which the demand from factory sources lately has been unusually good. The call for mixed cars is not especially active just now, as trade in the retail territory west and southwest is tapering down. Cypress shingles and lath are both in greater demand than supply and No. 2 lath are practically out of the market.

HEMLOCK.

The effects of the scarcity of cars are not so observable in the north as in the south and middle territory, hence the manufacturers of hemlock are able to give good service on deliveries, this being an advantage of no small magnitude over their yellow pine competitors. At this time of the year, however, the demand is necessarily contracting, especially in the direction of the retail trade, which is now buying in only a perfunctory manner such items as are most urgently needed for replenishment. General buying in the east is still fairly good, owing to the excellent weather that has prevailed. The demand is mostly, however, for No. 3 for boxing and crating purposes. Stocks in the hands of the manufacturers are considerably broken, more so than usual at the end of the season and a mixed car order is filled with increasing difficulty. Many of the mills are shutting down for the winter or getting ready to close down and begin their logging operations. It appears to be the general opinion that the log input this winter will be larger than a year ago, but will still be below the normal if plans now entertained are carried out. Prices are holding fairly well, most of the sales reported being on the basis of $1.50 off the list and on one or two items the concession is less.

SHINGLES AND LATH.

It has required a very nimble operator to keep in touch with the red cedar shingle market during the last few weeks. The scarcity of cars has reduced transit forwarding and as a necessary result whenever any cars have been available buyers have been disposed to bid for them rather than await offers. A plentiful supply of transits has meant a normal market, but whenever there has been a scarcity the tendency has been toward higher prices by from 5 cents to 10 cents almost any day. In the general demand for clears it seems that stars have been lost sight of, there being little, if any, change in the quotation of this grade throughout the recent flurry. Sales of red cedars in Chicago territory were reported on Friday of this week at $3.46 for clears and $2.87 for stars. White cedar prices are following those of the coast variety, in a more modest way, however, but have advanced materially, recent sales having been made at $3.35 for extras and $2.50 to $2.55 for standards.

HARDWOOD FLOORING.

The situation in hardwood flooring is greatly improved from what it was six months ago. Maple flooring is reported to be largely oversold and some of the factories are laying off on their solicitation of new business for the present. There is a slight advance in prices, quotations lately having been made on a basis of $47.50 for clears; $41 for common and $27 for factory, this being for car load lots and based on a uniform delivered freight rate. Lately also there has been reported a renewal of foreign demand, which may mean an early resumption of shipments across the water. The present movement, however, is greatly restricted. Oak flooring is fairly active. A largely attended meeting of representatives of this industry was held in Chicago this week Tuesday and Wednesday, at which matters of vital moment to the industry were taken under consideration.

South Atlantic Markets

NORFOLK, VA.

A letter from a manufactufer of North Carolina pine was as follows: "Trade here has been better during the past two weeks, notwithstanding the excitement over the election, and manufacturers generally express themselves as hopeful of better business.

"Demand for the better grades is more active than for some time, but the most active demand is for boxboards.

"Car shortage at the mills is a source of serious complaint and embarrassment, and some mills will

Digitized by Google

have to close down until the situation is somewhat relieved."

JACKSONVILLE, FLA.

A letter received from a Florida lumberman says: "Lumbermen seem to confidently expect a good trade for the balance of the year, in spite of the shortage of ships and cars. The car situation is still very bad, and reports of a slight improvement noted in other quarters are not shared generally by lumbermen, who claim the scarcity of rolling stock is equally as serious as it has been at any time.

"The labor situation is a little better. Mills which have for some weeks experienced difficulty in obtaining a sufficiency of labor, owing to the exodus of negroes to the north and plantation demands, are now securing adequate forces to take care of their present needs, and it is believed that there will be a general loosening of the labor situation until next spring."

* * *

FRANKLIN, VA.

A well known manufacturer of North Carolina pine writes us as follows: "We are feeling very optimistic indeed over the present situation. We have, of course, felt to a certain extent the effects of the car shortage and we could increase our shipments by practically 50 percent if we could get all of the cars that we need, nor does there seem to be any indication of a letting up in the seriousness of this shortage.

"In view of the continued stiffening of the market, however, and the promised gradual increase in prices, we are trying to overlook this feature and we are confining our thoughts strictly to better business."

Northern States Markets

ST. PAUL, MINN.

A letter from one of the best informed men in the north on the general situation informs us as follows: "As to the lumber market, both present and future, from all indications of general building operations throughout the country, and considering the fact that lumber substitutes have advanced anywhere from 50 to 100 percent and even more; the further fact that the present car shortage is interfering with the movement of lumber as well as substitute material; the further fact that labor and supplies have been advanced or will be, we cannot help but feel but what lumber must advance materially over present ruling prices."

* * *

DUNBAR, WIS.

A manufacturer of northern woods writes us concerning the lumber situation as follows: "While we find that the market has stiffened somewhat and that more orders are coming in, we are, with the rest of the lumber trade, badly handicapped for the want of cars and at the present time have about all the orders on our books that we can take care of.

"We are in hopes that the market will advance and that with the election settled business will steady down and show a decided improvement."

* * *

NEOPIT, WIS.

We have received this letter describing shipping conditions at Neopit: "We are pleased to inform you that we find the lumber market very strong, the demand is big, and prices have an upward tendency. We have more orders on our books for immediate shipment than we have had during this year, and with the demand we are experiencing feel that prospects for the immediate future are very bright.

"The car shortage is bothering us considerably, but the demand is such that our customers are willing to permit of loading on almost any sort of loading equipment, in order to get their material."

Gulf Coast Markets

NEW ORLEANS, LA.

Conditions in the New Orleans market are described as follows: "A more cheerful feeling regarding the car situation is reflected in the better tone of the yellow pine market this week. Although scarcely any improvement is noted at present in the transportation situation, there appears to be a very general idea among manufacturers that a greater amount of rolling stock will be available for the movement of lumber during the next few days. In fact, many familiar with conditions declare emphatically that the worst is now over, and that a steady improvement may be expected. Dealers are more disposed to accept orders with guarantees of deliveries within thirty days than recently.

"Prices, which have remained good throughout all the trying times that have lately been experienced, show no decided trend backward or forward. The market is maintaining a firm tone, and all items are in demand at high figures, where prompt deliveries can be guaranteed.

"Cypress, which has been steadily on the up grade for some time, shows continued improvement for the past week or two, according to local manufacturers and sales agents. Twenty-five percent of the cypress output is decidedly stronger than ten days ago, and the rest of the list has remained virtually stationary. No item records a decline, and nearly all at least a slight advance. The present logging season has been very good, on account of the fact that the scarcity of rain has helped dry swamp operations.

"Splendid demand for tupelo and gum of all grades is the striking feature of the hardwood market. Tupelo, which has been advancing for some weeks, is now commanding prices higher than for many months, and from the substantial character of orders received for this material, dealers and manufacturers see no prospect for recessions at any time in the near future.

"Oak, which has been fairly active recently, continues to move in a more or less substantial way. Firm prices are asked for poplar, elm, hickory and other hardwoods.

"Continued dry weather has tended to stimulate mill operations. Labor and price conditions are said to be satisfactory, and the only thing standing in the way of a good market is an adequate supply of cars to handle the product of the mills."

* * *

ORANGE, TEX.

A prominent lumberman of Orange writes us as follows: "Lack of equipment to move lumber is seriously interfering with trade here. Orders are plentiful and prices are advancing. Yard stocks have undoubtedly been seriously depleted by the car shortage, for deliveries recently have been very irregular, and demand abnormally high, in view of the extensive building operations reported in all parts of the country. Many mills would be thirty to sixty days in catching up with orders, even were the car situation effectually relieved at once. Due to the flattering prices that have been offered, some mills have sold ahead for a month or two on a few items."

Central Southern Markets

CHARLESTON, MISS.

A lumberman in close touch with producing and shipping conditions in the south writes us as follows: "So far as we can see there seems to be nothing in sight to prevent a marked advance in values of hardwood. We base our opinion of this view on conditions prevailing in the hardwood district, which are in substance as follows: The shortage of freight cars preventing mills accumulating logs for winter supply; increased demand for lumber of all kinds from neutral nations; a tendency on the part of ocean rates to permit of more liberal exportations; improvement in general confidences; car shortage curtailing supply in the consuming markets with no prospects of immediate relief.

"These are some of the things that we believe will improve prices in the consuming markets."

Pacific Coast Markets

TACOMA, WASH.

Conditions in the Tacoma market are described as follows: "So serious is the car shortage in this locality that there are rumors that a number of the larger mills are planning to close down until the situation improves. While these reports could not be confirmed, it seems to be accepted that unless a remedy is found soon, the lumber trade will suffer materially. Orders are plentiful and prices better than for many months, but as manufacturers are unable to get their lumber out the improved situation is only aggravating.

"Many of the mills are still operating on full time and piling up large quantities of lumber which they are unable to ship. It is feared by many operators that this large amount of surplus lumber

will have a weakening effect on prices when cars are again available. Railroad men are unable to promise any immediate relief and say that it will be another month before there is any marked improvement in the situation.

"The same relative condition prevails in the shingle market where prices are firm and the demand brisk. A majority of the mills are unable to ship any quantity of shingles out of the district."

* * *

A well known manufacturer of the northwest writes from Seattle as follows: "Relative to conditions here in this territory, from every indication we look for higher prices on all items of coast stock, which has been brought about by the increased demand as well as the severe car shortage.

SEATTLE, WASH.

"Orders and inquiries are coming here from sections that have never before used much fir, and have probably been forced here from the shortage in the south as well as in other sections. Many of the mills are refusing to take on any more business as they have all the orders they can possibly ship out within the next three to four months if they do not get any more cars than they have been getting. Mills that could load eight to ten cars a day are not getting to exceed eight or ten cars a week. Some of them are figuring on closing down on account of their inability to move their stock.

* * *

A correspondent writes us of the San Francisco market as follows: "The California lumber market continues to show an improvement, as far as the demand is concerned, as conditions for fall construction work have been ideal, but no changes in prices have been noted of late. The car shortage is making its effects felt, but retail yards are fairly well stocked, and the concerns feeling this most keenly are those who ship a large part of their output to points outside the state. A number of mills making a specialty of this shipping business have been compelled to close, and are far behind with deliveries.

SAN FRANCISCO, CAL.

"Lumber exports are below the normal, because of the scarcity of tonnage and the extremely high tonnage rates now prevailing. Even were ships available it is not likely that a high water mark would be reached, owing to the enormous cost of transportation. Just at present there is a very heavy demand for lumber in the Hawaiian Islands, and millmen are making special efforts to satisfy this. Shipments are now going forward steadily from San Francisco on freight and passenger steamers, but more could be used if they could be had at once.

"The market for shingles is steadier than it has been for some time, owing to increased residence building in the San Francisco Bay region, and a reduction of stocks.

New England Markets

A lumber authority at Boston, Mass., says: "The lumber market seems to be firm, although consumption is not active at this season. Dimension spruce is particularly strong and some of the lumbermen are predicting a further appreciation. At latest accounts sales were effected on dimension around $28. Considerable interest is caused among lumbermen by the greatly increased cost of logging supplies, especially in the way of provisions for logging camps, and this is bound to enter into calculations of lumber prices the coming spring. The car shortage has seriously affected the hardwood market, and consequently any stock available is promptly disposed of. A scarcity of thick maple and red birch is reported. Considerable hemlock is going into distributing hands, owing to the scarcity of yellow pine and the difficulty of getting deliveries. Sales recently made are on the basis of about $22 to $23. There is also a shortage of soft pine because of the inability to get shipments forward from either the middle northwest or from the Inland Empire. All Pacific coast lumber is quiet, on account of the light offerings and car shortages. The yellow pine market has been affected most seriously by the embargo placed on shipments from the south by the New Haven road, and there is naturally considerable strength to prices. A rather slow movement is noted in both red and white cedar shingles, and the price is attractive for anything that is offered. Lath are strong and scarce, both 1½ and 1½-inch spruce being in the best of demand."

BOSTON, MASS.

Inland Empire Markets

A lumberman writing of conditions in the Inland Empire says: "The market here is seriously affected by the lack of cars, although the Inland Empire has suffered less from this cause than most sections.

SPOKANE, WASH.

"Millmen report the lumber market to be very firm, with a favorable outlook and tendencies toward higher prices. Crops are good throughout the districts served by the Inland Empire mills, and the yard trade is consequently good.

"Building in this city, and in the towns throughout this section continues active with good prospects."

* * *

A leading manufacturer of the northwest writes us as follows: "The present condition of the market is considerably above normal with us. We only have a small stock on hand so far, approximately 20,000,000 feet, but have been very well treated with empty cars, and conditions are as near 100 percent as we want them, but we could have used about 50 cars more last month, if we had received them. We feel, however, that we will make more money on our lumber which we did not ship last month on account of advance in prices we will be sure to obtain during this coming year.

BEND, ORE.

"Contracts have been freely entered into at the advanced prices on shop, and when the peak of the movement on wheat has been reached we feel sure that cars will be easier. The continual cry of car shortage has been quite detrimental to the lumber interests in the west, holding back orders from us which we could have furnished in due time, although, to be candid, we could not give the service we would like, as very often certain cars of certain railroads would be scarce. On the whole, we have not the complaint to make which seems so prevalent, but which, I think, is a little overdone.

"We are very much opposed at the present time to long term contracts, and, with the exception of shop, have very little sold ahead.

"The market for boxes seems to be reaching a point where those manufacturers will at last receive a fair price for their products and enable us to sell them lumber at a price approximating the price received in the general trade."

Middle States Markets

A well known lumberman writes from Pittsburgh as follows: "Orders from dealers and from wood consuming industries continue to come in, Local building continues active, and reports from all sections show a like situation.

PITTSBURGH, PA.

"This makes us feel that we may anticipate a very active demand for nearly all kinds of lumber, and we shall not be surprised to see sharp advances on practically every commodity. There is already apparent a shortage in nearly all kinds of low grade and box lumber, and the glass manufacturers are just beginning to use lumber in their new fires, hence, we look for heavy business, and prices that are materially better than what we are now getting."

* * *

We are in receipt of the following report of the Buffalo market: "The lumber market has been quite active lately in some branches and the increased trade is said to be due to the car shortage at mill points. Yards here which can supply stock in a hurry have been getting a great many orders of late and in some lines stocks are becoming much depleted. By spring a lot of lumber will be moved out of wholesale yards and certain stocks will hardly be obtainable hereabouts. Some dealers say they have had more orders for certain stocks during the past month than for a number of years at this season. With such an unusual demand developing it is only natural that prices are showing an advance.

BUFFALO, N. Y.

"White pine has been selling a good deal more readily during the past few weeks and nearly all grades are wanted. The yards which handle low-grade stock say that the market will be short of

Digitized by Google

lumber this winter and that prices will be considerably higher.

"Hemlock and yellow pine are also in good demand and prices are up about $1 from a month ago. This is due to a large extent to the shortage of cars and inability of the railroads to make prompt shipments.

"The hardwood demand has been fair lately, but not as good as some dealers expected. Much trouble is experienced in getting men to handle lumber at the yards and incoming shipments are much delayed by car shortages at the mills. Prices are holding about the same and an advance is looked for.

"Shingles are in light supply here, the lake season having been an unusually dull one in shingle receipts. Prices are strong."

Southwestern Markets

ST. LOUIS, MO.

A correspondent writes us from St. Louis as follows: "The news of the trade is still largely dominated by the car shortage. It is the principal topic of conversation in all lumber offices here. It is seemingly unchanged. The natural decrease in the demand from the time stock taking commences until the first of the year may prevent the car situation from being so noticeable but it will not be greatly improved most dealers here assert.

"Yellow pine is in good demand and prices are advancing. Lack of equipment at the mills is having a marked effect on the supply here and there is a pressing need for some items.

"Hardwood dealers report a good business in all lines, limited, of course, by the car shortage. Prices advancing in most lines. Gum continues to lead, ash and poplar also are active, oak is rather slow in both plain and quartered."

* * *

HOUSTON, TEX.

A lumberman writes us from Houston as follows: "Orders and inquiries continue to come in and all the mills are raising prices. The car situation is about as bad as it has been for the last several weeks, but there is a very general opinion that an improvement in the situation is not far off, and mills are preparing to take care of the more active movement, which is expected to set in by the end of the month. Confidence is expressed that measures taken by the Interstate Commerce Commission will insure relief from the present trouble, at least to a considerable degree, and manufacturers are hopeful of soon satisfying the heavy demand for lumber reported from all parts of the country."

* * *

KANSAS CITY, MO.

Conditions in the Kansas City district are reported as follows: "There has been a good movement of yellow pine in the last two weeks considering the car shortage. The demand continues excellent but there has been some difficulty in finding supplies at mills that can move them with certainty of dispatch. Some mills are entirely out of the market. Others are holding the price at such a figure that they are getting practically no business. Reports from line yard operators here and from the smaller yards all over this territory reflect a good volume of building.

* * *

SHREVEPORT, LA.

The effect of car shortage in the south is shown in this letter from a manufacturer in Louisiana: "We are really overloaded with orders, especially in view of the present car situation, and are not taking on any business except an occasional car, when possible to do so, to help out our regular customers.

"We have been offered some very attractive prices for nearly every item on the list, on condition we could make shipment within a reasonable time, and it looks as though the manufacturer could name his own price, if he could satisfy customers that he could make the required shipment.

* * *

MALVERN, ARK.

A wideawake lumberman of Arkansas writes of market conditions as follows: "As to the present condition of the lumber market there can be no two opinions. There is a splendid demand at very satisfactory prices, and while this doubtless is stimulated to a considerable extent by the car famine, the fact remains that the retail yards are having an enormous fall demand, and we believe that even if there were no car famine, there would be good business for all of the mills.

"As to the immediate future, we can see nothing that can prevent a continuation of good business, at least up to the first of the year, and even beyond, if the mills will adopt and strictly adhere to the policy of cutting absolutely no more than they can ship.

Ohio Valley Markets

CINCINNATI, OHIO.

A correspondent, well informed on trade conditions, sends this report: "One of the chief features of the lumber market at present is the general stiffening of the yellow pine market, better prices being realized not only in cases where immediate shipment can be guaranteed, but on orders taken for future delivery. While the scarcity of cars is having a tendency to hold back the market naturally, nevertheless there has been a steady gain noticeable despite the car situation.

"Building operations are going along at a much better pace than was to be expected at this time of the year, due undoubtedly to the unseasonably mild weather and this has had the effect of bolstering up the demand for yellow pine in no small degree. Mill stocks are becoming pretty badly assorted due to the car scarcity, numerous mills shutting down or decreasing their output owing to the uncertainty regarding moving the product. Car building material probably is moving the best.

"Veneer stock is finding a very ready market in the hardwood list and probably features the hardwood market, although the lumber itself is moving in better volume than a few weeks back. Owing to the increased call for furniture lumber and box material there has been an upward tendency noted in prices for these items lately. Birch continues to rule in the northern list, finding a ready market with the furniture manufacturers and the lower grades are being readily snapped up by the box concerns. Oak has revived among the southern woods, red and white selling in better volume, with the inquiry gaining much larger proportions.

* * *

LOUISVILLE, KY.

We are in receipt of the report of this Louisville market: "With the exception of the shortage of cars in which to receive or ship stock the Louisville lumber market is in very good shape at the present time. There is a good demand for all grades of lumber and millwork, building operations being heavy for fall, and factories consuming lumber all being busy.

"Poplar and oak have recovered from the early fall slump, there now being a good demand for poplar box boards, thick stock and siding. Oak is moving well in plain and quartered in both red and white. Gum continues to feature the market, and all grades and thicknesses are in demand.

"Prices are generally satisfactory, the market firm, and higher prices are predicted."

* * *

EVANSVILLE, IND.

A man well informed on the hardwood lumber situation at Evansville and in southern Indiana writes as follows: "There has been a steady trade with the hardwood lumber manufacturers in this section during the past two weeks. From present indications business will remain good the balance of the year. Prices are holding up well. Collections are reported good.

"There is a strong demand for quartered white oak, as well as for the best grades of hardwood. Gum remains strong, due to the activity of local furniture factories that are being operated on full time. River mills report they are still receiving a good many inquiries for quartered sycamore.

"Logs are coming in nicely, although the prices are high, and some of the manufacturers report that they now have enough logs on hand to run their mills during the winter months.

"The retail lumber business is very good. Yellow pine dealers report a strong demand with steadily advancing prices. Building operations here remain active and weather conditions up to a few days ago have been ideal. Planing mills continue to run on full time and sash and door men report a steady active trade. Contractors and architects say there is a good deal of building in sight for next year. The various wood consuming plants in Evansville and surrounding cities are being operated on steady time and reports from the south and southwest are encouraging to the manufacturers. Furniture manufacturers are especially busy and there is every indication that next year will bring them in a larger volume of trade than this year."

A REMARKABLE SAW TOOL.

The Simonds Manufacturing Co., of Fitchburg, Mass., and Chicago, has recently perfected a remarkable saw tool for the purpose of fitting cross cut saws. The company recommends that in fitting saw teeth for cutting hardwoods, such as maple, birch, beech and oak, the raker teeth should be about 1/64 of an inch shorter than the cutting teeth, fit one-quarter of the thickness of the blade. It also recommends that for cutting soft woods, such as hemlock, pine and spruce, the raker teeth should be 1/40 of an inch shorter than the cutting teeth, fit one-third thickness of the blade. In order to produce these results the company has perfected the saw tool referred to. It has nine parts completely standardized, so that each part can be replaced by sending its number. The tool has three uses: (1) To gauge the cutting teeth; (2) to joint the raker teeth, and (3) to gauge exactly both cutting and raker teeth. Each of the screws used in this tool are thumb screws; no screw driver is necessary. The screw controlling the file is strong enough to give the curve desired.

The Simonds files used with this tool are admirably fitted to their work. An illustration of this excellent saw tool is given herewith.

ANOTHER SHIPYARD FOR TACOMA.

Tacoma, Wash., Nov. 20.—Plans for the construction of another shipyard in Tacoma harbor were announced November 1 by J. H. Hyde, the organizer of a new company known as the Pacific Shipyard and Docking Co. The new firm has secured a lease of six acres of land directly on Commencement bay. Construction work is expected to begin soon.

The Pacific company has made bids for the work of building three large schooners wanted by a Norwegian firm and expects to secure at least part of the work.

The company's plans include the construction of a drydock large enough to take care of the largest vessels now operating on the Pacific coast.

The Pacific company makes the third shipbuilding organization to locate in Tacoma during the past six months. It is rumored that another large plant, which will build steel ships, is being considered by a number of Tacoma's leading business men.

G-E Motor Driven 10-Ft. Band Head Saw, Booth-Kelly Lumber Company

Electric Power Through G-E Motors Used at Booth-Kelly Mill

The splendidly modern saw mill of the Booth-Kelly Lumber Company, at Springfield, Oregon, is equipped with G-E motors and controllers.

Every application of this electrical equipment shows its wonderful flexibility and economy.

From log hoist and carriage through head saw, over live rolls, through edger, combination matcher and resaw, to gang transfer crane and automatic trimmer the timber is handled almost entirely by power from G-E motors. Even the special exhauster for planing mill refuse is driven by a G-E motor.

The results following the adoption of G-E motors in the Stimson and Weyerhaeuser Mills, after the use of these motors in many of the most representative lumber mills of this country, indicate a quality worthy of your serious consideration when next in the market for electrical apparatus.

Our engineers will be pleased to study your local conditions and lay out a flexible and economical motor drive for your mill.

SCRIBNER'S LOG BOOK

Over 1,500,000 of these books have been sold. It has had a larger sale than any book of its kind. It has a log scale, lumber tables and an abundance of other useful information. Price prepaid 25 cents.

Lumber World Review
608 So. Dearborn St., Chicago

A New Book

LOGGING

The Principles and General Methods of Operation in the United States

By Ralph Clement Bryant, F.E., M.A., Manufacturers' Association Professor of Lumbering, Yale University

8vo, xviii 590 pages, 133 figures.

Cloth, $3.50 Net

The information which is contained in this book can be applied by the lumberman in his daily work.

The chief facilities and methods for the movement of timber from the stump to the manufacturing plant, especially logging railroads, are discussed at length.

Greatest emphasis has been laid on features about which there is not much written material available.

Running A Sawmill Right Is a Science

It requires the Best Equipment and Most Capable Workman—*We have both!*

The Quality of Our

KANEY KREEK KLEARS

Proves It

They are manufactured from the Best Short Leaf Southern Pine

A trial shipment will convince you.

Lumber World Review

THE LUMBER REVIEW FOUNDED 1897

CONSOLIDATED JANUARY 1912

THE LUMBER WORLD FOUNDED 1905

Volume XXXI Number 11 | CHICAGO, DECEMBER 10, 1916 | Single Copies Fifteen Cents Two Dollars a Year

TRADE MARK REG. U.S. PAT. OFFICE

More than a year ago announcement was made that the members of the Southern Cypress Manufacturers' Association had determined upon a trade-mark which would be affixed to the end of each board manufactured by them, and that this trade-mark would eventually be given to the public, together with information as to what it stood for in the way of service and quality of material.

The CYPRESS manufacturers have moved slowly in this matter and it has been solely through consideration for the retail dealer. But it is believed that more than a year is ample warning and **ANNOUNCEMENT IS NOW MADE THAT THE ADVERTISING OF THE TRADE-MARK TO THE GENERAL PUBLIC WILL BEGIN WITH THE MARCH MAGAZINES,** some of which appear as early as February 20.

Retail stocks of CYPRESS are now at a minimum and must be replenished. A large majority of these stocks are already supplied with trade-marked CYPRESS This announcement is made in order that those who must replenish their stocks can do so with full understanding of the kind of advertising campaign which will hereafter be behind CYPRESS which bears the Association trade-mark.

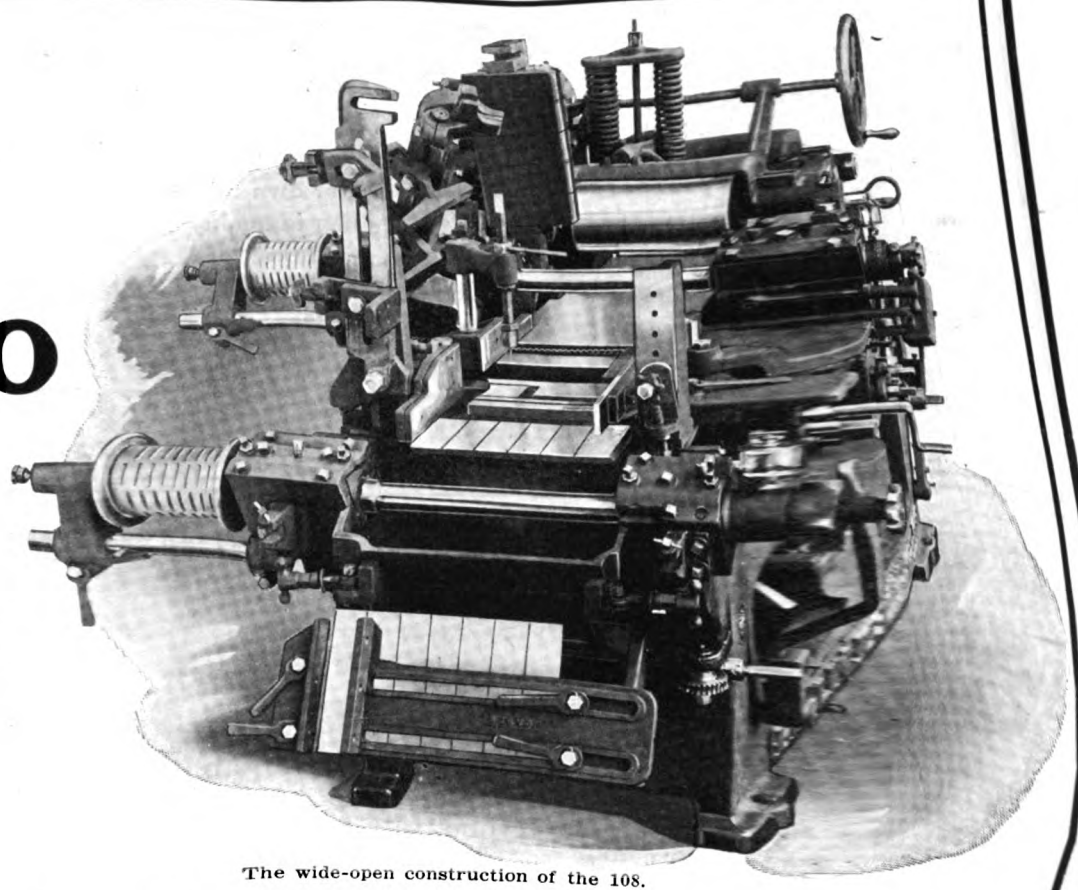
Increase The Ratio of Productive Time!



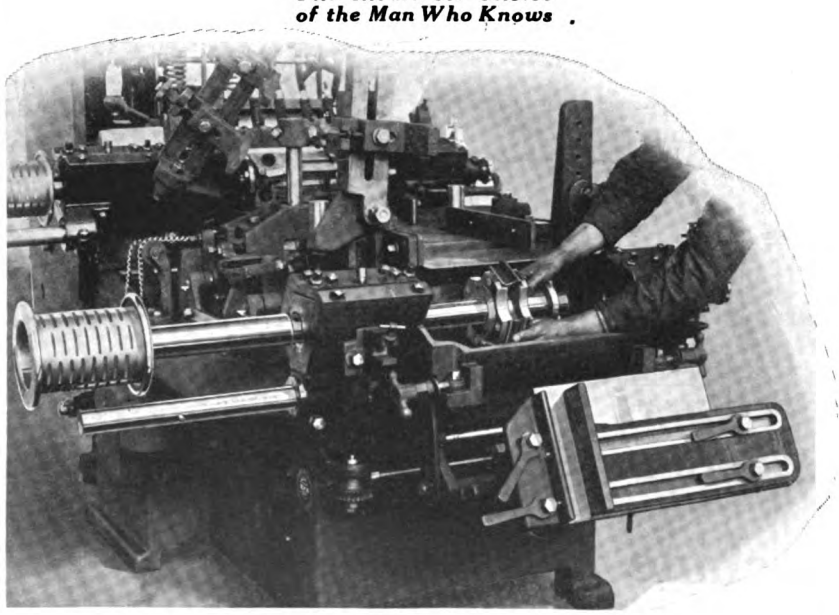
The wide-open construction of the 108.

WITH the prices of labor mounting higher week by week, there's nothing more necessary than utilization of every possible moment in productive effort. In hundreds of woodworking plants there are old style moulders which, under present conditions, are simply lavish in their waste of time. Maybe you've never thought of it because loss of productive time is one of the hardest sources of loss to detect. You've got that waste in your factory if you're using old slow feed moulders with hand made knives, instead of

The Yates Number 108 Moulder

Yates - formerly BERLIN

The Invariable Choice of the Man Who Knows



Slipping a Head on the 108.

GET rid of the old moulders. Don't let them sap, unhindered, the vitals of your business. Investigate the Yates Number 108 Moulder, with its slip-on heads and wide open construction which permits it to be set up in a few moments. Look into the use of milled bits on the Number 108, giving a perfect match of pattern at once, without loss of time in filing and tinkering "to make 'em alike."

Consider the high rates of feed—75 to 100 feet per minute—that can be used, in most cases, without lowering the quality of the output in the slightest degree. When you come to understand the difference between old style moulders and the new Yates high speed Number 108, you'll see where the 108 is a money saving investment.

Send for our folder, "Putting the Prod to Production." It tells all about the New Yates Number 108. No obligation involved.

Decayed Lumber in a Corn Crib (Courtesy U. S. Forest Service)

A Reason Why Substitutes Are Used

LUMBER would not now be engaged in a "war on substitutes" if its proper utilization had been taught a decade ago.

Lumber has so many natural advantages that the lost ground can easily be regained, but use must be made of every possible aid.

Lumber's chief aid is Creosote Oil. It prevents decay, makes wood *more durable,* and consequently *more valuable.*

In the case illustrated above it was logical for the farmer to replace the rotted wooden crib with a steel crib, and to lose faith in lumber as a building material for similar structures.

If the dealer who sold that particular lot of lumber had induced the purchaser to preserve it, these consequences would have been avoided and a customer for lumber would have been retained instead of lost. In addition, that dealer could have made a handsome profit from the sale of the preservative.

Barrett's Carbosota Grade-One Liquid Creosote Oil

Creosoted Wood is the *most effective weapon* against substitutes.

Learn for what purpose your customer intends to use the lumber he purchases, and if it is to be used under conditions subjecting it to decay advise treatment with creosote oil, and ***sell him the proper grade of creosote oil.***

Barrett's Carbosota Grade-One Liquid Creosote Oil is a pure coal-tar creosote oil, especially refined for the treatment of lumber in any quantity by the brush or open-tank method. It is the "standard".

Nationally advertised. Easy to sell. Profitable to handle.

Advise your customers to treat only *seasoned* wood.

Booklets free on request

Special Notice Regarding Change in Name

Since we introduced Grade-One Liquid Creosote Oil, numerous imitations have appeared on the market. For ease of identification, therefore, we have decided to change the name of this product and hereafter it will be known as BARRETT'S CARBOSOTA—Grade-One Liquid Creosote Oil.

He Who Looks Before He Leaps

As a result of more experience than other lumber manufacturers have had in using advertising to shape the public mind, the CYPRESS manufacturers have become sure of their ground and they know what they can do and what they cannot do. They have supreme faith in what trade-marked lumber will mean, both to the retail lumber dealer and to the public, and they also have full knowledge as to the effect upon the public of the advertising of this trade-mark to the public.

Therefore, the announcement hereby made to the retail trade that the advertising of the trade-mark to the public will begin with the March magazines is a step taken with extreme confidence in the results. It is not a threat and can hardly be classed as a warning, but it is a certainty that those dealers carrying only trade-marked CYPRESS will hereafter have the best demand and theirs will be the customers who are thoroughly satisfied.

Furthermore, this is not a threat to those manufacturers who are not permitted to use the trade-mark. Such manufacturers have not the intensity of purpose, the faith in their product, nor the ethical belief in association standards back of them; nor are they the ones who have, by the expenditure of large sums of money, built up the trade of the retail dealer by giving him a ready made market.

Hereafter, the trade-mark will differentiate between those who are aiding the retail dealer and those who are not. It will differentiate between those who are working to create standards of association methods and efficiency and those who are not. It will separate those who have the interest of CYPRESS at heart and who wish a man who once buys CYPRESS to continue buying CYPRESS from those who are concerned only with an immediate sale and who are willing to permit the future to take care of itself. In other words, the trade-mark will stand for all that is best in the lumber trade, and it should be remembered that there are manufacturers who, either because of their methods or the quality of their timber, are not permitted to join the Association.

And please bear in mind that it will be wise to hereafter insist that your orders be filled with trade-marked CYPRESS as it will cost you no more and will be easier to sell.

t The PRESSure Behind CYPRESS

Digitized by Google

ACCOMPLISHMENT

THE STORY OF ACCOMPLISHMENT:

To standardize lumber by making an international reputation for the manufacture of **quality** lumber.

To successfully operate ten great sawmills located in the heart of the finest forests in the South.

To produce the maximum capacity of one million, five hundred thousand feet of **quality** lumber per day.

To market all over the world four hundred and fifty million feet of **quality** lumber per annum.

To deliver to dealers, wholesale buyers and export trade twenty-four thousand, three hundred and sixty cars of **quality** lumber per annum.

To build up and maintain a selling organization of able Salesmen, meeting the lumber trade in all parts of the United States and some foreign countries.

To mass this gigantic organization, the largest lumber manufacturing institution in the world, under one administrative head, directing the growth, development and consummation of its phenomenal success, all in a short twenty-five years—**Is nothing short of a Titan Task.**

Just twenty-five years ago the company started to manufacture lumber in a small way, with three objects in view, namely:

1. The standardization of lumber which meant **quality** lumber.
2. The production of **quality** lumber in sufficient volume from several localities to take care of extensive orders, so that shipments could be made on record time.
3. And last, but most important, to build up an institution so trustworthy as to its method of business conduct as to inspire every dealer or buyer of lumber, or any commercial institution, with absolute confidence, wherever the name of The Long-Bell Lumber Company went forth.

With these three principles in mind, Mr. Long welded together the great interests which have grown from the almost forgotten miniature nucleus in 1891, into not one, but ten enormous sawmill institutions under one head. These ten sawmills, located in the States of Arkansas, Louisiana and Texas, have succeeded in standardizing lumber, placing upon the market **quality** lumber unassailable as to its uniformity and superiority. And today, when the name of The Long-Bell Lumber Company is mentioned, it is understood that the delivery of **quality** lumber will be exactly in accordance with the agreement of time of shipment and quality of the lumber, plus the satisfaction of dealing with an institution that lives up to every contract it makes.

To have accomplished this splendid task is a satisfaction to the management of The Long-Bell Lumber Company's operations, but that satisfaction of accomplishment is only an incentive to further development. An institution founded upon the principles that have made The Long-Bell Lumber Company, world famous in the production of **quality** lumber, is in an enviable position in the lumber markets of this and foreign countries.

The work is just begun. The accomplishment already made demonstrates conclusively that this organization can at all times take care of all orders for long and short leaf yellow pine and oak flooring **quality** lumber, both in this and foreign countries.

As long as the lumber industry of America will supply the trade, so long will The Long-Bell Lumber Company endure and deliver its **quality** lumber to the trade.

There is a salesman in your territory, authorized to quote you the lowest prices we are making on Long and Short Leaf Yellow Pine, Forked Leaf Brand Oak Flooring, Oak lumber, Straight or Mixed car lots, etc.

An inquiry by postal, wire or letter brings a quotation or salesman to you when you want one.

B-S Cypress Co.

In the Heart of
The Best Cypress District

THE following from the National Retail Lumber Dealers' Association's declaration of business ethics—

Branding Lumber

Sec. 3. This association heartily endorses and will support the efforts of all associations of lumber manufacturers which are devising ways and means for the branding of the product of their members and thereby assuring, within a reasonable variation, the integrity of the grade, as well as making possible the identification of the stock, with consequent protection to the retail dealer and the consuming public.

Advertising Lumber

Sec. 5. The retail lumber dealers recognize that their interest lies in the sale of lumber and they are directly benefited by the advertising campaigns which are being conducted by the National Lumber Manufacturers' Association, and by the several associations of lumber manufacturers. This association, therefore, most heartily endorses all efforts directed to the promotion of the use of lumber and commends those manufacturers who are aiding such promotion.

AGAIN THE BIGGEST THINGS IN SIGHT from the vantage viewpoint of our "Wide East Windows" are the HOPES and FEARS of the National Lumber Manufacturers' Association, all of which should command the attention of every timber owner; logger; manufacturer of lumber; wholesaler of lumber; manufacturer of doors, sash and blinds, and the jobbers and wholesalers thereof; manufacturer of boxes, manufacturer of barrels, staves, heading, hoops, etc.; and in fact the interest should extend to furniture manufacturers and all other collateral beneficiaries in the manufacture and distribution of wood products of whatever name or nature.

This much talked-of Forest Products Federation or reorganization of the National Lumber Manufacturers' Association should and ultimately will interest also the retail dealers of lumber, for the wide breach that was made between the retail dealer and the manufacturer in the autumn of 1914 and the spring of 1915 has been bridged over in a hundred places, and there should not remain a figment of memory of the episode—except that it occurred like all other troubles have and—"also passed."

The wonderful interest stirred up in the Inland Empire and throughout the Pacific Coast since the morning of November 13, 1916, must not be allowed to lag, and every secretary and officer of all the various associations of lumbermen and associations in collateral lines should be kept informed and should become interested in this movement, whether or not they were privileged to take part in the Western Demonstration.

Those who participated at Spokane, Seattle, Everett, Tacoma, Aberdeen, Hoquiam, and San Francisco—not less altogether than a thousand individuals—should REMEMBER that after a REVIVAL there is always a BACKSLIDING.

In the emotional HEAT of revival the slightest disturbance outside of the church might lead the least imaginative to expect that it was the pleasant noise of the arrival of a chariot from above in which to carry all men to Glory—when in the afterglow of the revival when the participants have gone back into the normal walks of life, they would know at once that it was either the arrival of the grocery boy or the milkman, and would not be curious enough to even look out of the window to satisfy themselves as to which one it was.

The "Umbrella Brigade," and the "Billy Sunday Squad," as Mr. Downman and his three associates were dubbed, were Evangelists, it is true, and the results of their work are evangelistic and fine; but it

yet remains with the converts to do THEIR part or they will yet have to deal with that Devil of the business world, the Sheriff!

To get the good out of this wonderful tour—the end of the chronicles of which has been reached in this issue of the LUMBER WORLD REVIEW,—even YET depends on WHETHER or NOT the participants are willing to take the advice of our friend Uncle Mac, the negro preacher, whose philosophy is often used up here on these "Wide East Window" seats.

Uncle Mac was at the end of a great revival of his church and as he stood towering above the quivering emotions of his flock, he leaned forward on the yellow pine pulpit and looked down at his people over the tops of his old brass-bowed square-eyed spectacles, and gave forth a parable:

"You all down thar gwine out in de worl' to fight de Devil an holp you'seves up into de Glory; but if you gits fur on de road you mus' know de diffunce betune HOPE an' BELIEF. You HOPES you gwine quit stealing; you HOPES you gwine buy hogmeat for you' famblies, stid nigger gin for you'seves; you HOPES you gwine covet nuffin' but dat which belongs to you; but does you BELIEB? Fur if you doan BELIEB, den dat little lack of BELIEBIN done kill de HOPE."

We are now going to find out if all these Inland Empire and Pacific Coast converts actually believe. If they DO believe it will take the form of MONEY IN THE TILL.

It has been a mighty hard role that we so-called progressives in the lumber trade of the United States have had to perform. We first have had to convince the lumber trade that what was the matter with them was not a CONSTITUTIONAL disease but a SPORADIC trouble that could be cured; then that such medicines as scientific research, association work, and advertising were the proper panaceas to administer; and even THEN the lumbermen have had to be caught and shackled and held down while the medicines were administered.

It has been a thankless task and those who have expected any personal, immediate reward have had their labor for their pains. The reward, however, is coming and above the din of the Christmas shopping we can hear the voice of the prophet clear and clean, crying aloud to the lumber world. "Gangway, please! Here comes your reward; better regional association work; a better financed national body; a broadened market which shall take in the whole world; less waste; more profit!"

Is There a Car Shortage?—Read the Answer.

WE HAVE RECEIVED A COMMUNICATION, every line of which should be printed in red letters and hung on the outer walls. It is pitiable and it is absolutely true. We can only pick out of it in these busy shopping days one little tale among many which illustrates SPECIFICALLY and CONCRETELY the best "car rustling" episode which has ever been presented to us.

In order to climax this story we stop it a little short of where the author did, but when he sees it he will forgive us. Here is the story:

"One of the most ingenious schemes of record is accredited to a lumber manufacturer operating a small mill at Junction City, Miss., on the Mississippi Eastern railroad. This road is the property of the Mississippi Lumber Co., of Quitman, a concern which naturally considers that it is entitled to all or at least most of the cars that are unloaded along its line. The Junction City man went over to Shubuta, Miss., a town located on the Mobile & Ohio road, and there bought an old cow, for which he paid $20. This cow was loaded in a stock car and billed to the Junction City mill, twenty-four miles by rail. While he paid full carload rates, the freight amounted to only about $8, which, under present circumstances, is cheap enough for a car. Upon the arrival of the cow at Junction City that evening it was unloaded and the mill man immediately got to work and by dawn the next morning he had the car loaded with 25,000 feet of his lumber and it went merrily forward to destination. The next day he drove the cow across the country to Shubuta, a distance of twelve miles, and, securing another car, he billed the cow back to Junction City and that same night again loaded the car with lumber. This process he repeated full seven times before the railroad people "tumbled" and then they heartlessly refused to ship the cow any more.

The manufacturer, in explanation of his frequent reshipments of the cow, said that the animal became most obstreperous upon arriving at destination and would invariably break loose and make its own way across the twelve-mile walk to Shubuta, but there are some who doubt this.

"Anyhow, the cow got fat and seemed to like traveling and the mill man stated to our informant that whenever it saw a railroad train it would endeavor to board it. Of course the old cow was getting fatter and more va[illegible] time went on, but the ruthless corporation blocked the ambi[illegible]ts shipper, who was driven to other expedients, althou[illegible]od of ten days he had secured more empties than [illegible]owned the line had received for a month."

W[illegible]all the Yankees were born in New England?

We want this "car shortage" story watched and herewith file it with the Interstate Commerce Commission for that purpose.

And They Do Not Like Our Slogan.

THE ADVERTISING AND SELLING MAGAZINE does not like our lovely little slogan, "There's a wood for every need," which the National Lumber Manufacturers' Association retrieved from 73,000 other slogans even more bromidic than this. We supposed we are just naturally bound to have a slogan, just as we must wear our coats at dinner in the best hotels, should sleep in nightshirts, although some of us did not know what they were made for until we were twenty years old, and should do a vast lot of other things because it is considered customary.

Instead of advertising the beauty of wood, the National Lumber Manufacturers' Association did some slogan advertising along in the spring and summer and received many mail sacks full of some of the rottenest arrangements of English words ever perpetrated, from which, after much extensive labor, some of which had to be paid for, the slogan mentioned above was chosen.

As slogans go, the one that was picked out was no more inane than most slogans are and seemed to fill the bill until we picked up the protest in the November issue of Advertising and Selling. Here is the protest:

"The National Lumber Manufacturers' Association announces that the best slogan on wood, absolutely the very best that it could select out of a number sent in, is 'There's a wood for every need.'

"May we now expect to see locomotives, dyestuffs and steam radiators made of wood?

"That is the kind of a slogan that wins prize contests from the kind of firms that advertise for a slogan. Some time ago it was quite the thing to let the public make up an advertising slogan and dozens of such contests were conducted.

"What do they do with them after they get them? In what advertising do they appear? How many can you name offhand?"

Will The "National" Be Reorganized?

THIS PAPER HAS PRINTED MORE COLUMNS of editorial on this subject than all of the other lumber trade newspapers put together; and while we may have had our labor for our pains, we see very clearly now what the opposition has been to changing the form of the National Lumber Manufacturers' Association as to its name and as to its membership requirements.

Many of the officials of that body who have put in valuable time and thousands of dollars in money to promote the interests of the association have thought that this meant that the reorganization should be of such a nature that ALL the associations of lumbermen in the United States might come into this National body, and as a matter of fact that was OUR thought in the FIRST place; but it has been made clear that such a thing could not happen; that no combination of effort could be effected which would contain associations in which the wholesaler of lumber predominated.

We are not discussing the justice of this attitude, but it exists and it is not to be altered.

On the other hand, the retailers' associations, which did much to start the movement which resulted in the Trade Extension Bureau, got out of the game early on account of their inability to raise funds for the support of the organization—either because of their inability to raise these funds or their lack of desire to do it.

We still believe, however, that the retail dealers' associations should be a part of the movement, even if they do not put up a red cent.

It has now been settled that the H. D. Langille proposition, which has been in part endorsed by the Western Pine Manufacturers' Association and the West Coast Lumbermen's Association, does not contemplate interesting anybody in the National lumber effort who is not interested either in the "tree" or the "refinement" thereof. That, of course, would cut out the retailer, and we would be delighted to sacrifice the retailer for the time being if the other movement could be worked out, and it can and ultimately will be done.

If this reorganization occurs, it will not be in many respects a thing that is new, because as a matter of fact when the West Coast Lumbermen's Association took the word "manufacturer" out of its name a few months ago the movement began. That innovation, however, did not contemplate a closer or bigger National association, but was meant to apply exclusively to the West Coast Lumbermen's Association.

It is pretty generally settled now that some arrangement will be made that will include in the movement the timber owner and such institutions as the cooperage, heading, hoop, stave, sash and door and other associations, and also, if possible, the box associations, all of which bodies are certainly interested in the "refinement of wood" and all of which lines of trade are interested in any movement which will popularize lumber and help it to hold its place in the commercial world.

Conditions in the Lumber Industry

Which May be Improved Through Associational Activities Both Regional and National

By E. B. HAZEN of Portland, Oregon

First of all, the word "can" should be substituted for "may" in the title of this paper. Not what may be done, but what *can* be done, is the subject considered.

The following six items, to my mind, are the big ones which indicate necessities not yet undertaken:

First—A thorough, detailed survey of the industry to find its exact situation in relation to other materials.

Second—Uniform cost accounting to determine the cost of each item produced.

Third—The collection and distribution of accurate lumber selling prices in all important markets, this information to be comparable with "market reports" on other kinds of products.

Fourth—Necessary co-operation of lumbermen with banks for the extension of credit for upbuilding rural population; the future of wood consumption will be in the country largely.

Fifth—Co-operative selling of product abroad and perhaps at home.

Sixth—Market extension through advertising, distribution of literature, and the sending of men into the consuming field to insure the proper use of wood where wood is best.

In fifteen minutes' time it is impossible to go into detail on all of these phases of associational activities which have as yet been undertaken but feebly in a national way and but feebly in a local way in most regions. This last need, namely, the extension of markets, is to my mind the most necessary, provided, however, that the first need given above, namely, the survey of our markets to determine their exact status in relation of our materials to other materials, is pursued contemporaneously. On this phase I am going into some detail.

DECLINE IN CONSUMPTION.

Lumber consumption has fallen off regularly and constantly since 1900 except in 1907. The per capita of wood consumption has decreased from 500 feet maximum per capita to 375 feet per capita, or 25 percent.

Building on the whole increased steadily from 1907 to 1913. Twenty-seven billion feet, board measure, or about 70 percent of 38 billion feet, which was the total 1915 National lumber cut, went into general building.

In 1909, 50 percent of all lumber products consisted of rough timbers. In 1913 only about 28 percent of the national cut went into rough timbers. This crude product has been decreasing in demand and the refined product has been increasing in demand.

Lumber prices have risen slightly during the past twenty-five years.

It is estimated that in 1915, in uses where lumber had once been consumed there had been utilized in substitute materials the equivalent of 8 billion feet, board measure, which was equal to 22 percent of the total national lumber cut and 33⅓ percent of that portion of the cut which was used in general construction.

It is estimated that in 1915 the equivalent of 4 billion feet, board measure, was utilized in

E. B. HAZEN, OF PORTLAND, ORE.

substitute materials, in such uses as roofing, lath, posts, cooperage, etc.

This, then, makes a total displacement of wood products other than fuel of 12 billion feet. There was 15 billion feet of consumption in wood fuel displaced in 1915 by coal and oil.

Some of the 8 billion feet of lumber displacement was represented by products such as substitute packages, which were part wood or all wood, so that there was not an actual total loss to wood, if this is taken into consideration. However, the authority developing these figures states that this 8 billion substitution could be stated as 10 or even 11 billion and still represent less than the actual loss to wood.

Seventy-five percent of the loss to wood has gone to materials costing more than wood products.

Seventy percent of the loss was in classes of use in which the same tendency promised to continue.

Sixty percent of the loss has occurred in the past ten years and is increasing at the rate of 1 billion feet board measure per annum. The 8 billion feet of sawed lumber displacement is divided about as follows: 4 billion feet in building and construction; 1 billion feet in fencing; 1 billion feet in sidewalks, railroad cars, vehicles, silos and wind-mills; ½ billion feet in furniture, ships and miscellaneous; 1½ billion feet in boxes.

Besides losing 1 billion feet of fencing, another 2½ billion feet of posts has been displaced, making the fence consumption loss in that year 3½ billion feet.

The sidewalk loss is 600 million feet a year.

Only about one-half the footage used in the old style box car is now used in a freight car, when built of wood at all, and in 1914, with only a few thousand freight cars built, there was a loss to wood of 260 million feet.

Vehicle construction has succumbed largely to automobile manufacture, which has reduced the consumption of wood in that industry. The manufacture of horse-drawn vehicles dropped from 1,750,000 vehicles to 750,000 vehicles in the past few years, while during the same period the number of automobiles increased 680,000 in number.

Silos have given 50 percent to other materials, largely because of better salesmanship. This has lost to wood 50 million feet per annum, while windmills have ceased to use 25 million feet per year because of the use of steel.

Furniture making, which normally uses 1 billion feet per annum, surrendered 175 million feet in 1915 to other materials.

One and a half billion feet of box shooks have surrendered to the substitute containers, which are, however, a partly wood product.

Lath output has fallen off 30 percent, equivalent to 210 million feet per year.

Out of 200 million feet for ships, 150 million has surrendered to other materials. There is every evidence, however, of this coming back strong this year.

Cooperage utilization of other materials amounts to 325 million feet.

A report on the wood block pavement laid in 444 cities in 1907 indicates 2.92 percent of the total pavement laid, while in more than twice the number of cities canvassed in 1915 the percentage was only 2.37.

These are some facts regarding the inroads of substitute materials. Now a few facts as to the increase in use of these commodities which are displacing lumber.

INCREASED CONSUMPTION OF OTHER MATERIALS.

The substitutes which have displaced lumber have been mainly concrete, steel, brick and other clay products.

Since 1900, concrete and steel products have increased 300 percent, while during 25 years bar iron has increased 25 percent and cement 60 percent. Wall and plaster board has increased 6,700 percent since its use was introduced only a few years ago.

The cement output today, reduced to board measures, is equivalent to more than one-half the lumber cut.

Patent roofing increased 200 percent in ten years.

Brick sales increased 50 percent in fifteen years.

In 1913, 217,000 freight cars were built—more than in any year since 1889, excepting 1906. Steel underframes and wooden superstructure cars represented 27 percent; all-steel except roofing and decking, 15 percent; and all-wood box cars, only 5 percent; while 42 percent were all-steel.

Wooden shingle output has decreased about 20 percent since 1904. Nearly 50 percent of all roofing manufactured now represents substitution. The increase in production of substitute roof covering from 1904 to 1914 was 200 percent. The displacement is the equivalent of 1½ billion feet, board measure.

A recitation of a few facts pertaining to the activities of the substitute people and the extent of them, and some of the differences in

Digitized by Google

the modus operandi of the handling of their business will be pertinent.

SALES METHODS OF SUBSTITUTE MANUFACTURERS.

Much more aggressive merchandising on the part of the substitute producers has brought with it much more exact knowledge concerning the properties of substitutes than have ever been presented by lumbermen regarding their commodities.

Research and engineering work has played a large part, as well as aggressive merchandising.

Lumber has been encroached upon in many a place where it was superior or just as suitable.

The same kind of merchandising and the same kind of data, as a result of research and engineering, will reinstate wood in many places.

Much of this work cannot be done by the manufacturer individually, but must be done co-operatively; yet much of the necessary effort must be pursued by the right kind of individual manufacturing enterprise.

Substitute prices have decreased steadily, due to new discoveries and scientific production, until recent months, when the war situation has forced most everything upward.

Substitute producers have made their products known and consumers have been instructed in their use. Defective materials have been replaced willingly, and manufacturers have made what the consumers wanted, not what best suited their own convenience. On the other hand, lumber has suffered because of varying standards of product, and often because of no standards.

The successful substitute producers have developed not only their associational activities to a high state of efficiency, but have developed their individual producing units as well. They have equipped themselves to capitalize the results of their co-operative accomplishments through the most intensive, high-class, efficient manufacturing and selling. This is as important as the co-operative effort, for unless the manufacturing enterprise is equipped and able to follow up the conditions created through market extension work, the association funds and association efforts are wasted.

There are 77 cement companies in one association which contribute for co-operative market extension per year about $750,000.

There are 25 asphalt shingle producers who are spending $200,000 a year co-operatively.

In 1911 over $3,000,000 was spent co-operatively by the producers of 30 lines of commodities which were actual competitors of lumber. They had then been at this market extension work at that rate for seven years, having used $21,000,000 in extending the use of their various products.

One company manufacturing agricultural implements during the past four years has

Reached over twenty million people by literature, lectures, agricultural courses and co-operative educational work;

Printed and distributed nearly fifteen million booklets;

Circulated 1,500 lecture charts and lantern slides before five million people.

Why are we not paralleling these efforts with our campaign to accomplish the covering of these implements with suitable sheds? The implement people work hand in glove with us.

WHAT ARE WE GOING TO DO?

Now all of this array of facts should not daunt the lumber manufacturer, but on the contrary it should stimulate him to doing something to save the declining wood consumption. This is not the first time that a large industry has found it necessary to change its methods of manufacture and selling.

It would not be an extravagant prognostication to claim that the lumber footage which has been surrendered to other materials can be recovered in some form through the proper individual enterprise effort and through the proper co-operative effort.

There is much occurring which is pointing to some recovery in spite of us; but instead of this fact helping to satisfy the lumbermen, it should serve to stimulate them to constructive work, individually and co-operatively, to place the industry back upon its feet. The lumbermen have been discouraged, but this "bound-to-come improvement" should serve as a tonic.

The unprecedented railroad earnings will bring the roads back into the market as heavy purchasers.

The rising cost of all substitute materials is going to help lumber.

The rebuilding of Europe will help the American lumber market.

The discovery by consumers, without even our suggestions, that some of these substitutes which they have been using are not superior to wood, is already evidencing itself in freight car use, in roof coverings and in other ways. All of these things will help in spite of continued inactivity.

There are, however, many constructive things now working which have been initiated by and which are being pursued by lumbermen themselves; and there are many things which will be developed and pursued which will, to my mind, do more than all other things combined to place the lumber industry in a successful position. We have nothing to be alarmed at excepting our own disinclination to exert ourselves in the proper way in our own business and in support of joint effort.

The direct merchandizing abroad by co-operative expert companies is one about-to-be-realized activity which will be a big thing for the business.

The spirit of co-operation evidenced by the departments of the government through the Federal Trade Commission, the Forest Service and the Department of Foreign & Domestic Commerce, is going to be of great assistance.

There are many uses where wood is inferior to other materials. This consumption we will lose and should lose. We must not forget, furthermore, that the utility and price of the substitute will limit the lumber price.

We must support association work in every phase; we must push wood where wood is best; we must push wood in pavement, shingles, stave pipe, silos, pulp, veneer, cooperage, and eventually in products of wood distillation. We must make shingles fire retardant; we must creosote our lumber; we must determine the limitations of our product and be governed accordingly. Out of this sort of effort some old uses will be revived, some new uses will be discovered, and unfair encroachments will be successfully combatted and wood use will be supported.

There has already been a large amount of increase in consumption of products of the tree regarding which we know little. There has been a steady increase in wood pulp since 1889. In that year 750,000 cords were consumed; in 1914, 4,500,000 cords were consumed. Consumption of wood waste for distillation has increased during ten years from 675,000 cords to 1,200,000 cords, and one-third of the waste was from lumbering operations. The tanning industry now handles 1,000,000 cords of waste per year. There have been a lot of new possibilities revealed through the Forest Products Laboratory at Madison in recent years. Charcoal is used in the manufacture of black powders and in driving bullets from shrapnel. They are using large amounts of acetic acid produced from hardwood distillation. Pure wood alcohol is going into formaldehyde, which is the universal disinfectant. A lumber company in Pennsylvania is securing from its waste a gross return of $124 per acre. Only one-third of the tree goes into lumber. Consider, therefore, the possibilities ahead of the lumber industry. Over $1,000,000 worth of dye was worked out of mill waste last year. Grain alcohol is yet to come from wood waste, and we are assured that it will before long be a commercially successful process. At Madison they have even developed sausage casings, tapestry and artificial silk; they have made a good kraft paper from western pine.

We are optimistic about this lumber industry because of opportunities before us for doing things, not because we think that the pendulum is going to swing back and we are going to escape without effort. There is only one way to accomplish much of what is necessary and to push the clouds away and that is through organization, both individual and co-operative.

In the final analysis, the benefits of association work are to be secured only in the exact ratio that the industry is willing to give of its time and money to a consistent and painstaking study of itself. We will get no more than we put of ourselves into the work of stabilizing and standardizing the industry. How far each individual is willing to consecrate himself to this work depends solely on his mental attitude toward the value of co-operation as an uplift movement. You cannot and should not expect others to do what you should do for yourself. Get in and help, and that right now.

Advertising and salesmanship are twin high-powered projectiles which have successfully battled down prejudice, increased demand and capitalized hitherto neglected opportunities in other industries. Why not apply the same constructive methods to the lumber industry? It needs it. Without these modern stimulants its future is doubtful and progress toward recovery will be slow.

INCREASED DEMURRAGE CHARGES.

A Fletcher Marsh, chairman of the traffic committee of the Lumbermen's Association of Chicago and Edwin E. Hooper, secretary of the association, have issued the following announcement to members:

Chicago, Dec. 4.—In line with permission given by the Interstate Commerce Commission on Friday, December 1, due to the present car shortage, the railroads have been authorized to put into effect special demurrage rates up to May 1, 1917.

According to these tariffs there will still be two days' free time and thereafter charges will be assessed on the basis of: $1 for the first day, $2 for the second day, $3 for the third day, $5 for the fourth day and each day thereafter.

These tariffs will be effective three days after issuing and our members should anticipate their going into effect some time during the latter part of the week.

The Logging Manager—His Requisites and Responsibilities

Paper Read at the Annual Banquet of the Appalachian Logging Congress, Held at Knoxville, Tenn., October 18-19, 1916

By JOHN RAINE, Meadow River Lumber Co., Rainelle, W. Va.

Today's passing pageant of autunmal glory is made possible by the gift of the trees. Prof. Bailey must have had the trees in mind when he wrote his book, "The Holy Earth." Our own poet Bryant sang

"The groves were God's first temples,"

and another has said that the trees ever lift their arms aloft in adoration of the Creator of the Universe. Now, it is with such elements of beauty and utility that our business has to do. In the minds of some, we lumbermen are simply despoilers of these bounties of nature. Then the recent criticisms of the Forest Service should startle us into taking account of ourselves and see if, indeed, we have been wasteful, unscientific and inefficient in the management of our business.

The lumberman has a double responsibility to society, that he despoil not the beauty and utility of our forests which are, in a sense, the heritage of all the people; and to himself and allied interests, that he transform the mature products of the forest into the varied articles of man's need at a reasonable profit.

A young man entering the game a few years ago remarked to the writer, after a year's careful observation, that there was less science displayed in this business than in any of which he had knowledge; and the average lumberman must admit that there is a grain of truth in the charge. Possibly the government Forest Service has made the same discovery.

STUMPAGE AND LOGGING THE CHIEF ITEMS OF COST.

In the hardwood belt with which we are familiar stumpage plus the cost of delivering logs into the mill pond constitutes probably two-thirds of the cost of lumber production. The general high efficiency of the modern sawmill plant and the fairly uniform scale of wages paid, do not permit a wide variation in the cost of manufacture of rough lumber. The competition of highly organized buying and selling agencies makes the sales manager's position a comparative sinecure. These two factors constitute, so to speak, dead level costs. So we must look to the logging end of the business for reform in extravagant costs of production and for the elimination of waste. Here is where big money is used in carrying on the business and here is where the big leaks occur. For every industrial success or failure some one man is primarily responsible. In the lumber game that man is the logging manager and it is the purpose of this paper to hint at the place that he should have "in the sun." If, then, this man is primarily responsible for the success of an operation, how shall we distinguish him?

A THOROUGH KNOWLEDGE OF WOODS LORE.

The logging manager must have an existence before the operating company is formed. Many a lumbering proposition would never have been organized for failure had the logging manager first been consulted. Here, sometimes, "fools rush in where angels fear to tread." Some years ago an observing woman remarked to the writer, after he had examined a tract of timber, that a good many men had looked it over and that some day one with more money than brains would appear and that they would sell it. The sale soon took place and with disastrous results. Here is where our hero must shine. He must be a real timber estimator. He is a good judge of the quality of the stand estimated, as well as its quantity. He has gained his knowledge and judgment by continuous estimates and study of various forest stands and further by following the logs through the mill and comparing actual outcome with his own prior estimates. He is conservative in all of his estimates. He accepts and uses the scientific methods of the Forest Service. While a practical man, he is yet broad enough to appreciate all that exact science has to teach him. Because he is capable as an estimator and sure of himself as to the skidding feasibility of the same, his judgment must determine the commercial possibilities of any given stand of timber.

A CRIME AGAINST SOCIETY.

I have in mind one unprofitable proposition that was carried forward against the positive expert advice of the logging manager. It seems a crime against society to carry forward an operation that dissipates nature's gifts and brings no gain to the operator, all such operations being stressed for income to meet current obligations, overstock consuming markets and hence help to lower values. A recent unfavorable operation was brought to our attention where the estimating was done by a successful mill man and the logging manager was not consulted. The outturn of this particular tract was not much more than 50 percent of the estimate.

The logging manager must be able to put a proper value on stumpage in relation to its ultimate market. Other things being equal, the higher the transportation charges the lower the stumpage values. His knowledge of ultimate values and proportion of grades will here serve him a great purpose. The proportion and value of No. 3 and lower may be the very factor that shall determine the profitable possibility of a given tract.

IMPORTANCE OF SKIDDING KNOWLEDGE.

Then our manager makes himself perfectly familiar with skidding conditions. Here is where he must be onto his job or costs will consume him. He makes a careful survey of the topography of the country and determines what system of logging will best suit his conditions. He may have to use every known system to economically operate his whole tract or tracts. He has an open mind and will not deny the old methods simply because they are old. There is a possibility of overreaching the mark with cumbersome machinery, but generally he is safe in getting away as far as possible from brute force. He has the modern outlook and recognizes that this is an age of steam in logging; and the nearer he can get the mill to the railroad, the railroad to the timber and the steam skidder to the individual tree, the cheaper logging he can do.

THE CONSTRUCTION OF RAILROADS.

He insists on being his own engineer and determines grades and curves within the limit of safety. His judgment only in individual situations determines where railroading shall cease and skidding begin. He realizes that the log nearest the steel is the cheapest skidded, but amount of available stumpage must determine to what distance he can push his steel and thus cheapen the actual skidding. The nice balance between railroading and skidding must be determined by our manager and here is just where the most expensive mistakes are sometimes made. Local conditions must determine what shall be done. Each stream, each mountain and, finally, each logging proposition, as a whole, may require different treatment and the real office of the manager is to determine how each situation is to be handled for economical production. Because A has been successful with one method of logging is no reason why B should use the same method. We have one situation where we feel confident that nothing but an overhead cableway system will give us reasonable skidding costs. Rough ground conditions and besides, the saving of railroad construction dictate that this is the ideal method. Other situations may point to the ground skidder as the best method for lowering skidding costs.

Our manager must determine the relative merits of standard and narrow gauge railroading. Personally, we have never been able to persuade ourselves that the narrow gauge was economical for the handling of not only logs, but bark and wood as well. It has been our experience that if we are to handle large stocks of logs with consequent heavy equipment, the track and ties must be practically as durable for the narrow as the standard gauge, and there is consequently little saving in the cost of construction and no saving in the cost of operation, and an actual loss in the handling of bark and wood. The size of the operation and the possibility of future railroad development will have some bearing in determining gauge.

We have situations where we feel entirely confident that the railroad splitting the hills and thus materially shortening the skid, whether all steam or part steam and horse skidding is used, will very materially reduce our costs. Here farms dot the hilltop and spread out into the bottoms, so that this will keep us well within the timber limits as well as shorten the length of the skid, whatever method is used. Another operator may find it to his advantage to keep on the tops of the mountains, but his problem is not ours. So here the manager must decide upon the best course to pursue to insure the cheapest cost for dropping the logs at the pond.

Under present labor conditions and in our mountain country it is costing about $1,200 per mile for standard grading construction.

IMPROVED LOGGING METHODS.

Looking backward, our manager finds that much progress has been made in recent years in logging methods. However, he is not satisfied but is still working to improve upon the past. The method that has the most pressing present appeal to him is to deliver the timber to the mill in the whole tree, or practically so,

where it can be cut for both grades and lengths under the eye of one man, who shall be specially qualified for that work. This is a problem that we would like to hear fully discussed in this congress.

ELIMINATION OF WASTE.

Conscious of the value of stumpage, our ideal manager is constantly working on the problem of eliminating waste and conserving all of the economically valuable wood. This means that he insists on securing all the valuable timber, and bringing to the mill of such—and only such—parts of the whole tree as are commercially profitable. For the residue he is seeking avenues of disposition in other directions; and here he calls to his aid the chemist and the government. There are no doubt commercial possibilities in all wood waste, and the government could render no better service than to aid the lumberman in finding uses and a market for all such waste. These latent values some day the magic wand of the chemist, under government aid, will reveal.

He believes that the lumberman has an obligation to future generations and so uses all means to conserve the newly growing timber. The recent statement of the chief forester of the United States, that by reducing waste it is possible to harvest a continuous crop of hardwoods from the present stand, and at the present rate of production, quickens his pulse and stirs him to renewed efforts to lessen this waste and help to conserve these valuable hardwoods. To this end he combats the forest's greatest enemy—fire. Especially during dry seasons he insists on carefully hooded and screened locomotives, with all trains fully equipped with hose and buckets; the outlook tower being carefully manned and constant watchfulness to prevent the smallest beginning of fire. In this and all other matters he invites and utilizes government supervision and co-operation. He does this the more cheerfully because he realizes that there is a vital relation between forest conservation and the public good. As the foresters say, "Burned timber pays no wages" and "A tree will make a million matches. A match may waste a million trees."

PROPER COST ACCOUNTING.

Our ideal manager is a crank on cost accounting and is able to show from month to month not only all the varied items that go to make up his totals, but adds thereto ample depreciation to consume his plant during its operation. Only thus can he keep from deceiving himself as to visible profits up to the close of his operation. However, others may figure that low grade lumber costs less to produce than high grade. For himself he can prove by detailed accounting that his small and low grade logs cost more to saw, trim, grab, skid, roll, load and haul to the pond than the larger, high grade logs.

WELFARE OF EMPLOYEES.

He is a strategist and knows how to handle men. He looks after the physical comfort of his men. His model camp is built on wheels; is well lighted and ventilated; has ample storage and kitchen facilities; the dining car is clean and roomy; sleeping quarters are kept clean and orderly. He provides a well equipped reading and writing room; pure water is always supplied and the sanitary conditions are well looked after, for any man below par physically or mentally is the worst asset of any camp.

He has an open mind and, while keeping his own counsel and doing his own will, is eager for suggestions from both superiors and inferiors. He is not like the laws of the Medes and Persians, that change not, but he is ready to discard the mistakes of yesterday for the light and wisdom of today. Especially does he solicit suggestions from the men immediately about him, for they are rich in practical ideas.

Of necessity he must be the chief counsel of the business. New problems of the greatest concern present themselves daily and he has constant need of all his faculties. Hence he must keep his mind clear and body fit at all times. In short, he is a personality unhampered by the past, believing all things of the future; living, thinking, planning and accomplishing day by day the highest results in the game of lumbering.

If he is unknown to any of us, this congress will be an aid in developing him by presenting and discussing the problems in which he is vitally interested. This should secure his presence and co-operation at these meetings.

Doors, Sash and General Millwork Review

Current Conditions of the Country's Market

By LUCIUS E. FULLER

Although winter is drawing on apace and building operations are gradually falling off and the holiday season is evidently already under way, there is still unusual activity visible in the door and mill work industry through all channels from the manufacturer of shop lumber to the consumer of mill work. New orders are not quite so plentiful, but there are enough estimates in hand to keep everybody busy for the next month or even longer. Possibly there is as much new business coming in at the estimating offices as there would be ordinarily at the opening of a spring season.

Factory operators report that they are unable to promise a fixed delivery period and in consequence are not particularly anxious to heap future trouble upon present difficulties. Low stocks of mill work are reported in all ultimate distributing hands and stocks at retail will need to be heavily replenished within the next sixty days in order to be prepared for spring trade. The big stock factories are running full on all of the stock sizes they are able to take on and are more than filled up with special work. Shipments of raw material are greatly hampered by the car shortage, which, however, now shows some signs of easing up. The window glass market is full of strength and the shortage of glass shown during the summer and early fall has not been fully relieved, which imparts a healthy tone to all kinds of glazed mill work. From present indications it seems that the position of the door market is exceptionally favorable to activity throughout the winter, which, as usual, will no doubt be interrupted by a few days of inventory and repair after Christmas and during the first week of January.

Status of Shop Lumber.

Buyers and shippers of shop lumber everywhere report scarcity of stock and inability to get shipments forward within a reasonable period. Inland Empire pine, of both the Idaho and Western varieties, is selling fairly well when there is any to be obtained, but the stocks are greatly reduced and in poor assortment, while because of car shortage shipments can be forwarded only with great difficulty. California white and sugar pine are both in strong demand, but the car scarcity militates with equal force in that quarter. Northern white pine is by no means plentiful and representatives of that industry in the Chicago territory say that they are able to fill only a fraction of their requirements, not only by reason of the car shortage, but because of the actual scarcity of stock. No. 1 shop common Western pine has been selling here lately on the basis of $41 in 5-4 and 6-4. No. 2 shop is somewhat more difficult to secure and its price has lately risen at times to as much as $35 for the same thicknesses. No. 3 shop is quoted around $25, these prices being all on the basis of Chicago delivery. Northern white pine shop is exceptionally strong, being held as high as $52 for No. 1 in 5-4 and 6-4, $43 for No. 2 and $32 for No. 3.

Trade in Chicago Territory.

According to local authorities, the activity previously noted at the various Chicago door warehouses has not been lessened, with the single exception that new orders and inquiries are not so pressing. The various wholesale establishments in Chicago are gradually making headway in reducing their order files, but in some cases are still indifferent to taking on any new business. They say that what they have aready in hand will give them all the work they will find it possible to get out this month and a great deal of it will no doubt have to go over the first of the year. Many of the establishments are running short-handed, which accounts to some extent for their inability to state with any degree of certainty as to the time of delivery on orders already on their books.

The Strength of Prices.

There has been no recent advance in the sash and door list, but values are firm on every item. There is some disposition to raise a notch or two on car loads, although bulk inquiries are not yet heavily in evidence. At the present writing No. 1 and No. 2 doors are quoted at 71 percent discount from the list in lots of 100 openings or more and at 69 per cent for small lots. Glazed sash are at 75 and 73 percent, respectively. There is a big demand for all sorts of interior trim. Veneered doors are not particularly strong at this time, but are moving in fair volume and are not held in uncomfortable surplus.

Another Advance in Window Glass.

While many of the window glass factories, both machine and hand operated, were run-

Digitized by Google

ning steadily throughout November and up to this date, no large additions have been made to the reserve stocks of window glass and the scarcity of cars has been shown in a considerable slowness of movement. Some of the factories have been greatly hampered, especially during the recent cold snap, by inadequate natural gas supply and some have even been forced to close down for this reason and may have to adapt their plants to other fuel. When the weather again approaches the zero mark there will be, no doubt, many other factories who will have to close down, and this contingency is bothering the glass manufacturers in no small degree and without doubt will result in a considerable curtailment of the production during the winter. Another difficulty that has been recently revealed is a scarcity of skilled workmen. In view of all these unpromising features, the American Window Glass Co. withdraw its outstanding quotations on November 28 and on December 5 announced an 18 percent advance on all sizes and qualities, making the current discounts on the following basis: Single strength A, first three brackets, 86; single strength B first three brackets 88; larger sizes A and B, single strength 85. Double strength A 86; double strength B, 87 and 5.

In the Minneapolis-St. Paul District.

Trade in the middle northwest is normally quiet, or at least is slowing down as usual at this time of the year; but the sash and door distributers of the Twin Cities say that they have been having a rather surprising amount of new business, no small part of which comes from the country retailers, although the bulk is from city trade. Open weather has continued much later than had been expected, so that building is being forwarded more than the retail dealers had counted upon. The warm weather has somewhat reduced the demand for storm sash and storm doors, which had reached considerable proportions two weeks ago. Prices on all mill products are very strong and the outlook for a large car load trade this winter is excellent.

Door Conditions in the Northwest.

Competition in the door trade is rather sharp in the Puget Sound territory. It is reported that recently some of the mills have sent representatives into eastern trade centers and, in spite of the inability to secure cars, have made some rather heavy concessions in the discounts on fir doors, involving belated delivery as a matter of course. One of the large plants on the coast has been shut down for some time owing to the inability to secure cars for its eastern trade; besides, the margin between manufacturing cost and selling profit has narrowed down to an unusual extent, a feature little relished by manufacturers. However, business as a rule is inclined to be fairly active.

Features of Eastern Trade.

Recent advices from the leading sash and door distributing points of the east are indicative of a continued activity in manufacture and a steady influx of orders for jobs nearing completion. Baltimore reports several good building projects, involving a large amount of mill work and the dealers there on the whole are well pleased with their current business. A fair demand is shown at the sash and door distributing houses at Buffalo, N. Y., who are having a good trade in special work and stock items and ore also supplying a satisfactory quantity of storm goods. Trade in the east has continued well into December, owing to the open weather.

Southwestern Demand.

There has been visible a large business for this time of the year throughout the southwest, as reflected at such door distributing centers as Wichita, Kan., Oklahoma City, Okla., Kansas City, Mo., and St. Louis, Mo. The demand from that territory may be expected to fall off, however, from this time forth through an expected lowering of temperatures and the advent of unfavorable or stormy weather. Prices, however, have held up well at all southwestern points. The factories are working busily on unfinished jobs and seem to have plenty ahead to keep them going, especially at Kansas City and at the other southwestern points named.

A REDWOOD BUNGALOW IN AUSTRALIA

The Redwood Export Co. of San Francisco, of which E. W. Neunaber is manager, is a corporation made up of several California redwood mills for the purpose of serving as a central medium and clearing house for exporting redwood, and has attained great success since its organization in 1912 making a specialty of shipping clear dry redwood to Australia, tending not only to stabilize values,

PERSPECTIVE OF THE AUSTRALIAN BUNGALOW

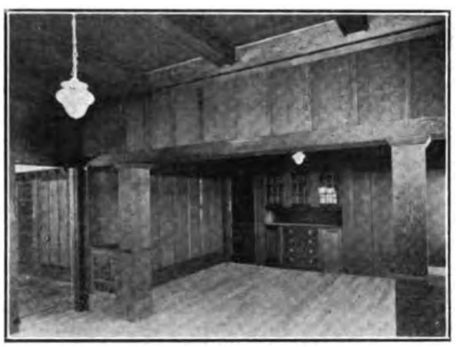
but also to increase the quantity exported from approximately 34 million in 1911 to 50 million in 1915 as a result of co-operative exploitation.

With the purpose of still further increasing the use of redwood through educating the contractors and consumers as to its merits and usefulness, W. R. Morris, a young lumberman who had served his apprenticeship in the mill of the Union Lum-

A NOVEL GATEWAY

ber Co. of Fort Bragg, had already made a trip to Australia so that he was familiar with conditions there, was employed to represent the Redwood Export Co. at Sydney, New South Wales, to personally explain methods of working and finishing redwood, distribute publicity matter descriptive of this wood, calling attention particularly to its lasting qualities, fire-resistant characteristics, absence of pitch, and also that the destructive white ants of that region do not seriously affect redwood.

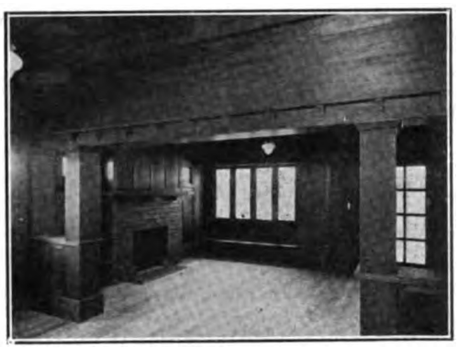
Recently acting upon Mr. Morris' recommendation, the Redwood Export Co. authorized him to enter into arrangements to put up a redwood bungalow as an object lesson to the Australians, which would serve as a permanent exhibit, they to stand the expense of labor and material, the latter to be purchased from the local "Timber and Joinery Merchant," Mr. Morris to arrange to accept the site offered as a donation by Stanton & Son, Ltd., who were laying out a new suburban tract near Sydney at Rosebery. The accompany-



WALLS AND CEILING OF CALIFORNIA REDWOOD

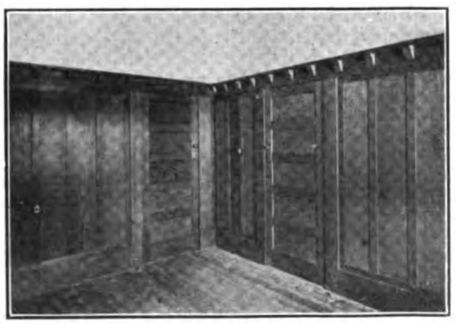
ing illustrations indicate the details of this charming bungalow of a type that appeals to the Australians, for suburban homes. The Rosebery tract consists of 300 acres and is located opposite the Rosebery racecourse, where the multitude will observe it and be influenced strongly to use California redwood lumber and shingles in their prospective homebuilding.

The bungalow has five rooms, the interiors finished simply but effectively. The living room and dining room walls are paneled with 16-inch vertical boards, finished with dull stain and wax, ceilings with T. & G. "lining" and built up beams. One bedroom and the hall are finished with clear wax, well rubbed down, so as to preserve the natural pinkish tones of the wood, the other bedroom is finished in a gray stain while the fact that redwood holds paint well is emphasized in bathroom and kitchen. This gives a good variety of suggestions for finishing redwood to visitors, to whom methods are fully explained by Mr. Morris who also distributes redwood samples, descriptive booklets and miniature redwood shingles. Exploiting



A COSY CORNER

shingles is real missionary work as the Australians are accustomed to use of corrugated iron and slate. The siding is rough "weatherboards," stained with an oil stain. Only rough lumber is used on the exterior, this rough surface effect being carried out in posts, plate and in the rustic



DOOR HEIGHT PANELING WITH PLATE RAIL

gateway. Roof and gables are shingled with redwood shingles laid 5-inch to the weather, with zinc coated old-fashioned cut iron nails, a custom which Mr. Morris is introducing as a necessary precaution that may well be spread throughout this country as well to insure the best roof.

DOWNMAN-COMMITTEE'S WESTERN TOUR

Detailed Narrative of the Happenings at Portland and San Francisco—A Cordial Reception Extended Everywhere—Much Good Accomplished by Eastern Lumbermen.

THE smiling countenance at the left has been chosen as emblematic of the feeling of the committee of the National Lumber Manufacturers' Association who recently visited the Pacific coast at a period directly after finishing their tour and validating their tickets for the home trip.

Just where this photograph came from nobody actually KNOWS. A prominent manufacturer of fir lumber gave it to the writer; and the fir manufacturer said that it came to him from the east somewhere. He thought either a newspaper man or an advertising counsellor or some such collateral to the lumber trade had given it to him.

Between us—realizing that at least it had come out of the East—the source of all good things—we concluded that it had a place in this aftermath story of the Downman invasion of the West.

Invaders are usually enemies. These invaders, R. H. Downman, A. R. Turnbull, R. B. Goodman and Charles S. Keith were evangelists.

They were not crusaders—but they might be in some future time if so be the lumber manufacturers of the Inland Empire and of the West Coast when they come to think it over, do not consider seriously this affair after their guests have gone their ways.

We believe Evangelists go out offering peace and benediction. The Crusader went forth to win his way with sword and flame—but come to think of it OUR Evangelists must have looked like crusaders to their hosts when they began to prove to them that there was no such thing as early dimunition of the timber products of the Southeast, the East, or even the South.

It was easily the saddest news which West Coast and Inland Empire lumbermen have ever heard and differed so radically from all OTHER preachments on the subject that the manufacturers of lumber beyond the Rocky Mountains have not YET recovered from their surprise.

THE WEST CANNOT GET RICH BY "WATCHFUL WAITING."

The western holders of timber—following W. B. Greeley's assertions made at Portland, Ore., late in October in his paper read before the Western Forestry and Conservation Association, where he prophesied that the stumpage of the west was about double the amount it had been considered to be in the past—learned through the evidence offered by the Downman party of Evangelists that the timber of the Northeast, Southeast and South was being reproduced in considerable measure as it was being cut off and certainly showed the westerners that their only way out at a profit was to increase their WORLD trade rather than to expect to get rich by holding their stumpage for some "better day."

SOME people learn by PRECEPT, some by EXAMPLE, some by a more excruciating lesson than example—which we dub EXPERIENCE.

With precept, example and experience we trust that the lumber manufacturers East and West will soon come to actually KNOW that through trade extension is their only hope and that trade extension cannot be accomplished in a playhouse way in the future as it has been in the past; that the lumber manufacturer will proceed to take care of his business and the individual participants therein just as if the BUSINESS were an invading army in an enemy's country; and that just as the decision of battles runs with the heaviest artillery, so does success in trade run with the cleanest knowledge of distribution.

To the average maker of a trade paper it might seem that we were hanging on to this story an unconscionably long time, which we would be doing, of course, if this was mere news; but it is really an epoch-making event and ought to be the basis of all future prosperity of the lumber trade in America, and would be if all men estimated each other at their face value and took each others' assertions at par.

In the last previous issue of the LUMBER WORLD REVIEW we printed R. H. Downman's masterly statement of what the National Lumber Manufacturers' Association has accomplished to date, and also printed the only complete detailed statement of the entire event contained in one number of any trade newspaper.

The last two items of the story, however, were covered by wire, namely, the demonstrations at Portland and at San Francisco.

In this issue is given a somewhat detailed review of the Portland and San Francisco episodes and also in large relief in the front part of this publication is found a paper offered at one of the Portland meetings by that brilliant economic engineer and lumber manufacturer, E. B. Hazen, of Portland, Ore.

Our policy in this affair is to keep this whole movement in the minds of the lumber manufacturers of the country until they are convinced that the necessities of the occasion warrant the trade extension investment of not less than TWO HUNDRED THOUSAND DOLLARS a year, which the trade shall gladly and willingly contribute.

SOME DETAILS OF THE "NATIONAL" COMMITTEE MEETINGS RECENTLY HELD AT PORTLAND, OREGON.

Mr. Downman's committee remained in Portland three days. Two of those days were taken up with sight-seeing of an educational nature, and one day devoted entirely to two of the most enthusiastic meetings of citizens, lumbermen and bankers that has ever met a committee of esatern business men in Portland.

ASTONISHED AT LACK OF WOODEN PAVEMENTS.

Referring to the trips that the visitors took on the Columbia Highway, the Evening Telegram of Portland said:

"Accompanied by O. M. Clark, F. C. Knapp, E. B. Hazen, George B. McLeod, H. D. Langille and Chester J. Hogue, the visiting lumbermen were taken for a drive yesterday over the Columbia River highway. Although the visitors were charmed with the scenic beauties of the famous highway, opportunity was given during the drive to digress upon the ever-present topic of where are the weak spots in the lumber industry.

"For example, Mr. Keith was quick to notice the creosoted wooden block pavements on the downtown streets and across the bridges, but none on the paved highway itself. He drew attention to the few stretches of block pavements as being among the first he had seen since leaving the larger eastern cities, and remarked to the Portland lumbermen in the party upon Portland's slowness to generally adopt this type of paving as standard. He was unable to understand why, with eastern cities using constantly increasing quantities of Douglas fir paving blocks, the far western cities, where these blocks are manufactured, seemed prejudiced against the use of the product of their chief home industry. In the east, wooden block paving ranks ahead of vitrified brick for street and highway surfaces, although the cost of brick is less."

FIND THAT "PATENT ROOFING" IS USED FOR FOOD.

Continuing in its visity manner the Portland Evening Telegram chronicled an observation of R. B. Goodman's on the highway trip and which it referred to as follows:

"In urging the lumbermen of the Pacific northwest on yesterday's sightseeing trip to join the proposed nation-wide co-operative movement to resist the encroachments of substitute building materials in the legitimate field of lumber uses and to create new uses and markets for forest products, the party at all points had been holding the red cedar shingle industry as a 'horrible example' of declining trade in the face of substitute encroachment, because shingle manufacturers are either too proud or too poorly organized to fight. In all these talks the manufacturers have been extolling the advantages of shingles over other roofing materials, but, as Mr. Goodman expressed it:

" 'We can no longer proudly say that shingles, for all purposes, are better than patent roofing. We believe that wooden shingles are just as fireproof as a majority of the so-called fireproof roofings which municipalities specify in their building codes, but yesterday, out on that beautiful Columbia highway, we fellows of the lumber industry simply had to stop our automobiles and take off our hats to patent roofing as against cedar shingles. Cows were eating a strip of it along the roadside in preference to grass, and apparently enjoying it as much as we did our chicken dinner at the inn close by.' "

MR. DOWNMAN SUMS UP THE SITUATION.

A Portland paper printed an extensive interview with R. H. Downman, from which we quote the following:

" 'Prices of lumber are now 10 percent lower than they were ten years ago,' said Mr. Downman this morning, 'in face of the fact that the market value of all other commodities has shown an average advance of 33⅓ percent in the past seven years. Lumber is being produced below cost at the mills because of cut-throat competition. Taxes are so high that they are eating up the profits of timber operators and mill owners. To meet the heavy carrying charges and overhead expenses, operations are carried on at a book loss, but it is less expensive to run the mills than to permit them to be idle.

" 'Another problem is to avert the losses to the industry because of modern merchandising methods and wasteful production and competition where there should be co-operation in supplying markets.

" 'Solution of our difficulties will be found in increasing the demand for lumber for all structural uses. Greater volume of production of lumber is not so necessary as is increase of consumption. In the south, east and middle west lumber producers have tried new methods of marketing and promotion, which, coupled with co-operation to stimulate demand, have been found to be profitable. We are telling your lumbermen and timbermen here what we are accomplishing and what our plans are for the industry as a whole. That we shall have their support I am certain. The Forest Service at Washington tells us that 65 percent of the tree is wasted. That is another matter receiving our attention.' "

NOONDAY LUNCHEON AT THE PORTLAND CHAMBER OF COMMERCE.

For touch and go swift response and clever business discussion, the noonday meeting at the Portland Chamber of Commerce on Monday, November 20, was one of the best general sessions for the citizens at large that was held on the trip.

It was quite informal and was held for the particular purpose of listening to an address by Charles S. Keith, president of the Southern Pine Association, the Central Coal & Coke Co. of Kansas City, and one of the leading directors of the Chamber of Commerce of the United States of America. Mr. Keith has spoken several times on the subject of co-operation, but never more clearly than on this occasion.

A local paper of Portland printed a resumé of Mr. Keith's short address which got at the meat of the affair in extremely fine shape, and in the interest of our readers who cannot have too much of this thing, there will be found under this head—at the close of the division—that review of Mr. Keith's talk.

O. M. Clark, of Portland, introduced the speakers on this occasion, who were in their order R. H. Downman, Everett G. Griggs and J. H. Bloedel.

Mr. Downman explained the trip of the eastern lumbermen in a nutshell when he said:

"We of the east have come west to study your problems, tell you our troubles, but firm in the conviction that the lumber industry can be lifted out of the slough of despond by co-operative ef-

Digitized by Google

fort of the manufacturers. We are today living in an age of co-operation. Manufacturers in other lines of industry are working together, in friendly competition, but with a real attempt to improve general conditions. Why should we of the lumber industry, second in importance in the nation, first in these western states, be the last to learn that only through co-operation can our problems be met."

CHARLES S. KEITH'S "CO-OPERATION OF NATURAL RESOURCES."

Herewith is a rèsumè of Mr. Keith's address, which appeals to us so strongly, and which every lumberman ought to cut out and put in his pocket:

"The visit of our party," he said, "was undertaken in order to secure a nearer view of the problems of the industry in the west and to emphasize the necessity of closer organization and co-operation. What is true of our industry is true in general of the commercial problems of the country."

Mr. Keith proceeded to outline the progress of each century of civilization and how it was necessary for each period to meet the great development problems of the time by wise statecraft. The development of new machinery, he showed, forced the development of co-operative effort in industry. He outlined the manner in which the national Chamber of Commerce was formed during the Taft administration in order to provide national expression for the needs of business, and to allow business to study itself. How the chamber has in four years submitted only sixteen questions to referendum, and how, therefore, the present purpose is to secure such an expression on the natural resource development problem, in which the lumber industry is interested, was explained before Mr. Keith took up the problem itself.

He told how, in the oil industry, the waste has brought up the price of petroleum products today, how the mining industry in America costs the lives of four out of every thousand workmen, through the cut-throat competition which prevents proper care for the men, while in England, under more hazardous conditions, the loss is less than one to the thousand. He outlined the report of the national Chamber of Commerce committee, which is now being sent to a referendum of the nation as follows:

"The committee reached the conclusion that these conditions were superinduced by unreasonable competitive conditions, brought about by the potential forces of our state and federal trust acts. Such a condition could not exist in any of the older countries of Europe; such waste, both of men and of materials, is in itself criminal. The governments of foreign countries would compel co-operation to the end that these conditions might be eliminated. So the committee has recommended that there should be remedial legislation to permit of co-operative agreements under governmental supervision in all industries engaged in the conversion of primary natural resources into such forms as first become available for utilization, either as raw material for other industries, or for general consumption. The committee recommended that the legality of such co-operation should be predicated upon three concurring requirements; they should tend to conserve the natural resources, preserve human life and lessen accidents, and be in the public interest; and that further they should be under the supervision and observation of a federal trade commission.

"I am told that in the states of Oregon and Washington undue and unjust burdens are placed upon the lumber industry in the form of taxation. In no other country have we such forms of taxation on natural resources as we have in the United States. In effect such taxation, acting as a compelling force to manufacture and sell the product, regardless of market conditions, is confiscatory.

"I merely mention this as showing the necessity for co-operation in business in order that congress may be properly informed as to the necessities of the country."

Mr. Keith closed with some examples of the manner in which co-operation in the industry has helped the industry, showing for instance that in the east the lumber interests are greatly extending by co-operative activity, the use of wooden paving blocks. In the east, where these blocks are largely used, through the co-operation of the lumbermen active in association efforts, there is a premium of 50 percent paid to get the wooden blocks, over the cost of many other paving materials. In the west, he said, there is comparatively little of such pavement, despite the presence at hand of the best material in the world, with costs even.

"Co-operate and sell your own product at home as well as elsewhere," he concluded, "and by co-operation help yourselves to help yourselves."

A "SNAP SHOT" GROUP OF MESSRS. R. H. DOWNMAN, A. R. TURNBULL, R. B. GOODMAN, CHARLES S. KEITH, WARREN BULLOCK AND HONORABLE ALEX POULSEN, EVERETT G. GRIGGS, MR. SHIELDS AND OTHER ENTERTAINERS AS THE PARTY WAS SAWMILL AND SHIPYARD GAZING IN THE GRAYS HARBOR COUNTRY.

AFTERNOON GENERAL SESSION, PORTLAND CHAMBER OF COMMERCE.

Immediately after luncheon, Portland lumbermen convened in the Chamber of Commerce and had a series of heart-to-heart talks under the chairmanship of E. B. Hazen, which were of a nature so similar to other conferences held on the tour that no discussion of them will be developed here. Messrs. Downman, Turnbull and Goodman gave "testimony" as to what was being done in their various associations at home, and the lumbermen listened intently to all that was said.

The tendency seemed to be to reserve the strength of the speakers for "the big show" scheduled to be staged that evening.

THE EVER-TO-BE-REMEMBERED MEETING AND BANQUET OF THE PORTLAND CHAMBER OF COMMERCE.

There were easily four hundred people present at this occasion, lumbermen, loggers, sawmill employees, bankers and other business men. The banquet was presided over by Fred C. Knapp, of Portland, whose reputation as toastmaster reaches far beyond the Oregon line, in all DIRECTIONS.

He pledged himself not to indulge in facetiousness, undue levity, or the repetition of so-called Ford stories.

Mr. Knapp paid a high tribute to a young man of Portland who had "endeared himself in the hearts of all the people who had met him here in the west; a young man coming from the prairies of Iowa and making his mark deep and long, not only on the western mind but on national affairs in the lumber world."

Mr. Knapp said he was a young man "who is called upon whenever there is any question to be decided upon the line of manufacturing or forestry." He referred to E. B. Hazen and asked him to enlighten the audience upon what he considered association work, either regional or national, in regard to what that work might do for the lumber business.

Mr. Hazen delivered his paper with great force and it gives us pleasure to present it elsewhere in this issue of the LUMBER WORLD REVIEW.

After Mr. Hazen had finished, Toastmaster Knapp said: "Mr. Hazen is a remarkable man; he is the only man in the state of Oregon who produces absolutely sanitary lumber. He is the only man in the state of Oregon who is able to sidetrack the waters of one of our most beautiful falls and use them in the creation of his business and get away with it."

Mr. Knapp recited the history of the United States from both Plymouth Rock and Jamestown, showing the inclination of business men to cooperate ever since the beginning of the federation of the thirteen original states, drifting easily in his finest manner to the organization of the National Lumber Manufacturers' Association and introducing Mr. Downman.

MR. DOWNMAN'S "APPRECIATION" OF THE NATIONAL LUMBER MANUFACTURERS ASSOCIATION.

R. H. Downman does not stick readily to the printed line and clothes his thoughts each time in a different dress, each time bringing out something new.

Mr. Downman said that the National association

GOODMAN, THE "ANALYST," DRINKING IN THE INFORMATION OF LONG THE "SEER."

was formed 14 years ago, and had taken up many activities, having had born to it at least three children who are still alive, two of which have at least reached their majority, namely, the Credit Rating branch, and the Inter-Insurance branch. The Trade Extension, or third, branch of the association, which had been instituted only recently, was apparently no less firmly fixed than the other branches, but it needed much more money to put it on its feet than it had been able to get so far in its history.

Mr. Downman got more nearly at the heart of the trouble in the lumber industry in one phase of his talk that night than anyone has ever before done when he said:

"THE NATIONAL ASSOCIATION, AS TO ITS LAY MEMBERS, IS MADE UP OF HUNDREDS OF PEOPLE WHO DUMP THE READING MATTER WE DISTRIBUTE INTO THE WASTE BASKET AND REFUSE TO BE EDUCATED. THE LUMBERMAN OUGHT TO BE EDUCATED BEFORE WE ATTEMPT TO EDUCATE THE PUBLIC. THE PROBLEM IS HOW TO MAKE THE LUMBERMAN READ THE THINGS THAT ARE VALUABLE TO HIM."

He believed that it was quite true that 80 percent of the people of the United States had never heard of fir lumber and many of them had never heard of yellow pine lumber.

He said that it had been discovered a short time ago that the architects and engineers were making statements to their clients that there was no more white pine. That awakened the white pine interests into advertising activity. In an architect's office in New York a man of great prominence, George Lindsay [illegible] of the White Pine Bureau of Publicity) was invited to observe that in one of the largest architectural libraries in the country that there was not a single book on lumber except reports from the Forest Service at Washington.

He said the lumbermen had first to educate themselves and then to undertake to educate the public. Such a movement demanded money. So far the lumbermen have not provided any money, and they must expect to do it if they expect to get anywhere.

He showed what the National Lumber Manufacturers Association has done in the lumber freight reclassification question. In that case the lumbermen had worked together, put up a solid front and he had no doubt as to the favorable decision that would result.

He referred to what the National Lumber Manufacturers Association had accomplished in getting a just revenue bill through congress, and said that it had been estimated that if the lumber interests were to pay association dues at the rate of 25 cents a thousand on every foot the association mills would make, it would take them 500 years to pay back the savings accruing from that activity.

He referred to a government report showing that in a comparison of values of 34 species of lumber between 1906 and 1915, 32 out of the 34 have been sold at less prices today than then, and that the two that have sold for higher prices today than in 1906 were cottonwood and basswood, which as lumber are a negligible quantity of the production. On another list of general commodities he observed that the lowest increase had been 19 percent, the highest increase 467 percent, with an average increase 85 percent. There must be something radically wrong with the lumber business if it had fallen so far behind all other commodities.

He had hoped Mr. Hazen would refer to the displacement of wooden lath, by metal lath and wall board, in the last few years, which latter business had increased in 10 years from nothing per year to $4,000,000 worth per year. He referred, as he had done several times before, to a closer government affiliation with general business, and especially with the lumber business. He mentioned the present problem of securing trade representatives to go abroad and the attempt to finance the movement and indicated the general apathy of lumbermen on this question by recounting the fact that he had sent out personally 800 actually signed letters—not mimeographed, but each letter originally written—and out of the whole lot got only 30 satisfactory answers.

An amusing thing in this connection had been the fact that several score lumbermen had been very insistent in recommending a particular man for one of these positions of foreign trade commissioner, and in sending out these letters they had gone to the gentlemen who were so solicitous about their friends, but not one of that lot had offered to put up a dollar to finance the proposition.

He felt that every manufacturer of lumber and logger and the banker who loaned them the money with which to operate, were interested in this movement and that the banker should insist that one of the essential qualifications of a lumberman should be that he was a good association man.

Mr. Downman said that lack of support of association work was the lumbermen's trouble; that the National association had been dragging its anchor chains so long that it was a marvel it had not gone to the bottom. He, however, proposed to stay with the ship. He said that the National had barely $19,000 a year to live on; that he produced only 125,000,000 feet of lumber at all of his mills annually, and that the little stipend which the National association eked out of the lumbermen of the United States would be about 15 cents a thousand on his output alone, and that he would consider that he was getting his money's worth if HE were assessed that amount of money, and thus had to pay the entire NINETEEN THOUSAND DOLLARS to support the National Lumber Manufacturers Association.

Following Mr. Downman's talk, Charles S. Keith was introduced and made a very illuminating talk concerning the province and purpose of the Southern Pine Association.

CHARLES S. KEITH RELATES "ASSOCIATION" HISTORY.

Mr. Keith told of the early inspection days and the long years of fight for standardizing grades and the old foolishness of gentlemen's agreements on prices which were "broken" before the gentlemen left the room; and recounted those times and the changed attitude of the government toward association work, and the reasons for an incorporated company selling service rather than the old fashioned voluntary association.

He told that the first charge to the members was 15 cents a thousand, subject to a credit of 5 cents in exchange for certain information to use in getting out statistics, and that that sort of procedure got the statistics, and without statistics that were real no association could prosper.

He told of their score or more of committees which had held hundreds of meetings during the last year, and how the association felt in regard to the rather heavy fees they had paid, believing that for each 5 cents a thousand paid out they would get 25 cents back; that inside of the next three years they expected to spend as much as EIGHT HUNDRED THOUSAND DOLLARS annually.

The bulk of the remainder of Mr. Keith's talk was a shorter form of what has previously been printed in this series of articles, closing with this peroration:

"Our entire methods of marketing need a revolutionary change. Until we make that change we will not, or cannot expect our manufacturing operations on the 10-year period will be profitable. My own opinion is that if we had charged to our cost of production the replacement of values and the proper extinguished charge for our production plant in the last 15 years, it would show that we had made a loss. The only profit in the business has been that of converting the raw material which we have purchased at a low price in the past years, and we have carried it at great cost.

Digitized by Google

We have been timber merchants and not lumber merchants."

The toastmaster introduced R. B. Goodman, after having related how it happened that he, the toastmaster, had escaped being a hemlock manufacturer when they wanted to GIVE him the stumpage, and had referred to the fact that it seemed hemlock lumber had just gone up $2 a thousand.

R. B. GOODMAN TELLS OF HEMLOCK PROMOTION.

Mr. Goodman said in part that the situation in Wisconsin was the same as the situation elsewhere in the lumber world, and referred to the fact that there had been a decrease in consumption from forty-four and one-half billion feet in 1909 to thirty-eight billion feet in 1915. The price of lumber has also decreased, but just a few days ago they had marked up the price of hemlock $2 a thousand, but it was not to advance the price but to advance the price LIST. They had got out the new price list at $2 higher than before. They were so in the habit of selling it $2 off the old list that when they marked UP their price list $2 they (by that method) got the NEW price.

He pointed out the fact that increased money for lumber is not increased buying power when compared with the prices two years ago. He said that while the consumption of lumber is decreasing and the PRICE is decreasing, the COST of production is STEADILY INCREASING.

They had lumbermen in the lake states who would not co-operate, the same as in the west.

There were three classes of these men, all optimists of a dangerous kind; the FIRST, who believed that dimunition of the supply of timber would make the timber holder rich in the end; the SECOND, those who expected the pendulum to swing back; and the THIRD, those who are looking for all kinds of demand for lumber after the war is over.

Continuing, Mr. Goodman said: "We have in the lumber business two or three or four lean years and then we have a prosperous year like they tell me they have in the salmon district here in Oregon.

"When I got out of a former business I thought being possessed of natural resources that were being diminished so rapidly that I could not possibly LOSE—for diminishment of the other fellow's product meant an increase in my own.

"It was a basic mistake. I have had access to the records of Wisconsin lumber companies running throughout the past forty years, and the lumbermen of Wisconsin of today are not making as much profit by the thousand feet of lumber sawed as they were fifteen, twenty or twenty-five years ago. The price may have advanced, but the cost has increased, and even that last is true in Wisconsin in spite of the fact of utilizing the products of the forest in a closer way than in any other part of the United States. We are even beating the packer who uses everything in the hog but the 'squeal,' for we do utilize the 'bark' of the tree. Notwithstanding THAT close USE our margin of profit is less than it was five years ago."

Mr. Goodman said this pendulum theory was nothing but THAT—a theory. If, after several years of low prices, there are a few months of high prices, then right there is a car shortage or some other trade interference that offsets the rise in values. Then when the pendulum slides the other way and we have plenty of cars, there is a shortage of labor in the woods, which is the case right now in the face of this $2 advance in hemlock, for there are not enough men in Wisconsin who will work in the mills to operate them at more than 65 percent of their capacity.

Concerning the after-the-war rainbow, Mr. Goodman said it was all an emotional, born-of-a-hope PROPHECY, and that we are just hunkering down by the roadside and hoping and waiting while Canada, for instance, is looking ahead for business, and the government of British Columbia is actually advertising for it, as Mr. Downman had pointed out that afternoon.

The speaker told the story of the evolution of the advertising of hemlock, saying that when they got to the point of being driven each month into a smaller territory, until they were on the verge of not even getting cost out of their hemlock, they got their people to pay 7½ cents a thousand for advertising hemlock, confining their advertising to the 10-cent rate territory which was their limit of distribution. They created the demand among the men who could use it. In this they enlisted the co-operation of the retail lumber dealers, by paying two-thirds of the cost of his advertising, and there, too, they had induced the dealer to handle lumber instead of handling the BY-PRODUCTS of lumber.

GOODMAN TRANSFIXED.

THIS PICTURE SHOWS THE "WASTER" AS IT TRAVELS NORMALLY TO THE BURNER OF THE GRAYS HARBOR LUMBER COMPANY PLANT AT ABERDEEN, WASHINGTON, WHERE A SIGNAL MAN AND GANG MAKE NEARLY EIGHT HUNDRED THOUSAND FEET OF LUMBER DAILY.

MESSRS. WEYERHAEUSER, BULLOCK, PATTEN, TURNBULL, DOWNMAN AND KEITH AT THE WEYERHAEUSER MILL PLANT.

Now that they have attended to the case of hemlock, they had organized the birch producers.

It was all a matter of formula like a prescription at the druggist's; they could arrange similar campaigns for southern pine and fir and any other kind of wood, and if they could afford to do it they would be pleased to take over the entire national lumber product for the purpose of attending to the trade extension work, because they thought that the application of the same principle and practice would solve any lumber marketing problem. Again, the burden of all the national work along that line would be welcomed by the hemlock people because they realized that their prosperity is dependent upon the prosperity of the other regional associations.

In closing, Mr. Goodman said: "IF YOU ARE GOING TO SELL YOUR LUMBER LOWER THAN COST, IT FORCES US TO SELL OUR LUMBER LOWER THAN COST AND THAT IS WHY WE ARE WORKING WITH THE NATIONAL LUMBER MANUFACTURERS' ASSOCIATION; THAT IS WHY WE ARE BEHIND EVERY ONE OF THE ACTIVITIES OF THE NATIONAL LUMBER MANUFACTURERS' ASSOCIATION. WHAT IS FOR THE INTEREST OF ONE IN THE LUMBER INDUSTRY IS FOR THE INTEREST OF ALL."

A. R. TURNBULL, OF VIRGINIA, TALKS "ADVERTISING."

Mr. Turnbull said that their state had furnished the first president of the National Lumber Manufacturers' Association, and that while they had helped to sound the note in the beginning and showed what the need was, they realized the need more at the present time than ever before.

Mr. Turnbull carried throughout the trip a canvas roll thirty-two feet long and about twenty-four inches wide which had pasted on it clippings from the newspapers of the United States, all clipped upon one day, each clipping doing something in a news or an editorial way for some substitute for lumber. The clippings represented printed matter one column wide and 192 feet long. This, Mr. Turnbull said, was for no other reason than to show that the "substitutes for lumber" advertised in the daily papers and advertised LIBERALLY.

Mr. Turnbull said that the wants of the National association at present reminded him of the story of the man who asked for the loan of $5 of a semi-deaf friend, who seemed not to hear him. Whereupon the needy one asked for $10, whereupon the plethoric, semi-deaf one blurted out: "Hell; I heard you the first time."

Mr. Turnbull said the National association demanded only $100,000 a year five years ago, but now Mr. Downman was asking for $210,000 a year. The lumber manufacturers had better have heard the first request.

Mr. Turnbull said that the North Carolina Pine Association had moved slowly, first contributing 1½ cents, next 4 cents, next 6 cents, now 8 cents a thousand feet, and that if they take on this new proposition—which he did not see how they were going to get away from—their appropriation for association activity would amount to 9½ cents a thousand feet.

Digitized by Google

Mr. Turnbull made a statement that will never be forgotten on the Pacific coast: "IF YOU ALL THINK THAT THE LUMBER IN THE EAST IS ABOUT TO BE EXHAUSTED AND THAT THE BUSINESS THERE IS GOING TO BE GONE IN A FEW YEARS AND YOU WILL BE MAKING MORE PROFIT HERE, I WANT TO CORRECT YOU ON THAT GUESS, FOR YOU ARE MISTAKEN ABOUT THAT. YOU WILL BE SURPRISED ABOUT THE AMOUNT OF PRODUCTION IN THE EAST TODAY. I HAVE BEEN INTO THE FORESTS WHERE THE FIRST BOARD WAS CUT ON THE AMERICAN CONTINENT AND I HAVE BEEN THROUGH THE TIMBER OF MINNESOTA AND MICHIGAN I HAVE BEEN RECENTLY OVER ALL OF THAT COUNTRY WHERE OUR ASSOCIATION IS AT WORK AND WE ARE PRODUCING ABOUT AS MUCH NOW AS EVER AND THE SUPPLY IS NOT BEING APPRECIABLY DIMINISHED. WE ARE WITHIN A $3 RATE A THOUSAND FROM PHILADELPHIA AND ABOUT $1.50 FROM BALTIMORE AND $1.25 TO $1.50 FROM NEW YORK. I HAVE NEVER SEEN A COUNTRY WHERE TIMBER GROWS AS IT DOES BACK THERE."

CAPTAIN ROBERT DOLLAR, OF SAN FRANCISCO, IS "DISCOVERED."

It was a genuine surprise to find Captain Robert Dollar present. He was introduced by Chairman Knapp as standing for all that is honest, noble and upright in business and in private life.

Captain Dollar protested that Toastmaster Knapp had not notified him that he would talk. He wanted the lumbermen to know however, that now while he was a shipping man he was basically a lumberman. He told many stories of his boyhood days in the lumber camps.

Captain Dollar thought that the foreign trade was the safety valve for the lumber interests. The hard times that the Pacific coast has been suffering from is due only to the lack of foreign trade. It was not altogether the lack of ships, but a lack of knowledge of how to get the foreign trade in proper quantity.

He said we must remember that the foreign trade was just an exchange of commodities and that one of the great faults with Americans is that they think only of selling and not of buying: but to engage in true foreign trade you must both buy and sell, and that those who owned the ships which are trading privately realize that better, likely, than anyone else, because they have got to have return cargoes for their steamers for in default of getting return freight they have got to have a DOUBLE freight rate for the load out, which makes the trade impossible. "So if you want foreign trade to come into your city and to go out from your city, you must send out goods and be prepared to buy back goods on the ship that returns to your port.

Canadi...

Captain Dollar said there is a balance of trade in favor of us such as there never was before; that if the war does not stop pretty soon we will have the gold supply of the whole world bottled up in this country. Japan has the balance of the trade in the favor of her today because they are buying and selling both. Japan having also the ships is gaining great advantage from the high rates of freight. In order to gain the highest modicum of profit you have got to have ships that are owned in your own port and they will bring back trade to you.

Captain Dollar is very much against all the recent policies of the government toward the shipping trade, and said that there is no nation in the world (except the United States) which is NOT trying to help their merchants to carry on a foreign trade. He believes that the government at Washington is having a change of heart. Captain Dollar spoke highly of the Webb bill and believed it would go through, and spoke very highly of the Chamber of Commerce of the United States of America.

He considered that the present seamen's bill simply turned the Pacific ocean over to Japan.

Chairman Knapp introduced E. T. Allen, of Portland, whom he denominated the "man behind the gun" of the Western Forestry and Conservation Association and who recounted the desire to cooperate which permeated his organization. He advocated in co-operation a triple alliance of state, federal and private interests.

THE LUMBERMEN ARE ROASTED AND TOASTED.

Chairman Knapp introduced W. A. Thompson, of the American Newspaper Publishing Association, who put the lumbermen on a spit and toasted them before a hot fire.

We would like to print Mr. Thompson's remarks in red letters edged with gold.

After a pleasant story Mr. Thompson said in part as follows:

"Gentlemen, a stranger coming in here would go away after listening to you so far this evening with the suspicion that there was something wrong with the lumber business. At least, he would feel that the boy who built the millenium did not build it out of wooden timbers.

"I believe that every substitute that has eaten into the lumber business has been mentioned tonight with the exception possibly of the fact that the new custom of using electric chairs in prisons has somewhat cut down the demand for timber for scaffolding.

"I do not believe that any one has referred to the other important fact that the heads of those who do not agree with us are no longer made of wood, but of solid ivory.

"Back in the effete east, where dissipation is no longer bounded on the north by milk and on the south by cider, they still have use for that humble expression that a "little hair of the dog that bit you is good for the bite." (Laughter.) It seems to me that the dog that has bitten the lumber industry is advertising and I think that you gentlemen will find your remedy in a little hair of that same dog that bit you. I don't believe, however, that the individual lumberman is convinced that the lumber business ought to be advertised. My experience with association work is that men get together and come to the result that something ought to be done on a certain subject, but when the man comes around with the hat he finds that his

Digitized by Google

friends and neighbors are sitting looking out of the window.

"I believe that you gentlemen should determine whether or not something should be done; and then, further, whether or not that something should be advertising. The amount of advertising that has bitten into the lumber industry is not alone the advertising that has been printed—you cannot judge it by that only—for it has created a sentiment and it will do so every time. That sentiment has been spread broadcast. Opinions and experiences are exchanged by consumers and prospective consumers. It is the kind of advertising that is done by one man to another by word of mouth and it is advertising of a kind that is a good deal stronger than newspaper advertising and yet it comes largely THROUGH newspaper advertising.

"It seems to me that you must make up your minds whether or not your National association has been on the job enough in this respect—whether or not advertising will help you—and I believe that the first job your National association has and if it doesn't do any other job during the next year than this, it would have gotten its money's worth—and that is that the eighteen or nineteen thousand dollars should go for a good purpose. Perhaps that is a hope. Perhaps it is error. I don't know.

"I believe that your National association might well take that money and hire a man who is a combination of spell-binder and collector and let him go out and talk to the individual lumberman and try to show him the need for this something which has to be done. I think that that something is going to be advertising, because I do believe that you can get back, through advertising, what you have lost without it the last few years.

"That man would travel and he would meet the associations and bring facts and figures which he can readily obtain to the individuals and the lumber manufacturers and he would show them the need for advertising. As I said to some of the gentlemen this afternoon in a little personal talk we had, in his capacity as collector let him carry along with him in his pocket six inches of gas pipe to use in case of emergency. Some people need it.

"First make up your minds that something must be done and then 'What'? What shall that something be? Then give liberally to it, with vision and foresight and believe in your industry and tell the fellow next door, and he will tell his neighbor and his neighbor will tell ME."

Toastmaster Knapp referred to J. H. Bloedel, of Bellingham, Wash., as one of the men who "do" things and asked Mr. Bloedel to open the books and tell of the past, present and future of the West Coast Lumbermen's Association.

A WONDERFUL ADDRESS BY J. H. BLOEDEL, OF BELLINGHAM, WASH.

Mr. Bloedel started by saying that he had been preceded by an all-star cast of lumber presidents, the four presidents from the north, the south and the east, not to speak of the ex-presidents thrown in for good measure, and confessed that he thought it would be difficult for him to interest his audience. He referred to the history and accomplishments of the West Coast Lumbermen's Association since its organization in 1901; how the Pacific Coast Lumber Clearance Association had been organized in the Puget Sound district; then the Oregon-Washington Lumber Manufacturers' Association in the Columbia River district; the Southwestern Washington Lumber Manufacturers' Association, and in 1909, realizing that the efforts of all of these various associations were directed to a common end and that their interests were mutual, they were consolidated under the name of the West Coast Lumbermen's Association. This association has a membership today representing from 95 to 98 percent of the actual number of men in its territory who are engaged in the production of lumber. He regretted that there were not 100 percent of the manufacturers in the association, but, he said, there are three types of men who do not become associated in this kind of work and enumerated them as the indifferent man, the tightwad, and the man who is too stubborn and obstinate to change his opinion. Mr. Bloedel stated that the indifferent man would be willing to work for the association if he understood its principles and objects and the necessity for association work as he should understand it. This man is willing to become an association member if he can be "shown," and this was the man that he wished particularly to talk about—the indifferent man. He continued:

"I know, by the number who are present that you are interested in this work. You are just as keenly interested as the gentlemen who have traveled 4,000 miles from the east to get their message to you. You are interested to make the lumber business a success, just as much so as these gentlemen are, and therefore it is to the indifferent man that I am talking tonight.

The tightwad is hopeless. He is the type of man who would come in under your umbrella to save the expense of buying one for himself.

Now, the other type of man — the man who is obstinate — he is the kind of a man who has once said he would not give a damn for association work and, because he has once said that, he would not allow himself to be shown or to change his mind. He is not amenable to reason very often, but if he can be shown he will sometimes change his opinion."

He reviewed the activities of the West Coast Lumbermen's Association—took them through the association rooms and went through its offices, as he said. He said that the ultimate object of all association work is to get results in dollars and cents and he would show that it is a fact that his association gets results. It informs its members first as to the current markets and secondly, as to the probable amount of stocks on hand; it tells them

Digitized by Google

of the number of orders on hand, the actual number of ships, giving the information about prices to the members daily and about stocks on hand weekly. Calculations may be made as to the probable future of the market by the perusal of the reports received from 124 mills weekly, which gives the amount of stock on hand the previous week and estimates the amount that will be on hand the current week. It gives information as to the number of car loads that are ordered, stating that there were so many car load orders received and so many shipped and stating how many orders are left, and this shows the members whether orders are increasing or decreasing. The members who make a study of these reports are able to make a pretty accurate estimate of the future of the market. If they don't make a study of these reports, they are not getting out of their business all that there is in it.

Mr. Bloedel referred to the work of the inspection bureau, which employs four or five inspectors and the members would like to have more. These men standardize grades. An inspector has been located at Minneapolis who looks after all of the complaints that are received from the eastern territory.

The engineering department of the association, Mr. Bloedel said, had been established upon the completion of the Panama canal, when the coast manufacturers were looking forward hopefully to a new market for millions of feet of Douglas fir. The eastern structural engineers stated that they did not know the character, qualities or structural strength of Douglas fir and the result was that the Forest Service and the authorities of the University of Washington got together and gathered the facts relative to the strength and other qualities of fir and the book was published and can be purchased from the association for $1 a copy.

The shingle industry, Mr. Bloedel said, languished for want of organization and from the free importation of shingles from British Columbia, where a better quality of shingles was offered than by the United States manufacturers, and they took away the market. It was found necessary that the manufacturers on this side must make as good—or better—shingles as the British Columbia people made. It was necessary to get this information to the public and the shingle association was organized for this purpose. The grades were made uniform at all the mills and there was a uniform trademark burnt on each bundle, the name adopted being the "Rite-Grade" brand. This brand is now known and demanded not only all over the United States, but the association is receiving orders from foreign ports, especially from Japan, which is calling for more shingles than can be shipped. This could not have been brought about without co-operation.

The publicity bureau of the association was instituted for the purpose of getting information about the manufacturers and their products to the public accurately. In this way there has been no slurring over important features of news or misinformation printed in the newspapers.

In summing up the work of the West Coast Lumbermen's Association, Mr. Bloedel said that two years ago one of the presidents of the association found that $1,800 a month was not enough money for the activities of the association, and accordingly he proceeded to spend what he had wisely and to try for more and at the present time the association income has been raised to an average of over $4,000 a month, or about $50,000 a year. This was not done by increasing dues, but by getting additional support and enlisting new recruits. He said: "At the meeting at Tacoma and at another one held in Seattle, the sentiment seemed crystallized that we should make an effort to raise more funds. The average dues raised by the West Coast Lumbermen's Association have been about 1½ cents a thousand feet and that has produced $4,000 a month or $50,000 a year. The sentiment was that we ought to raise the dues to 5 cents a thousand feet, or approximately three times what we are paying now. That would give us nearly $200,000 a year and it is a pittance when you bear in mind the vastness of this business. This $200,000 would be raised and used first, for the purpose of continuing the activities of the association, and secondly, to express proper appreciation of the spirit of the gentlemen who have come here at a sacrifice of their own time and money to explain to us the conditions of the whole industry.

"These gentlemen should be supported in their efforts to extend the limits of the trade market and make it national and international. Just stop and figure a few minutes. What is $200,000 when spread out over an industry of this vastness? In the two states are produced something over six billion feet of lumber in normal times and its value runs from $75,000,000 to $85,000,000. Shingles add $15,000,000 to this and by-products are worth $10,000,000 or $15,000,000 more and then there are the pilings, which make the whole lumber value produced annually somewhere around $180,000,000. Now, what is $175,000 a year to support and maintain and develop such an industry as that? What is it when a matter of even $100,000,000 is involved?

"You cannot afford not to have the assistance of the West Coast Lumbermen's Association or the National association and they cannot afford not to have you co-operating with all who are interested in lumber in any way." (Applause.)

Major Everett G. Griggs, of Tacoma, Wash., made a very fine talk, during which he referred to the excellent work done by the Pacific coast associations, and also made some important references to politics.

Reception to Downman Party in San Francisco

Reference was made in a telegram filed in San Francisco November 23, and printed in the LUMBER WORLD REVIEW of November 25, to a reception given to R. H. Downman and party in San Francisco upon that day. A brief account of the DETAILS of that happening follows:

It was a mass meeting of lumbermen that convened in the ballroom of the Palace hotel at San Francisco, representative of ALL BRANCHES of the lumber trade of California, manufacturers, retailers, wholesalers, ship owners, barrel manufacturers, bankers, and timber land owners. One hundred and seventy-eight people sat down to luncheon in the Palace hotel that day.

A great red, white and blue shield hung above the presiding officer's head, which contained the new slogan of the National Lumber Manufacturers' Association, done with wooden blocks, and reading "There Is a Wood for Every Need"—designed by A. B. Wastell. Mr. Wastell also had the table decorated with wooden houses and various diminutive wooden buildings manufactured of redwood and California sugar pine and white pine, done by the Art Toy Co., of San Francisco.

Captain Selfridge, of San Francisco, at the close of the luncheon, welcomed the guests, saying:

"Gentlemen, this is a gathering of lumber manufacturers, wholesalers, carriers and retailers, to hear a MESSAGE, or rather a GOSPEL of more intense co-operation, as not only PREACHED but as PRACTICED by the bearers of this message. They have traveled many miles and spent many hours in preaching this gospel elsewhere; and, headed by R. H. Downman, president of the National Lumber Manufacturers' Association, they are here today. It is my great pleasure to introduce to you F. J. Koster, president of the San Francisco Chamber of Commerce, who will welcome them for you."

SAN FRANCISCO SPEAKER CAPTURES HEARTS OF LUMRERMEN.

It is not often that the welcoming speeches of mayors who present the keys of cities—and civic unction to visiting commercial bodies to those cities—mean anything or are worth a line of type. The address of Mr. Koster was for its brevity, its incisive logic and its pure diction a remarkable speech and it is printed in full:

"I welcome this opportunity to join with you in extending sincerest greetings to these guests. The San Francisco Chamber of Commerce particularly, should have the privilege of extending to them that welcome; the San Francisco Chamber of Commerce today—perhaps more than ever before—represents the co-operative spirit of the best element in the city of San Francisco.

"I do not say that in any spirit of egotism, but rather in one of appreciation. Furthermore, the lumber and allied industries being one of the most important elements in the wealth of our state and of our coast, therefore, the CONDUCT of those industries, the WELFARE of those industries is an important factor in the prosperity of this western metropolis.

"The San Francisco Chamber of Commerce, in its articles of incorporation, states that its object is to further the welfare, public and commercial, of the city of San Francisco, of the state of California, and of the Pacific coast, therefore, it should take very deep concern in the progress of the lumber industry, lumber being, as I have said, so important an element in the wealth of the Pacific coast.

"You are to be addressed upon this subject of co-operation by leaders in your industry! I sometimes wonder if the rank and file know what it means to TAKE leadership in any such co-operative effort. I wonder if you often fully appreciate that on the part of such a leader it means, first, that he has got to give his share, and, usually more than his share of money, more than his share of time, and a whole lot of his heart and his energy to carry forward a cause in which he, perhaps, is a very minor beneficiary.

"I am happy, therefore, in having this privilege of saying these things to you before you attend the addresses of such men as Mr. Downman. I have not had the privilege of meeting him until a very short time ago. Captain Selfridge has been good enough to say a few words to me concerning the work that he is doing.

"Gentlemen, I believe that in addition to doing our best—each in his own particular sphere—it is absolutely essential that we get together and give a PART of our time and as MUCH of our money as we can spare towards the common cause, and that every man of us must consider it part of his own particular PERSONAL DUTY.

"Now, we have in this country today conditions which are, to say the least, somewhat discouraging. We can only counteract those influences by getting together and giving a personal service in our organizations to counteract those influences. It is a part of our business that we cannot get away from. Business today, to be successful, must be scientifically constructed. That means that we must consider every influence that in any way at all bears upon our business and its success; it means that we have got to fight adverse legislation; we have got to stimulate desirable legislation; we have got to see that there are decent, right-minded public servants in office; we have also got to co-operate upon those things that are necessary to present our entire scheme in its most favorable light all over our country and all over the world. Particularly is this true of us who are in wood work and to the timber owners and to the barrel manufacturers. I said to Mr. Downman that I do not know of any other line of business in which we, as a class, have been such rank quitters in everything that has confronted us in the way of a competitor in the nature of some other material. Therefore, when I ask you to join in these organizations, to give your own time, give your money, it is not at all altruistic; it seems to me it simply is good, sensible business.

"We of the Pacific coast are the custodians—I believe I am right in saying—of the greatest timber wealth that remains upon the face of the earth today. Let us be Californians, westerners with a big western spirit, and let us do our share towards making most of that wealth, not only for the immediate present, but to conserve it properly for posterity in the way that we handle each his particular share of this business.

"I wish again to say that it affords me a very great privilege to be here with you, and to extend the welcome of the San Francisco Chamber of Commerce to these guests."

Capt. E. A. Selfridge, Jr.: "The pioneer of this movement—which began some years ago in Louisiana and which has grown to such great proportions at the present—is a gentleman who is broad-minded enough, and at the same time charitable enough, also at the same time with sufficient common sense to realize that as long as he holds the stick he does not care who comes under the umbrella. This message may be said to have been brought to us by what has been frequently termed the 'Umbrella Squad.' The chief of this squad is R. H. Downman, a large cypress manufacturer and president of the National Lumber Manufacturers' Association, whom I take great pleasure in introducing."

MR. DOWNMAN RESPONDS TO FLATTERING INTRODUCTION.

In replying to Captain Selfridge's flattering introduction Mr. Downman said that the party had not always been referred to as the "Umbrella Squad." When in Spokane they were spoken of as the "Billy Sunday Squad." Mr. Downman hardly thought the comparison appropriate. Billy Sunday WORKED FOR MONEY and GOT IT! Mr. Downman said that C. R. Johnson had complimented

Digitized by Google

him with the statement that he was the man who had put the "C" in co-operation, and that while that might be true, he wanted the lumbermen of the United States to be the men who put the letter "C" in cash. He doubted if co-operation in lumber circles began in Louisiana, but the cypress people had stabilized the selling value of their product at $22.50 a thousand for the last seven years by forceful advertising, and he thought that the service would have been cheap—really—at a dollar a thousand—and he would willingly have put up that amount of money personally.

Mr. Downman said further:

"Mr. Koster referred to his conversation with me to the fact that most people did not know what a barrel was. The barrel is one of the earliest articles manufactured by human beings, and, in fact, it was the earliest, except the wheel; yet the people in the barrel manufacturing business do not let the public know that. I made a statement in Portland the other night that as little as we think about it, about 80 percent of the people in the United States never heard of Douglas fir. A gentleman in the audience took exception to that, and said that was not true, because it was referred to in Holy Writ, where it tells of the man who built his house of cedar and fir. That did not prove anything to ME, because 85 percent of the people do not read the Bible!

"The spirit of co-operation should not only exist between lumbermen, but it should exist between lumbermen and other citizens of the United States and the government. As Mr. Koster has said, it is our duty to co-operate and get a good government and co-operate with it after you have that government. You only deserve the government that you elect.

"I have a paper prepared, and unless I have got it before me I am up a tree, and do not know what to say, and as my friend, Bolling Arthur Johnson, says, when I get mad I can make 'a hell of a speech,' but I am not mad yet. With thanks for your very kind welcome—which is the second one I have received in this great Golden Gate city—I will close my remarks and continue them at the general meeting."

FEATURES OF MR. DOWNMAN'S FORMAL ADDRESS AT SAN FRANCISCO.

After an adjournment of ten minutes the luncheon party assembled in the other end of the room, and, Captain Selfridge presiding, announced that the addresses that would be delivered would be done by men who had given a great deal of time and throught to the work. He invited those present to shoot the ideas of the visitors full of holes

SLOGAN OF THE NATIONAL LUMBER MANUFACTURERS ASSOCIATION.

if possible, but in the event of being successful in that that those who did the shooting should furnish something to plug the holes up with afterwards.

Mr. Downman outlined the work of the National association as he had previously done in several cities, and then diverted to a recent activity that had been thrust upon the association by the meeting of the lumbermen and the Forest Service, Department of Foreign and Domestic Commerce and Federal Trade Commission, who at a conference held in Chicago, August 21, to promote the proposition of sending five "Trade Commissioners" abroad to study the foreign requirements in lumber in Europe, and how he had endeavored to raise this money by a personally signed circular letter to 800 people, with the hope of raising the money, but to which he only had thirty satisfactory replies.

He told a very interesting story about the National Lumber Manufacturers' Association having been appealed to in the car shortage trouble and asked to interest the Interstate Commerce Commission in the difficulty, which had actually resulted in a call for a general hearing on the subject, much to the credit of the lumbermen in interest. The National Lumber Manufacturers' Association had come to be credited with an honesty of purpose by the government. That thing alone was worth all that the National Lumber Manufacturers' Association had ever cost the people who eked out the small amount of money to support it.

He referred to the old "car stake" case, where the lumbermen had gone before the Interstate Commrce Commission with a perfectly good case, but those interests could not get the money to prosecute the affair, consequently the commission never got the facts, and, the railroads, ever alert and on the job, snowed the lumbermen under.

He urged a cutting down of the production of lumber on the Pacific coast, and said he had been in one sawmill in the state of Washington which wasted each year more lumber than all of his cypress sawmills produced.

Referring to the export trade and the necessity for co-operation of all exporters in the large companies to handle that trade, he announced his belief that if the Webb bill is not amended to any great extent by the senate at the short session of congress convening in December, that it will be passed without question.

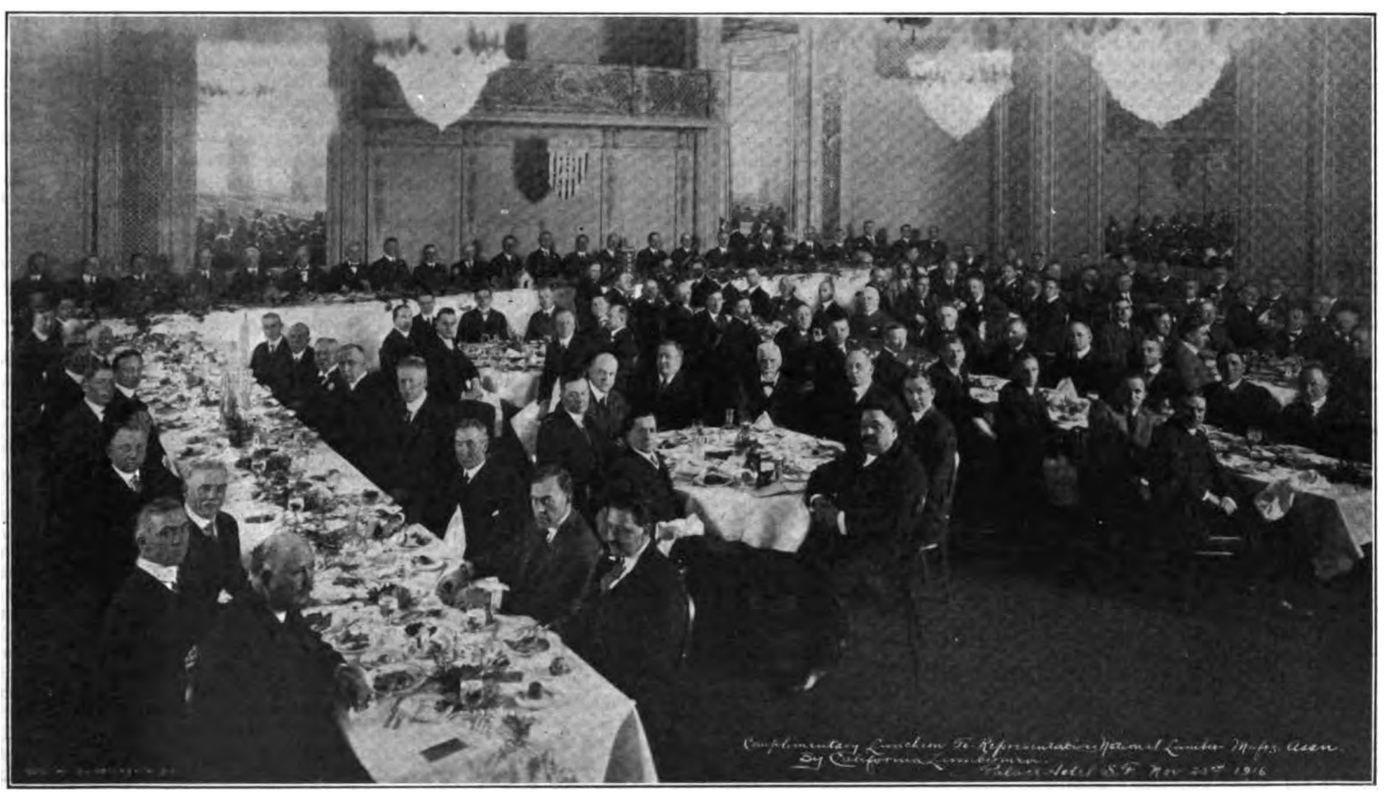
He referred to the Inter-Insurance Exchange of the National association, and said that it had started about a year ago with about thirty-five subscribers and $675,000 at risk, and that today the exchange was carrying about $8,500,000 on selected plants.

He fully discussed the Trade Extension department and recounted its activities and necessities.

Concerning the revision of building codes in many cities he said he hoped that no particular branch of the trade like the "Rite-Grade" shingle people of Washington, would undertake to appear before the various councils of the cities which are changing their codes, but would let the National Lumber Manufacturers' Association do that—it being fitted to do that sort of work IMPERSONALLY, and, therefore, more EFFECTIVELY.

Mr. Downman paid his respects to the "substitutes" and showed that, when the lumbermen got busy, they had an ability to create more interesting shows in the building exhibits which were being held all over the country than any substitute for lumber had done or could DO; but the lumbermen must have money, in order to institute investigations in a scientific way that they might meet the scientifically managed substitute prosposition.

He thought the retail dealers were co-operating more fully than they had in the past, but that really all the National Lumber Manufacturers'



LUMBER CLANS OF CALIFORNIA BREAKING BREAD TOGETHER IN THE PALACE HOTEL, SAN FRANCISCO.

Digitized by Google

sociation needed was money with which to accomplish all its ends.

MR. TURNBULL TELLS OF NORTH CAROLINA PINE PROTECTION.

Following Mr. Downman's talk A. R. Turnbull made one of the best talks of the series.

His first view of the National Lumber Manufacturers' Association slogan, coupled with the imminent possibility that he would have to make a speech that day, had led him to paraphrase the slogan, or rather to turn it about so that it would read: "There is a WORD for every need," rather than "There is a WOOD for every need." It was a rather whimsical thought, perhaps, but there really is a word which should mean to the lumbermen more than all the words in the Bible, even, and that word is "co-operation."

He told the story of the North Carolina Pine Association, which has been previously printed in these memoirs of the trip. He had not come along with this aggregation as a spellbinder, but he was glad that he had assisted in bringing along a message of good cheer, for the trip had been to him also a message of good cheer, as he had ascertained that "instead of our holding the umbrella for you, you will have to hold the umbrella for yourselves. If anyone needs co-operation you need it."

When he had first gone into the south to take hold of a plant there he found lack of harmony among all the departments. The logging department, the sawmill and the yards, were just as much apart as if they did not belong to the same firm. The woodsmen would not do 5 cents worth more work on a log if it saved the millman 50 cents. He thought that same thought applied to their associations. You do not gain anything by hampering the other man.

He said if the lumbermen of the west expected to make a profit by the diminution of the lumber products of the east, many of the western lumbermen would be taken care of by the undertakers before that happened; that Maine alone produces 1,000,000,000 feet of lumber a year. The association which he represented covers a territory in which they are cutting annually 2,500,000,000 feet of pine alone, and that was where—as a matter of fact—lumbering first began in America.

Mr. Turnbull threw his consternation boom when he told the Californians that he had recently purchased a very considerable body of timber of a man who—as a boy—had ploughed corn on that same land, and that the marks of the corn rows were yet visible, and yet he was getting 25,000 feet of lumber per acre from that land at the present time, and that he would get more profit out of those trees than the Californians would get out of theirs. Furthermore, he could market his lumber on a freight rate of from $1 to $3 a thousand and make the lumber with negro labor where the carriage riders only demanded $2.25 to $2.50 a day.

He urged, above all other things, that the lumbermen of the coast should have the direct handling of their inspection bureaus, and should have the exclusive service of an inspection bureau working only for the association, and not doing outside work.

Following Mr. Turnbull's address, R. B. Goodman delivered a similar address to the one he had first delivered in Spokane, and which was printed in our issue of November 25.

H. D. LANGILLE EXPLAINS FEDERATION PLANS.

H. D. Langille was called upon, and explained very succinctly his admirable plan for a Forest Production Federation, which was listened to with great attention.

Following Mr. Langille's talk Mr. Downman said that if the National association was a top heavy thing in regard to its organization, it was probably top heavy because its anchor was not sufficient, and that the anchor was the everlasting lack of money that he had referred to once or twice before; however, if there was anything the matter with the organization which produced that brand of apathy which made it possible for the semi-annual meting of stockholders to be called, and result in only one man showing up, as had occurred last January, he for ONE stood willing to make any repairs to the old boat which would make it draw more water and move with more alacrity.

FORESTER ALLEN ON WORK ACCOMPLISHED.

E. T. Allen, of Portland, was introduced, and recounted what had been accomplished by the committee on its trip from Spokane to San Francisco.

He spoke specifically for the timber owners, 4,000 in number, covering in their holdings 15,000,000 acres of land. The timber owners realized that a market for lumber is necessary, if there is to be a market for their trees, and he believed they would contribute to the trade extension work of the manufacturers; that while the timber owners were not quite ready to give up their identity or to go quite so far immediately, as the Langille plan proposes, the timber owners' organizations seemed ready to contribute some money towards market extension, and certainly to federate or co-operate in any reasonable way.

Although Mr. Allen did not speak officially for the Western Pine and West Coast lumbermen's associations he bore witness to the fact that they had each in open meeting given out that it was the sense of those meetings that their contributions to the National association should in the future be not less than 1½ cents a thousand on their production; and that Messrs. Downman, Keith, Goodman and Turnbull had pledged their personal endeavors to see that their associations would follow suit in like amount.

On motion of C. R. Johnson a committee was authorized to consider the matter for the Redwood Lumber Manufacturers' Association; and, on motion of R. J. Thorson, a like committee was authorized to be appointed to act for the California Sugar and White Pine Association. These committees were to be appointed later.

A vote of thanks was extended to Mr. Downman and his committee. The meeting adjourned.

THE VISIT OF THE WISE MEN OF THE EAST.

San Francisco, Cal., Dec. 2.—The visit of the "Wise Men from the East," the Downman party, is over, but the effect of the message of co-operative good will which they brought will be far-reaching. The time of this conference was particularly timely as a climax of approval and encouragement to several newly formed associations. Of these the California Redwood Association was organized last spring and is gradually catching its stride in trade extension and statistical information, under Secretary E. E. Myers and President E. A. Selfridge, while A. Larsson, traffic manager, has been active in general freight rate and claim adjustments and specific presentations before the Interstate Commerce Commission. This association has been supporting the National on the old basis of $2 per million of production but as a result of the appeal by the National missionaries, will doubtless decide to increase to 1½ cents a thousand.

It is also expected that several companies of redwood manufacturers not previously affiliated with the association have become inoculated with the spirit of co-operation that was apparent at luncheon, conference and committee meetings. This effect is also expected among some of those who have stood out among the white pine manufacturers from joining the California White & Sugar Pine Association for sundry reasons. This association has made excellent progress since organizing last summer with Harold Mortenson of Klamath Falls as president and E. A. Blocklinger as secretary. The bureau of grades has been well established, information and statistics are compiled and distributed and a new feeling of confidence has been created among all white pine manufacturers, even those who have not yet joined the association. This was exemplified at the quarterly meeting and banquet held at the Palace Hotel, Friday evening, November 17, when good reports and ambitious plans were discussed by members and non-member invited guests. Committees were appointed on freight rate adjustments and statistical reports, after general discussion. On the former are E. H. Cox of the Weed Lumber Co., C. R. Wisdom of the Red River Lumber Co. and A. M. Mortensen of the Fruit Growers Supply Co. On the statistics are M. H. Grover of the Fruit Growers' Supply Co., F. O. McGavic of McCloud River Lumber Co., and C. R. Wisdom of Red River Lumber Co. The experiment of holding a banquet in connection with business meetings was considered a success and will doubtless be continued. Definite action on signing up a contract with the National Lumber Manufacturers' Association will come up at the directors' meeting on Dec. 15.

A somewhat unique feature of the San Francisco conference was the interested participation of the retail lumbermen. Matthew A. Harris of the Van Arsdale-Harris Lumber Co. was on the committee of arrangements and as he is president of the San Francisco Retail Lumber Yards, another new association, he stimulated a big attendance of local retailers here and also of the East Bay district. His purpose was for them to catch the enthusiasm of the visitors and also to impress the manufacturers that the retailers are ready to help in lumber trade extension, that they are primarily lumbermen and not "building material merchants" and that they want co-operation of manufacturers in correcting trade abuses, such as manufacturers selling to any irresponsible scalper or curbstone broker. This association of retailers is formed along ethical lines and ideals to better the trade and promote reciprocal relations between manufacturer and retailer.

Another new organization represented at the conference was the Douglas Fir Exploitation and Export Co., by its general manager, A. A. Baxter, and president, W. H. Talbot. This company has only been active since November 1 and has had remarkable success in booking to date thirty million feet of fir for export. This company is operating as a clearing house for the fir mills, most of which have joined, and deals with the established exporters who have offices in San Francisco as a unit, making for stable prices and fair distribution of orders, and has been well received by the exporters, who first were somewhat quizzical as to its purpose and scope, fearing it might prove a rival. Finding that the company was not putting out foreign representatives except to exploit and extend the use of fir lumber abroad by campaigns of education and not direct selling, they took kindly to the idea of dealing with one medium instead of many and, too, have the advantage of dealing with a man who is familiar with every detail of the export game.

This operation therefore is very similar to the Redwood Export Co. plan which has been successfully carried out for several years as referred to in a separate article.

In the domestic fir trade the vital local organization is the Douglas Fir Club, which holds meetings every two weeks in connection with a luncheon at the San Francisco Commercial Club. These meetings are well attended, eligibles are the direct representatives, whether salaried or commission, of Douglas Fir Mills and most of the mills having representatives here are members. At the last meeting A. A. Baxter, formerly of the Chas. Nelson Co., withdrew from the presidency, on account of going into the export trade, and Vice-President C. R. McCormick became president, and R. O. Wilson of the Fyfe-Wilson Lumber Co. was elected to the vacancy on the board of directors. F. V. Paramino of the Robert Dollar Co. is the secretary. As a token of appreciation the retiring president, A. A. Baxter, was elected an honorary member of the club. Reports that the fir mills had raised their prices in the rail trade $1 a thousand encouraged those present to continue a stable cargo price of $14.50, base at San Francisco and $15.50 in southern California, the difference representing increased boat charter rate south. Reports showed the car shortage becoming more serious, while putting new boats into service had not affected boat shortage, as boats are constantly being withdrawn to haul other commodities to Mexico and the west coast of South America, and many larger coasters to the Atlantic seaboard.

Reports from the redwood mills show an advance of $1 a thousand all along the line of clear and common grades, effective December 1, making the discounts off the list $5 on clears and $7 on commons. It is considered that although cars are not obtainable to suit the need, that there is good business sense in getting fair value on such as is booked and that buyers are able to stand the advance as country trade is looking up and prompt delivery should pay a premium.

All signs point to the establishment of a redwood selling company or sales agency in the California trade to handle exploitation and selling in the home territory, through co-operation of several mills to reduce overhead expense.

It is thus evidenced that San Francisco lumbermen are well organized as to species and that they consider great value attaches to the impetus given co-operative endeavor by the gospel of good will preached last week. In reference to the chief apostle, of whom C. R. Johnson, president of the Union Lumber Co., said at the luncheon-meeting preceding the formal conference: "Downman, you are certainly the man who put the C in Co-operation," and Mr. Downman quickly retorted, "I want you all to be the men who put the C in Cash."

NORTHERN CEDAR OPERATORS.

The annual meeting of the Northern White Cedar Association, it is announced by Secretary N. E. Boucher, will be held at the Radisson Hotel, Minneapolis, Minn., Tuesday and Wednesday, January 30 and 31. As customary in the past, no fixed program has been arranged, but important matters relative to conditions in the white cedar business will be brought up in regular order.

January 18-19—American Forestry Association, Willard Hotel, Washington, D. C. Annual meeting.
January 20—Gum Lumber Manufacturers' Association, Memphis, Tenn. Annual meeting.
January 23-24—Retail Lumber Dealers' Association of Indiana, Claypool Hotel, Indianapolis, Ind. Annual meeting.
Januuary 23-24-25—Mountain States Lumber Dealers' Association, Brown Palace Hotel, Denver, Colo. Annual meeting.
January 23-25—Empire State Association of Wholesale Lumber & Sash & Door Salesmen of the State of New York, Onondaga Hotel, Syracuse, N. Y. Annual meeting.
January 24—National Lumber Exporters' Association, Pittsburgh, Pa. Annual meeting.
January 24-25—Retail Lumber Dealers' Association of the State of New York, Onondaga Hotel, Syracuse, N. Y. Annual meeting.
January 24-25—North Carolina Forestry Association, Raleigh, N. Car. Annual Meeting.
January 24-26—Western Retail Lumbermen's Association, (Canadian) Winnipeg, Man. Annual meeting.
January 24-26—Ohio Association of Retail Lumber Dealers, Deshler Hotel, Columbus, Ohio. Annual meeting.
January 24-26, 1917—Southwestern Lumbermen's Association, Muehlebach Hotel, Kansas City, Mo. Annual Meeting.
January 25-26—Northern Hemlock & Hardwood Manufacturers' Association, Hotel Pfister, Milwaukee, Wis. Annual meeting.
January 30-31—Hardwood Manufacturers Association of the United States, Hotel Sinton, Cincinnati, Ohio. Annual meeting.
January 30-31—Northern White Cedar Association, Hotel Radisson, Minneapolis, Minn. Annual meeting.
January 31-February 1-2—Chamber of Commerce of the United States of America, New Willard Hotel, Washington, D. C. Annual meeting.
February 7-8—Retail Lumber Dealers' Association of Pennsylvania, Fort Pitt Hotel, Pittsburgh, Pa. Annual meeting.
February 7-8-9—Nebraska Lumber Dealers' Association, Hotel Rome, Omaha, Neb. Annual meeting.
February 7-9—National Association of Box Manufacturers, Hotel LaSalle, Chicago, Ill. Annual meeting.
February 11-12—National Builders' Supply Association, Hotel Sherman, Chicago, Ill. Annual meeting.
February 14-16—Western Retail Lumbermens' Association, Hotel Davenport, Spokane, Wash. Annual meeting.
February 14-16—Illinois Lumber & Builders' Supply Dealers' Association, Hotel Sherman, Chicago. Annual meeting.
February 20—Lumber Dealers' Association of Connecticut, Hotel Taft, New Haven. Annnual meeting.
February 20-22—Wisconsin Retail Lumber Dealers' Association, Hotel Pfister, Milwaukee, Wis. Annual meeting.
April 10—Lumbermen's Association of Texas, Galveston, Texas. Annual meeting.

SOUTHWESTERN HARDWOOD TRAFFIC ASSOCIATION.

Little Rock, Ark., Dec. 7.—At a meeting held in the Marion Hotel of Little Rock last week about thirty hardwood manufacturers of the state formed themselves into what is known as the Southwestern Hardwood Traffic Association. This organization will be affiliated with the Southern Hardwood Traffic Association, which has its offices in Memphis, but will be operated separately so far as financial support is concerned. J. H. Townshend, who has had charge of the Southern association, will also serve as secretary of the new association. An office will be opened in Little Rock some time during this month. The directors of the new organization plan a meeting in Little Rock on the 9th instant to perfect all arrangements for opening the association's office. The officers of the new organization, in addition to the secretary, are: H. W. Coles of the Arkansas Oak Flooring Co., Pine Bluff, president; D. S. Watrous of the Little Rock Lumber & Manufacturing Co., Little Rock, vice-president; and Ray McIntyre of J. F. McIntyre & Sons, Pine Bluff, treasurer. The directors are: Frank Fee of the Fee-Crayton Hardwood Lumber Co., Dermott; H. W. Gregory of the Bliss-Cook Oak Co., Blissville; J. R. Hamlin of the J. H. Hamlin & Sons, Little Rock; C. H. Murphy of the Saline River Hardwood Lumber Co., Pine Bluff; and W. H. Wheeler of the Norton-Wheeler Stave Co., Pine Bluff.

It is expected that the membership of the association will be increased to approximately 150, as the organization is open for membership by all manufacturers of hardwood lumber, including manufacturers of staves, heading, etc.

MEMPHIS LUMBERMEN'S CLUB.

Memphis, Tenn., Dec. 5,—Announcement will be made of candidates for office in the Lumbermen's Club of Memphis for the ensuing year at the regular semi-monthly meeting to be held at the Hotel Gayoso Saturday, Dec. 9. The election itself will be held Dec. 16.

Pres. Nickey, at the meeting held Saturday, Nov. 25, appointed the two nominating committees as follows:

Number 1—John M. Pritchard, secretary Gum Lumber Manufacturers' Association, chairman, G. E. Beckendorf and E. L. McLallen.

Number 2—F. W. Dugan, F. W. Dugan Lumber Co., chairman, Walter Holgrafe and Bart C. Tully.

Between Dec. 9 and Dec. 16 electioneering will be the order of the day, but it will be conducted in the same friendly spirit which has characterised such efforts on the part of candidates and their friends for a number of years. As a matter of fact, the lumbermen are brought closer together through these election campaigns and a spirit of loyalty and friendliness is developed which always results in very great good to this organization. There is no doubt that the nominating committees will select able candidates for the various offices and that, whoever may be elected, the affairs of the club will be in exceptionally strong hands.

J. H. Townshend, secretary-manager of the Southern Hardwood Traffic Association was present at this meeting and gave a report of his recent trip to Washington. While there he attended a meeting of the national council of the Chamber of Commerce of the United States, which is planning to send out a referendum on several subjects, including the proposed enlargement of the Interstate Commerce Commission, the proposed plan to give the commission sole power in the regulation of freight rates, and the proposed law to divert all railroad taxes to the federal treasury.

Henry J. Davis of Henry J. Davis & Co., Clarksdale, Miss., and Chas. P. McManus, resident manager of the Probst Lumber Co., Cincinnati, were elected active members.

On motion of H. B. Weiss, chairman of the membership committee, Earl Palmer, who recently removed to Memphis from Paducah, Ky., was elected an active instead of associate member.

OAK MANUFACTURERS PLAN AN ACTIVE CAMPAIGN.

Memphis, Tenn., Dec. 4.—At the meeting of the executive committee of the American Oak Manufacturers' Association, held here Saturday, November 25, plans were laid for a big advertising campaign in behalf of oak lumber to be undertaken as soon as the secretary, Benjamin Aiken, of New York, arrives to take up his active duties. This publicity campaign is expected to prove one of the principal activities of the new organization and those who have become identified with this association and who have seen the accomplishments of publicity work in behalf of other woods are positive that a decided impetus will be given to the demand for oak when the campaign has been fairly gotten under way.

It was likewise decided at this meeting that the first annual meeting of the American Oak Manufacturers' Association should be held here, January 19. Following this decision on the part of the committee, it was announced that the Southern Hardwood Traffic Association would hold its annual meeting January 18. It has already been announced that the Gum Lumber Manufacturers' Association will hold its annual meeting January 20. It will be seen from the foregoing that these three organizations will meet on three successive days and this arrangement has been worked out because of the interlocking of members in the three associations, many of those identified with one being identified likewise with one or more of the others.

It was also decided that these three associations should co-operate in a plan looking to the placing of the offices of each on the same floor of one of the big down-town buildings in order that members having to transact business with more than one of them might do so with as little inconvenience as possible. This is another plan growing out of the interlocking of memberships in these three organizations.

The membership committee made a very favorable report at this meeting, showing that about a dozen new firms had enrolled since the organization of the association on November 10. This committee is proving particularly active and it is meeting with much encouragement in its efforts to increase the membership. The association idea is gaining a big hold on all branches of the lumber trade and this of itself helps those who are seeking to enroll members in the American Oak Manufacturers' Association.

James E. Starke said that he and other members of the executive committee desired to impress upon all oak manufacturers the fact that Mr. Aiken is a lumberman first of all and that as such he is amply qualified to fill the position to which he has been elected. But they want to go a step further and impress upon all members, actual and prospective, the increased qualifications for the position possessed by Mr. Aiken because of the wide experience he has had in advertising since he is thus rendered a publicity expert of the first water.

All members of the executive committee were present with the exception of F. R. Gadd, of Chicago.

Northwestern Hardwood Lumbermen's Association

Minneapolis, Minn., Dec. 6.—The Northwestern Hardwood Lumbermen's Association held its twenty-ninth annual meeting here yesterday at the West hotel, followed by a banquet served in the Colonial room to a group of sixty hardwood lumbermen and their invited guests. The business session was of great interest, and presaged a spirit of progress that is expected to make the association a larger factor in the trade. The economic importance of the jobber was emphasized.

Election of officers for the ensuing year resulted as follows:

President, P. M. Parker; vice-president, Payson Smith; secretary, J. F. Hayden; treasurer, F. H. Lewis.

Standing committees: Arbitration, T. T. Jones, N. C. Bennett, Harry P. Sutton, J. M. Okoneski and P. M. Bartelme.

Membership, D. F. Clark, H. Booraem and D. R. Stanton.

The meeting was called to order by President T. T. Jones. Secretary J. F. Hayden read the minutes of the last annual meeting, which were approved. The W. L. Joyce Lumber Co. and the Robert Duncan Lumber Co. were voted in as new members. Two members had dropped out in the year, D. F. Clark said, in reporting for the membership committee.

President Jones, in his annual address, spoke of the future of the hardwood jobber. He pointed out that the jobber is the expert salesman and student of the hardwood lumber business, and declared that elimination of so important a factor would be a mistake. There has been some talk, he said, on the part of some manufacturers to sell direct from mills, but he looked upon this as a grave mistake. "It is impossible for the hardwood lumber business to exist without the jobber," said President Jones. "It would be like expecting a business to get along without a sales manager. Take the expert out of any line of business and you would remove the element that makes for the success of that business." He spoke briefly of changes in the rules, and said that any changes for the good of the industry should be welcomed by wholesalers, jobbers and retailers.

A. F. Wrbsky reported for the railroad committee, detailing changes in rates put into effect in the year. He also touched upon the proposed rule of the Interstate Commerce Commission to increase demurrage charges.

Several members discussed the demurrage feature. D. F. Clark, as a member of the traffic committee of the National Hardwood Lumber Association, said he was eager to get the consensus of opinion.

H. Booraem said he believed higher demurrage charges would hasten lumbermen in general, but he felt it a duty of the railroads to provide cars. A higher rate should not be imposed, he said, if other remedies are at hand.

J. M. Okoneski opposed increased demurrage charges, stating that present conditions are abnormal, and rules should not be changed now lest they become permanent.

Payson Smith said he believed the federal authorities can correct the present evils if shippers do not use freight cars for warehouse purposes.

President Jones said that if demurrage rates are raised it would cut down, if not wipe out, the jobbers' present narrow margin of profit.

Secretary J. F. Hayden explained how he had obtained prices from members last year and made an average price, which he submitted to reporting members. He asked if it was planned to continue the practice this year. P. M. Parker moved that the same method be continued in force. D. F. Clark moved to amend by having a committee of five members fix a price list, which would be published and given circulation. President Jones opposed the idea of a published list. Mr. Clark said he would not be too insistent, but thought his idea would work out to the general benefit of all. F. H. Lewis thought a published list would tend to raise the demands of mill men in selling to the Twin City wholesalers. After considerable discussion the association voted to continue the price list the same as last year.

"The Hardwood Business, Past, Present and Future," was the subject of an interesting address by Payson Smith. He reviewed briefly the battle over the rules, stating that manufacturers are bitter in some instances against jobbers who refuse to accept the changes urged. He said he would consider it a calamity should the manufacturers withdraw and set up a separate association, for such action would lead to conflicting interests. He declared that co-operation is still much needed in the lumber business, a business, he said that has to date obtained the smallest compensation for money and effort involved than any other industry in the country. "The jobber is a good customer, so long as he uses for his slogan: 'Uniform Prices, Straight Grades and Service,'" said Mr. Smith. "The jobber is able to give the retailer that personal service which the distant mill is not prepared to give. So long as the jobber is fair to the manufacturers, himself and the dealer, there need be no talk of the direct selling of hardwood lumber."

J. M. Okoneski told of the grade changes proposed by the Wisconsin manufacturers. He thought that they would be bad for the jobber, but should be favorable to the large manufacturer and the yard trade. He said the proposed changes were at least workable, but at best would make some disturbance in values.

H. Booraem said that Twin City jobbers have a hard time to convince buyers that all grades of Minnesota hardwood lumber are not bad. He said it must be admitted that some of the native product is not high class. He urged that goods be labeled and sold for just what they are, and that the trade in general would be bettered by such rules of conduct.

A vote of thanks was extended to the retiring president, and the new president, P. M. Parker, was introduced. He thanked the members for the honor, and said he will work for real co-operation.

The banquet, in which vaudeville acts were liberally sprinkled, closed the convention. It was a banquet without a toastmaster or after-dinner speakers, and was all the more enjoyable on that account.

SOUTHERN PINE BAROMETER.

The weekly trade barometer of the Southern Pine Association for the week ended Friday, December 1, was sent out to the trade December 4. The compilation made from reports received from 154 mills was as follows:

	Cars	Feet
Orders on hand	29,806	631,052,632
Orders received during week	3,768	79,776,096
Total	33,574	710,828,728
Shipments during week	4,016	85,026,752
Balance orders on hand	29,558	625,801,976

The figures indicate a considerable improvement in the shipments, doubtless through the availability of a larger number of cars. There is an increase of about 11 percent over the shipments of the previous week and they recorded the heaviest shipments of any week from these mills since the week ended September 22. Orders show a falling off from the previous week, being the smallest of any week, with one exception, since September 1. The barometer shows that orders are below production for the week ended September 8 by 5,212,532 feet and that shipments exceeded the production by only 38,124 feet or four-tenths of 1 percent and it is the first time in any week since September 15 that the shipments have exceeded the production. The figures of the average orders, the average shipments per mill and the total unfilled orders in carloads from October 1 to December 1, are as follows:

	Mills reporting	Average orders, feet	Average shipments, feet	Total unfilled cars
Oct. 6	160	514,549	435,300	24,409
Oct. 13	152	636,911	509,140	26,196
Oct. 20	157	524,657	477,058	26,978
Oct. 27	159	524,696	521,244	27,304
Nov. 3	151	639,032	528,589	27,368
Nov. 10	160	569,178	491,203	27,994
Nov. 17	153	607,119	507,436	29,162
Nov. 24	154	615,638	495,892	30,085
Dec. 1	154	518,027	552,122	29,558

OWNERS OF CUT-OVER LANDS IN THE SOUTH TO FORM ORGANIZATION.

Memphis, Tenn., Dec. 4.—A meeting will be held here December 16 by owners of cut-over lands in the Mississippi delta to perfect an organization which will advertise these lands through a nation-wide publicity campaign and which will put forth every possible effort to attract immigration to what is regarded by them as the richest undeveloped section of the world. The area to be embraced in the membership of the association will extend from Cape Girardeau, Mo., and Cairo, Ill., on the north, to the extreme southern limit of the hardwood producing territory and will cover alluvial portions of the states of Missouri, Arkansas, Mississippi, Tennessee and Louisiana.

Jno. W. McClure, chairman of the organization committee which held a meeting here last Tuesday, has sent out invitations to 500 owners of such lands and it is expected that the majority of them will attend the meeting to which they have been asked, and it is likewise believed that the new association, to be known as the Southern Alluvial Land Association, will start with a membership representing at least 2,000,000 acres of such property.

The first step in the launching of this new association was taken at a meeting of the committee of 5 held here last Tuesday. Those who participated were: Jno. W. McClure, Bellgrade Lumber Co., W. B. Burke, Lamb-Fish Lumber Co., Charleston, Miss., W. C. Bonner, of J. H. Bonner & Sons, Heth, Ark., W. E. Hyde, Lake Providence, La., and Chas. E. W. Luehrmann of the Chas. F. Luehrmann Hardwood Co., St. Louis.

It was decided at this meeting that a separate and distinct association should be organized, that only the delta regions of the Mississippi Valley states should be represented in the association, that revenues for running this association should be derived from a small assessment on the lands represented, and that, as soon as the organization had been perfected and a definite revenue had been established, a nation-wide campaign in behalf of these lands should be launched. There was much discussion in favor of establishing a department of the Gum Lumber Manufacturers' Association to handle these cut-over lands but they are owned by so many interests that the plan of a separate and distinct association to advertise them was regarded as the wiser and better method.

"HOG" HOUSES—NOT "SWINE" HOUSES.

The National Lumber Manufacturers' Association a few weeks ago prepared and issued an elaborate pamphlet on the building of "swine houses," and the issuance of this pamphlet was widely advertised. As a result there were requests for copies of the pamphlet from all over the country, but it was noted that when the farmers wrote in they asked for the "Hog House" book and that the editors of various agricultural papers also referred to it as the "Hog House"—not "Swine House" book. From this it seems to be inferred that the polite term of "swine" is not much in favor with practical farmers, so that the next edition of the "Swine House" book, which Secretary Kellogg will shortly issue, will be entitled "Hog Houses."

AGAIN IN THE MARKET.

The Hinton Bros. Lumber Co., of Lumberton, Miss., announces that its order file has been reduced to such an extent that it is again in position to take on additional orders for its long leaf yellow pine. The company withdrew from the market several weeks ago in order that it might give better attention to the orders already on its books, and shipments on these orders are now so advanced as to permit the company to again offer some of its stock. Examination of the company's price list, as of December 1, shows that on the majority of its dimension items it is asking from $4 to $5 discount on its ordinary sizes of 2 x 4 to 2 x 12 up to and including the 20-foot lengths.

The Latest News of the Lumber World

BIG COMPANY ORGANIZED AT SHREVEPORT.

Shreveport, La., Dec. 7—(Special Telegram).—The Peavy-Wilson Lumber Co. has been organized here with a capital of $1,000,000 fully paid in. The new company will build a mill with a daily capacity of 150,000 feet at or near Leesville, La., and it will also construct a railroad from Longleaf in Rapides Parish, on the Iron Mountain road, to a point on the Kansas City Southern road, probably to Leesville. The mill will get logs from a tract of 50,000 acres of timber land the Peavy interests recently purchased from the Southland Lumber Co., which is a corporation controlled by the Laird-Norton interests of Winona, Minn.

A. J. Peavy, of Shreveport, is president of the new company, S. R. J. Wilson is vice president, and John S. Welch is secretary and treasurer.

FINANCIAL TROUBLE IN ALABAMA.

Birmingham, Ala., Dec. 6—(Special Telegram).—The Newark Banking Co., and the American National Bank, of Newark, N. J., and N. W. Halsey & Co. of New York and Chicago, today filed a petition in bankruptcy in the United States court here against the H. H. Hitt Lumber Co., of Decatur, this state. The court has appointed W. W. Moss, of Norfolk, Va., as receiver.

The petition alleges that the H. H. Hitt Lumber Co. has an indebtedness of $628,000. A year ago the company reported actual assets of $742,996 and actual liabilities of $475,055, making a net surplus of $257,941. It has operated saw mills at Mt. Vernon, Ala., and at Mobile, Ala., and a box factory at Chattanooga, Tenn. The company was organized in 1911, at which time it took over the business of H. H. Hitt, who had been operating at Falkville, Ala. Mr. Hitt was originally financed by N. W. Halsey & Co. of New York and ran the mill until the present corporation was formed. The officers of the company at latest advices were: President, H. H. Hitt, Decatur, Ala.; vice president, W. H. Burch, Decatur, Ala.; secretary, James H. Jones, Decatur, Ala.; treasurer, E. H. Hatch, New York.

FEDERAL TRADE COMMISSION'S REPORT RELATIVE TO THE LUMBER INDUSTRY.

Washington, D. C., Dec. 9.—The Federal Trade Commission in its annual report to the president today has the following to say relative to its work on the lumber industry during the past year:

"An investigation of the lumber industry was initiated a number of years ago by the Bureau of Corporations, in accordance with a resolution of the senate, and though it issued several reports on this subject, some of the work remained uncompleted at the time of the organization of the commission. Since then certain new problems have developed in the lumber industry and the commission has been engaged in an investigation of these matters in co-operation with the Forest Service of the Department of Agriculture, and with the Bureau of Foreign and Domestic Commerce, Department of Commerce. These problems relate to the fundamental conditions of timber ownership, the manufacture of lumber, and the methods of distributing lumber products.

"Numerous conferences and hearings were had with other government agencies and also with representatives of the lumber industry and a definite plan of investigation was determined upon and the work commenced during the fiscal year 1916."

Taking up the question of the so-called Webb bill, with which all lumbermen are more or less familiar, and telling of its recommendation that some such law be passed by congress, the report says:

"This recommendation of the commission was given consideration by the committee on the judiciary of the House of Representatives, which reported a bill (H. R. 17350), commonly known as the Webb bill, embodying the principles recommended by the commission. This bill was passed by the house near the close of the present session, but there was not sufficient time left for its consideration by the senate.

"Particular attention, however, is called to the fact that the bill as originally reported to the house appears, in the opinion of the commission, to effectively meet the purpose for which it was drafted, yet, on the other hand, two amendments were made to the bill during the debate which seemed to give a basis for legal construction which might entirely nullify its purpose.

"The first amendment referred to was made in the first section of the bill. In order to permit co-operation only with respect to export trade, the term 'export trade' was originally carefully defined to exclude the manufacture or production of goods within the United States, but the amendment made it also exclude 'trading in or marketing' such goods within the United States. Obviously a successfully co-operative export organization would, in most cases, be obliged to purchase goods in the United States and therefore to trade in them.

"The second amendment referred to is found in the second section. This originally granted the right of co-operative associations for export trade, provided such association did not involve 'restraint of trade within the United States.' But the amendment added a further provision, namely, and does not restrain the export trade of the United States.' The commission is of the opinion that these provisions of the bill would not change the present law. But the very purpose of the bill was to clarify the law, while this amendment presents the same question of construction as the existing law. The law, therefore, would be neither changed nor clarified if the bill were enacted in the form in which it was passed by the house. Therefore the business man who is deterred from engaging in co-operative action in export trade by fear or doubt concerning the anti-trust laws would be left in exactly the same position as before."

MR. KEITH NOW CONVALESCENT.

The many friends throughout the country of Chas. S. Keith, president of the Central Coal & Coke Co., Kansas City, Mo., and also president of the Southern Pine Association, are gratified to know that he is now convalescing from a serious illness, with which he was attacked while at Portland, Ore., November 22. Mr. Keith comprised one of the party of eastern lumbermen who toured the Inland Empire and Pacific coast for the purpose of awakening interest in the work of the National Lumber Manufacturer's Association. He made notable speeches at Spokane, Tacoma, Seattle, Aberdeen, Portland and elsewhere. The party underwent many hardships on account of heavy rains during a part of its trip, and Mr. Keith caught a severe cold. An hour before the party was leaving Portland for San Francisco he was taken ill and received medical attention, but went on the train and on the day of his arrival at San Francisco was taken to a hospital. There pneumonia developed and involved both lungs. Mrs. Keith was sent for and has been with him during the critical period. He rallied, however, and at latest accounts was pronounced out of danger and rapidly regaining strength.

ENORMOUS ORDERS FOR RAILROAD EQUIPMENT.

Railroad authorities state that November witnessed the placing of the greatest number of orders for freight equipment of any month known in history. The total number of cars ordered was 56,530, at a cost of approximately $83,000,000, which establishes a new record, as never before in any single month have freight car orders exceeded 25,000 cars. During the eleven months ended December 1, 1915, the total of orders given for cars was less than double the quantity for which orders were placed in October and November alone. Foreign buyers purchased 1,000 freight cars during November at an approximate cost of $1,500,000. Aside from the orders given for cars in November, there were orders for 975 locomotives, of which 633 were for foreign delivery. There were also purchased during November 491 passenger cars and 737,000 tons of rails. The total purchases of railroad cars, ties, rails and other equipment during November amounted to $155,551,000 in value.

NEW SHIPS TO BE BUILT OF SOUTHERN YELLOW PINE.

Orange, Tex., Dec. 1.—Building activities at port of Orange, Tex., alone require 9,000,000 feet of yellow pine.

The five-masted, top-sail rigged schooner, City of Orange, was launched at the gulf port of Orange, Tex., November 19.

The launching was an event of importance not only in establishing Orange, Tex., among the new and important ship-building points on the southern Atlantic coast. It commanded the keen interest of southern lumbermen because all of the wood used in the construction of the new vessel was southern yellow pine.

The City of Orange is 247 feet over all, 43 feet beam, 21 feet 6 inches depth of hold, and with a draught load of 23 feet 6 inches. She registers approximately 1,500 net tons, and has a cargo capacity of 3,000 tons. She was built by Fred H. Swails for Henry Piagio and associates of Gulfport, Miss., at the mill yard of the Miller & Link Lumber Co., which furnished the material used. To build a ship of this size entirely of southern yellow pine 1,250,000 feet of lumber were required.

The City of Orange is the first completed of four vessels simultaneously under construction at the port of Orange. The remaining three soon will be ready to take the water, and keels will be laid in the near future for four more, all of which will be completed in about one year from the laying of the first keel. Of the other three vessels now on stocks one is a duplicate of the City of Orange, another is a four-masted schooner of about 900 tons, and the third a three-masted schooner of 1,100 tons. The marine building activities at Orange also include an ocean going tug, which soon will be ready for launching. The total tonnage of the City of Orange and the other vessels now on stocks at Orange is approximately 5,000 net registered tons, with 6,000 net tons under contract for the Henry Piagio interests and the Orange Maritime Corporation. The principal material used in the construction of all of these vessels will be southern yellow pine, which means that more than 9,000,000 feet of that material will be required.

All of these vessels will be under American registry, the home port being Orange, and all, with the exception of the tug, will be used in the transatlantic lumber carrier trade.

OBITUARY

C. L. WILLEY.

Cameron Lyon Willey, head of the large mahogany and veneer institution at Robey street and Blue Island avenue, this city, died suddenly Tuesday evening, November 28, while visiting at the residence of his son, Charles B. Willey, 4621 Michigan avenue, this city, a short distance from his own home, which was at 4750 Grand boulevard. Mr. Willey and his wife had gone to take dinner with their son, and while standing in the parlor he dropped to the floor, and was dead before aid could be extended, supposedly from heart trouble.

C. L. Willey was born in Dansville, N. Y., in 1855. He attended school at Russell Institute, Leroy, N. Y., from which he was graduated in 1871. He started in the lumber business with his father, who operated a saw and shingle mill in Warren, Pa., and continued there for seven years. He engaged in the lumber business in 1875, at Allegheny City, Pa., now a part of Pittsburgh. In 1892 he came to Chicago and started a mahogany and veneer business at the corner of Stewart avenue and Thirty-fifth street. He removed from there a year later to Thirty-fifth and Iron streets, just across the south branch of the Chicago river from the Rittenhouse & Embree Co.'s yard. From there

THE LATE C. L. WILLEY, OF CHICAGO.

he removed about fifteen years ago, to 2546 South Robey street, where he purchased a brick building and lumber yard, and has continued there ever since. He installed a sawmill and veneer plant, aud had been unusually successful in the manufacture of his specialties.

Deceased is survived by his widow and by his son, Charles B. Willey, who for many years has been associated with his parent in the business at Chicago and at Memphis, Tenn., where he conducted a sawmill for several years.

Funeral services were held Thursday, November 30, at the chapel at Rose Hill cemetery, being conducted by the Rev. W. O. Waters, of Grace Episcopal Church. The remains were placed in a vault at Rose Hill, and later will be taken for interment to Dansville, N. Y.

CAPTAIN J. T. JONES.

New Orleans, La., Dec. 6.—[Special Telegram]—Captain Joseph T. Jones, for many years one of the best known business men in Mississippi, and a builder of large industries at Gulfport, that state, died at Buffalo, N. Y., Wednesday morning, December 6 at 7 o'clock, following a short illness.

Captain Jones was one of the leading business men of the United States, and had a most remarkable career. He was born in Philadelphia, Pa., June 11, 1842, and was of English descent. At the outbreak of the war he enlisted in Company H, Ninety-First Pennsylvania Volunteer Infantry, and participated in many of the noted battles of the war, which included Fredericksburg, Antietam and Gettysburg. At Gettysburg he had command of the picket guard in front of the summit of Round Top. He was wounded in the battle of the Wilderness, July 2, 1864, but recovered. At the battle of Cold Harbor he was wounded in both feet, from the effects of which he had never thoroughly recovered. He was promoted from the ranks to be quartermaster sergeant, then second lieutenant, and later to the captaincy of his company. At the conclusion of the war, where he served with conspicuous honor, he went to the Pennsylvania oil fields, locating first at Titusville, and then at Bradford, and became one of the most prominent oil producers of the Bradford district. It is said of him that he made and lost three fortunes, but his indomitable courage carried him through to affluence, and in the last twenty years of his life he had possessed large means.

In 1890 he removed from Bradford to Buffalo, and thenceforth became one of its leading citizens. About fifteen years ago he got interested in the development of a harbor at Gulfport, Miss. He bought the Gulf & Ship Island railroad, and constructed a harbor at Gulfport, expending, it is said, something like $2,500,000 on his own responsibility. As a partial recognition of his enterprise the United States government paid him, it is reported, about $1,000,000 for his expenditure. However, he developed a harbor at Gulfport for deep water trade, and erected there one of the finest hotels in the south, the Great Southern, which became a noted winter resort. He built the city of Gulfport, which has now at least 15,000 inhabitants. In 1898 he endeavored to withdraw from active supervision of his vast interests and entailed the management of his Gulfport properties upon his son, Joseph Albert Jones, but the sudden death of the son in 1910 compelled him to again assume the heavy responsibilities of the Gulfport interests, and he fulfilled his obligation to the last.

Captain Jones was one of the most remarkable men with whom the writer has ever come in contact. Strictly honorable in all of his business dealings and jealous of his integrity in every transaction, he exacted and received a corresponding square deal in all his affairs. He was public spirited, and contributed largely to every public enterprise in his home city of Buffalo, as well as at Gulfport, where he was more vitally interested. When it was proposed to have the Pan-American Exposition at Buffalo, Captain Jones came to the front royally his subscription to the undertaking being one of the largest made, and insuring the success of the exposition. His loss to Buffalo and to Gulfport will be irreparable. He was proud of Gulfport, because it was a personal monument to his enterprise and foresight and justly so.

After the announcement of Captain Jones' death the telegraph office at Gulfport was congested with messages of condolence to his family at Buffalo.

The funeral services were held from the family residence at Buffalo, on Friday afternoon, December 8, at 3 o'clock, and burial was in the family vault at Forest Lawn cemetery.

As a memorial to Captain Jones the business houses of Gulfport were closed during the hours of the ceremonies.

Captain Jones is survived by his widow, Melodia E. Blackmar Jones, and his daughter, Miss Grace E. Jones.

O. H. SAMPLE.

Oscar H. Sample, a prominent lumberman of St Louis, Mo., with a branch office in Chicago, was killed in an automobile accident at St. Louis on the evening of November 25. Mr. Sample was driving from his office to his home, which is located at Webster Groves, a suburb, and collided with a steam road roller, which was standing in a ditch beside the road. As he was alone at the time, there was no way of ascertaining how the accident happened. Mr. Sample was thirty-nine years old, and leaves a widow and three children, two sons and a daughter. Funeral services were held from his late residence, 531 Gardner avenue, Webster Groves, Mo., Monday, November 27, and the interment was in Oak Hill cemetery.

JOHN O'BRIEN.

John O'Brien, jr., one of the best known among the lumbermen in Chicago territory, passed away at the home of his sister, Mrs. D. F. Kinnally, 4521 Prairie avenue, this city, on Sunday, October 22, of pneumonia, following a year of ill health from diabetes. Mr. O'Brien was the eldest son of the late John O'Brien, for nearly a half century prominently identified with the wholesale lumber industry of Chicago and with manufacturing operations in Bayfield county, Wisconsin, and in the Yazoo Delta in Mississippi. Mr. O'Brien, senior, passed away in February, 1907, and his wife died in 1915.

John O'Brien, jr., was born in Chicago forty-one years ago and secured his education at the Chicago public schools and at St. Viator's college, Kankakee, Ill., after which he took a position in his father's wholesale lumber yard, then located on Throop street, this city. After a few years of practical experience in the yard and office he went to Ashland, Wis., where for some years he was engaged in operating the company's sawmill and shipping the product to lake markets. Later the company bought a large tract of hardwood timber in the vicinity of Philipp, Miss., and he had charge of operations at that point for several years. Returning to Chicago, he embarked in business for himself, conducting for some time a wholesale trade. A few years ago he removed to Janesville, Wis., where he built up an excellent business at wholesale and on commission, commanding some of the best trade in retail and manufacturing lines in that section. For a year or more Mr. O'Brien had kidney trouble and for several weeks in the early fall he had been in Chicago taking treatment and improved rapidly. Early in October he felt so much better that he decided to make a trip among the northern mills and returned to Janesville October 13. His malady took a turn for the worse and he came back to Chicago for treatment. He became quite ill while stopping at his sister's home and on Friday was attacked with pneumonia, passing away at 8:45 o'clock Sunday evening, October 22.

Mr. O'Brien is survived by his widow, Mrs. Mary McNeill O'Brien, two daughters, Misses Marion

THE LATE JOHN O'BRIEN, OF JANESVILLE, WIS.

and Frances and a son, Jack. He is also survived by four sisters, three of whom are married and two brothers, Walter and Robert, all residents of Chicago.

The funeral was held from Mrs. Kinnally's residence on Tuesday, October 24, and the interment was in the family plot in Calvary cemetery.

GEORGE C. BROWN AND CO. ENLARGE OPERATIONS.

Memphis, Tenn., Dec. 6.—George C. Brown & Co., with headquarters at Memphis and mill at Proctor, Ark., have purchased some 12,000 acres of hardwood timber lands and stumpage in Mississippi and Arkansas, and have likewise sold about 5,000 acres of cut over lands in the latter state. The Mississippi timber purchases have been made in Calhoun and Grenada counties, while the Arkansas purchase has been made in Chicot county. The company plans the buying of still other lands on which options have been secured, and it likewise plans the building of at least two mills, one near Calhoun City or Grenada, in Mississippi, and one near Lake Village, in Arkansas.

It some time ago increased its capital stock 100 percent, with a view to enlarging its scope of operations in the southern hardwood territory, and these timber purchases are directly in line with the policy of expansion. It is proposed to establish these new mills within the next year, and also to build a railroad in Mississippi some 35 miles in length, particularly if enough timber car be secured to justify this course. Announcement of these purchases, of the options secured, of the plan of building new mills and of putting in a railroad, has been made by the president and secretary of the company.

ANNUAL REPORT OF CHIEF FORESTER.

Washington, D. C., Dec. 9.—There was an increase in the receipts of the national forests in 1916 over 1915, according to the annual report of the chief forester, which was made to the secretary of agriculture today. The receipts during the fiscal year 1916 were $2,823,540.71, which is an increase over last year of $342,971.36.

The timber receipts were $1,412,592.51, an advance of $257,458.56, or 20 percent. Taking up the question of the receipts from the forests, the chief forester in part says:

"At present the receipts from the national forests are approximately three-fourths of what it costs to protect them and carry on the current business. It will be necessary to increase the earnings about $1,000,000 a year to cover the cost of actual operation. In addition to this cost, however, there are expenses which are primarily in the nature of investments. All expenses connected with the National Forests, including these investment expenses as well as the cost of operation, approximate $5,275,000." Taking up the proposition of the sale of timber on the national forests, Mr. Graves says:

"In the first years of administration of the national forests by the Forest Service timber receipts mounted rapidly. A period of prosperity and activity in the lumber industry coincided with the opening of the forests to general use through the energetic development and application of forestry methods. The panic of 1907 completely altered the situation. Vast quantities of private timber are now on the market and stumpage prices have been declining, with the prospect of extensive forced liquidation. In consequence the lumber industry is in an unstable and unhealthy condition. This situation naturally affects the demand for government timber. There is a healthy and increasing local demand for timber needed in the development of the country, which is being taken care of through sales at an equitable price. Business of this character is growing and bound to continue to grow steadily. Sales for the general market, on the other hand, will fluctuate with the prevailing conditions. In general, however, there will be an increasing total of receipts from timber sales each year." Taking up in his report the investigation of the lumber industry, Chief Forester Graves says:

"A comprehensive study of the lumber industry was begun by the Forest Service early in 1914. The Bureau of Corporations and the Bureau of Foreign and Domestic Commerce joined in this survey, which aimed to analyze in a constructive way the conditions in the leading forest using industry in the United States, and to show their bearing both upon the health and stability of the industry and upon the conservation of the timber resources of the nation.

"The investigations conducted by the Forest Service have extended over the regions of the south and west, where the bulk of the remaining forests are located and lumber manufacture is now most active, and 11 of the central states, where the distribution of lumber is probably most highly developed and its varying phases and tendencies are to be seen most clearly. Other studies have dealt with the technical side of utilization and marketing and the replacement of lumber by other structural materials.

"The Forest Service has co-operated with the Bureau of Foreign and Domestic Commerce meanwhile in studies of the opportunities for marketing American lumber abroad; and with the Federal Trade Commission in a series of hearings for the presentation of data by the lumbermen themselves regarding the condition of their industry. The service has been in close touch with the Federal Trade Commission in the development of the entire inquiry and in the consideration of its conclusions, with a view to making the study of as much value as possible to the commission in relation to business methods and forms of organization in this industry.

"The results of this broad survey, which is practically completed, will be embodied in 10 bulletins dealing with such subjects as timber ownership and lumber production by important regions, the cost and methods of distributing lumber, the most effective use of material now wasted in manufacture or converted into products of little value, and the character of the public timber holdings, together with the methods of administering them and the economic service which they should render.

"The investigation has brought out strikingly the bad effect of the wholesale turning over of public timber lands into private ownership under the laws applicable to the public domain before the national forests were created. The conditions resulting from private ownership, with its inevitable speculation and high capitalization of private timber lands, and from the demands of private capital have turned one of the great natural economic assets of the country into an industrial burden. Its weight is now being felt in frequent overproduction of lumber, which demoralizes the industry and leads to wasteful use of the very resource acquired from the public. These conditions have been accentuated by the narrowing market for lumber in relation to other structural materials, which has come about through changes in the standards and requirements of the country.

"Although difficult by reason of the upset conditions in the lumber industry, the need for conserving the forests of this country is just as manifest as ever. The public itself is concerned most vitally in the long run."

SHIP BUILDING ON COAST.

San Francisco, Cal., Dec. 4.—High charter rates and a scarcity of available tonnage are now the sole factors in holding back a huge export business in Pacific coast timber products. There is a strong demand for lumber in Australia, Hawaii and on the west coast of South America and splendid prices would be paid if deliveries could be made within a reasonable time. A large quantity of redwood ties sold for delivery to the United Kingdom have lain for months on the wharf at Eureka, and lumber and ties for South America that would ordinarily be shipped direct from that port are being brought to San Francisco and sent out on regular coasting vessels in small lots whenever space can be secured.

Lumbermen are expecting a drop shortly in charter rates, owing to the large number of vessels being built in California and in the northwest. About eighty vessels are now in course of construction, most of these being of the auxiliary motor schooner type and especially adapted to the lumber-carrying trade. More than one hundred and sixty large freighters are being built in Japanese yards and by spring a large number of these will be in commission.

TO BECOME CENTER OF SHIPBUILDING INDUSTRY.

Tacoma, Wash., Dec. 5.—Three big shipyards, the largest of which will be capable of constructing steel battleships for the United States government, will be located in Tacoma, according to announcements made during the past two weeks. The companies are the Todd Shipbuilding & Drydock Corporation, capitalized at $1,500,000; the Washington Shipbuilding Co., capitalized at $500,000, and the Tacoma Shipbuilding Co., capitalized at $300,000.

The Todd company is headed by William H. Todd, president of the Robins Drydock Co. of New York, and one of America's leading shipbuilders. It has secured a 100-acre site on Commencement bay and will build a plant large enough to construct nine ships at one time. One-third of the stock has been taken up by Tacoma interests.

Work on the plant will be started at once, all the preliminary details having been completed and the stock all subscribed for. Mr. Todd has the backing of eastern capital in the venture and the yards will become one of Tacoma's largest industries. Nearly 5,000 men will be employed at first and the plant will be enlarged as conditions warrant.

The Washington company has been organized by a party of Tacoma business men headed by William Jones, president of the Jones-Scott company. It has contracts for eight steel freighters of 8,800 tons displacement. These ships will be 453 feet long and 54 wide. Work on the vessels will be started before January 1.

The Tacoma company was organized by another group of local business men headed by John S. Baker, president of the Fidelity Trust Co. It is negotiating for the contracts for a number of steel vessels and several lumber carriers.

The Seaborn Shipbuilding Co., which started work here several months ago, has nearly completed two large lumber schooners which will be launched about December 16. The company has contracts for four more ships of smaller size.

A STRIKE AT SUMRALL, MISS.

Hattiesburg, Miss., Dec. 6.—The employees of the J. J. Newman Lumber Co., at Sumrall, Miss., went out on strike for higher wages yesterday morning after holding a meeting and appointing a committee to present their demands to the company. Their demands were for a 25 percent increase for common labor and a 10 percent increase for skilled labor. Manager W. J. Haymen explained to the men that if the company were in a position to do so, it would give them the increase, but that it was not making any money because a great portion of the lumber cut could not be shipped, due to the scarcity of cars and that the mill could easily remain idle until such a time as the men cared to go back to work. The company will not bring in other labor to start the mill, as it has millions of feet of lumber in pile, very little yard room left and few cars can be secured.

MISS LOULA LONG WINS ADDED HONORS.

Miss Loula Long, daughter of R. A. Long, president of the Long-Bell Lumber Co., Kansas City, Mo., is referred to by the Chicago Herald of December 6 as "America's foremost horsewoman." Miss Long had several entries at the horse show at the International Live Stock Exposition held last week at the International Amphitheatre, Forty-Second and Halsted streets, this city. On Monday she drove her famous trotting team "Animation" and "Anticipation," easily defeating the other three entries Miss Long appeared in spite of the orders of her physician, she having recently sustained a fracture of her arm, from which she had not fully recovered. On Wednesday evening she won another blue ribbon with her bay saddle horse, "My Major Dare," which has been undefeated this season. There were three other contestants in this class and Miss Long's victory was notable.

DEVELOPMENT LEAGUE BEGINS WORK.

New Orleans, La., Dec. 4.—First meeting of the executive committee of the recently organized Southern Gulf Coast Tourist and Development League took place last week at Mobile. It was announced that a preliminary contract for raising advertising to $250,000 had been entered into, and that plans had been laid for an intensive campaign, to begin at Pensacola, within the next ten days.

The contract with the James William Bryan Co. calls for a fund of not less than $250,000, to be expended, under the direction of the executive committee, in a national campaign of advertising and exploitation, for the settlement and development of the gulf coast, and the attraction of investment capital, tourists and industries. The territory embraced runs from Santa Rosa county, Fla., to Pearl River, Miss., and from 75 to 100 miles inland, covering ninteen counties in the three states, as follows: Santa Rosa and Escambia counties, in Florida; Escambia, Conecuh, Monroe, Clark, Baldwin, Washington and Mobile counties, in Alabama, and Jackson, Greene, Forrest, George, Perry, Stone, Harrison, Hancock, Pearl River and Lamar counties, in Mississippi.

M. B. Trezevant, of the Bryan company, will go to Pensacola to co-operate with the local committee in making arrangements for the big meeting of Pensacola business men and other citizens with members of the league's executive committee, and Messrs. Bryan and Fox. Immediately thereafter the campaign will be put under way.

After Pensacola the executive committee will visit Santa Rosa and Escambia counties,, Mobile, Jackson, Fulton, Brewton, Bay Minette, Ala., and Hattiesburg, Lucedale, Leakesville, Wiggins, Purvis, Lumberton, Moss Point, Pascagoula, Ocean Springs, Biloxi, Gulfport, Pass Christian, Bay St. Louis, Waveland, and Logtown, Miss.

A CONSUMERS' REGISTER.

The National Hardwood Lumber Association, of this city, has just issued Volume 5 of its Consumers' Register, being the first section of its 1917 edition. This is the largest and most complete edition of this work thus far published. Its subject-matter is drawn from twenty-six different states extending from New Hampshire to California, and from Georgia to Canada. It contains the lumber requirements for the year 1917 of over 600 of the leading factory consumers of hardwoods in the United States and Canada, these requirements in the aggregate exceeding one billion five hundred million feet.

The first volume of the Consumers' Register was issued by the association a little over three years ago in compliance with requests from a good many of its members for a service of that character. The general recognition of its value and the demand for it caused the board of managers of the association at the last annual convention to take action whereby the Consumers' Register was officially adopted as one of the fixed benefits of membership, and the publication of a regular semi-yearly edition of it was authorized.

CHICAGO HOO-HOO MEETING.

The members of the Hoo-Hoo order in Chicago and surrounding territory have planned a concatenation to be held in the rooms of the Lumbermen's Association of Chicago, Lumber Exchange building, next Monday evening, December 11. L. J. Pomeroy, the new Vicegerent Snark for the northern district of Illinois, will make his initial appearance in his official capacity at that time and all the members should signalize the event by giving him a lively reception. Mr. Pomeroy has been a member of the Hoo-Hoo order for many years and has always taken a deep interest in its affairs. He is the resident manager of the Landeck Lumber Co., of Milwaukee, and conducts its Chicago office at 1051 Marquette building.

Stacey C. Bennett, of the Hardwood Mills Lumber Co., Monadnock building, this city, who is Supreme Bojum of the order, will render efficient aid to Vicegerent Snark Pomeroy in his arrangements for this meeting. However, the immediate preparations for the gathering are in the hands of an executive committee, composed of the following: George Wilson-Jones, chairman; Edward A. Lang, Robert R. Slayton, John W. Anderson, Minor E. Botts, Harry B. Darlington, Adolph H. Ruth, Alfred R. P. Schmechel and A. C. Quixley.

Those who will officiate at the concatenation with the names of their alternates should they not be present, are the following:

Snark, B. A. Johnson; alternate, J. L. Lane.

Senior Hoo-Hoo, Edward A. Lang; alternate, M. E. Botts.

L. J. POMEROY, OF CHICAGO.

Junior Hoo-Hoo, Tom A. Moore; alternate, L. J. Pomeroy.

Scrivenoter, George Wilson-Jones; alternate, Alfred R. P. Schmechel.

Bojum, H. B. Darlington; alternate, A. B. Cone.

Jabberwock, John W. Anderson; alternate, A. H. Ruth.

Custocatian, F. M. Baker; alternate, A. J. Cross.

Arcanoper, M. L. Pease; alternate, George H. Ostrander.

Gurdon, R. R. Slayton; alternate, A. C. Quixley.

The following standing committees have been named by Vicegerent Snark Pomeroy:

Publicity committee: L. E. Fuller, chairman; A. C. Quixley and Tom A. Moore. Nosebag committee: John W. Anderson, A. H. Ruth and Minor E. Botts. Stunts committee: Alfred R. P. Schmechel, R. R. Slayton, E. A. Lang. Loopcat committee: Stacy C. Bennett, F. M. Baker, E. A. Lang. Spieler committee: Minor E. Botts and George Wilson-Jones.

LUMBERMAN GIVES TO UNIVERSITY.

The University of Chicago formally announced last week that Charles H. Ruddock, head of the Ruddock-Orleans Cypress Co., the prominent manufacturer of cypress lumber of New Orleans, La., but who retired from active business several years ago and is now residing in New York, has made a gift of $200,000 to the fund of $700,000 for the erection of the new medical college connected with the university. Mr. Ruddock, long a resident of Chicago and is highly regarded by members of the lumber industry here and elsewhere. His brother-in-law, Dr. Frank Billings, the eminent Chicago surgeon, will, it is understood, be the head of the new institution, which will be devoted largely to research work.

LOCATION OF BOX CARS.

The Southern Pine Association, with characteristic enterprise, is publishing in its Service Bulletin each week figures on the car supply question. In its second number, printed December 5, it gives a complete record of the location of box cars as prepared by the car efficiency committee of the American Railway Association for the date of November 1. This is nearly six weeks ago, but will give our readers a fairly satisfactory idea of what the box car equipment of the railroads of the country were at that time.

In the New England district, seven railroads reported excess box cars of 17,114.

In the middle Atlantic district, sixteen railroads reported excess box cars amounting to 73,263, with a deficiency on two roads amounting to 749 cars.

In Group 3, the Great Lakes district, there was a deficiency November 1 of 1,370 cars and an excess of 650 cars, eighteen railroads reporting. This made a net deficiency of 720 cars.

In the southeastern district, comprising Group 4, there was an excess supply of cars November 1 of 10,403 and a deficiency of 7,404 cars, leaving a net excess of 3,026.

In the southern district, east of the Mississippi, there were shortages on eight lines, and two of the lines in that territory had small surpluses. The total deficiency was 27,243 cars, and the total surplus 355, a net shortage of 26,488.

In the middle west district there were deficiencies on eight of the twenty roads in the group aggregating 9,548 cars, and there were surpluses of 750, making a net shortage of 8,798.

In the northwestern district, on the Union Pacific and St. Joe & Grand Island, there was a deficiency of 6,393 box cars.

In Group 8, southwestern district, deficiencies were shown on eight of the ten roads reporting, aggregating 12,288 cars. Two roads, the Kansas City Southern and Terminal Railroad of St. Louis, reported 1,737 cars in surplus, leaving a net deficit of 8,327 cars.

In the southern district west of the Mississippi, which makes up Group 9, there were surpluses shown November 1 of 3,154 cars and a deficit of 1,944 cars, making the net surplus 1,210 cars.

In the western district, which comprises the six roads in Group 10, the excess of cars was 1,556, while the deficit was 11,502, a net deficiency in that district of 9,946.

In the Canadian district, the excess of cars was 2,627, while the deficiency was 16,481, leaving a net deficiency of 13,854.

GENERAL LUMBER SALESMANSHIP CONFERENCE.

Merrill, Wis., Dec. 8.—[Special Telegram.]—The first general lumber salesmanship conference under the auspices of the Northern Hemlock & Hardwood Manufacturers' Association convened at the Badger Opera House, in this city, at 2 o'clock this afternoon, with 125 lumber manufacturers' representatives and salesmen in attendance. The convention was called to order by President J. T. Phillips, of Green Bay.

The lumber manufacturers of Merrill as hosts, with George C. Robson as chairman, have done everything possible to care for their guests from out of town. Although the attendance of many members has been delayed on account of a freight wreck, the program will be carried out as planned, with few exceptions. Addresses on salesmanship, inspection, transportation and practical demonstrations of manufacturing and woods operations will be given during the three days' conference. Everything points to an exceedingly helpful and profitable meeting.

STRINGENT EFFORTS TO RELIEVE CAR SHORTAGE.

New Orleans, La., Dec. 5.—A special committee, known as the conference committee on car efficiency, representing the American Railway Association, has established an office in Washington and is co-operating with the Interstate Commerce Commission with an effort to relieve the freight car shortage. The personnel of this committee is as follows:

George Hodges, Washington, D. C., chairman; E. J. Pearson, vice-president, New York, New Haven & Hartford railroad; C. M. Shaeffer, general superintendent of transportation, Pennsylvania railroad; E. H. Coapman, vice-president and general manager Southern Railway Co.; W. L. Park, vice-president Illinois Central railroad; W. A Worthington, vice-president and assistant to chairman, Southern Pacific Co.

This committee has been given plenary power to issue and enforce such orders as may be necessary to accomplish what is desired. It has issued the following order to carriers:

"In circular issued November 29, you were advised that certain sections of the country are suffering greatly from a shortage of box cars, and immediate relief must be secured. This shortage is caused by deficiency in box car equipment in all sections of the country, except in Central Freight, Trunk Line and New England territory. Ordinary means will not remedy this situation. Emergency measures are necessary.

"To this end it is directed:

"That lines in the territories named below shall forthwith, and until further notice, deliver to their western and southern connections a percentage of box cars, either loaded or empty, in excess of those received in such connections, as shown by the percentage below:

"Railroads in Group 1 (New England district having box cars on their line in excess of number owned, 30 percent.

"All railroads in Groups 2 and 3 (Middle Atlantic district and Great Lakes district) regardless of number of box cars on line, 20 percent.

"All railroads in Group 5 (Southern district, east of Mississippi river) regardless of number of box cars on line, 10 percent.

"All railroads in Group 6 (Middle west district) regardless of number of box cars on line, 20 percent.

"All railroads in Group 7 (Northwestern district) regardless of number of box cars on line, 15 percent.

"All railroads in Group 8 (Southwesten distict) regardless of number of cars on line, 10 percent.

"It is further directed that a report be forwarded promptly to George Hodges, chairman conference committee on car efficiency, Room 44, Kellogg building, Washington, D. C., showing the total number of box cars delivered and total number received, divided as between junction points with eastern and northern connections and western and southern connections, for the period ending midnight, Friday, December 8, and similar report for each weekly period thereafter.

"It is requested that the western railroads make a strong effort to discourage the loading to the Atlantic seaboard and New England of commodities of a character which it is apparent cannot be readily unloaded and promptly disposed of.

"It is requested that eastern roads promptly embargo all freight which cannot readily be unloaded."

CYPRESS USERS TO VISIT MILLS.

A visit of washing machine manufacturers to some of the plants manufacturing cypress lumber in the Louisiana field is to be made next week, according to plans formulated by Alfred J. Cross, of the C. L. Cross Lumber Co., Monadnock building, this city. The makers of this useful article of household equipment have long been users of cypress and in order to demonstrate the peculiar adaptability of the wood to that purpose, to show how cypress is manufactured and graded and the character of various grades that are used for washing machines, the trip is to be made. Raymond Marsh, of the American Washing Machine Manufacturing Association of Chicago; F. H. Bergman, of the One Minute Manufacturing Co., Newton, Iowa; W. H. Voss, of the Voss Bros. Manufacturing Co., Davenport, Iowa, and Louis Dietz, of the Boss Washing Machine Co., Cincinnati, Ohio, have arranged to leave with Mr. Cross Sunday, December 10. There is no better posted handler of cypress in this market than A. J. Cross and he has long devoted especial attention to the wants of the washing machine people, as well as in other channels of cypress consumption

The Latest News from Washington

Lumber World Review, Washington Bureau, 208 District National Bank Building

L. M. LAMM, Staff Correspondent

PRESIDENT WILSON RECOMMENDS PASSAGE OF THE WEBB BILL.

Washington, D. C., Dec. 6.—Lumbermen throughout the country cannot but be pleased at the reference made by President Wilson yesterday in reading his message to congress of the export situation, and favoring co-operation in export trade. In this he practically gave his support to the Webb bill, which is now pending in the senate, and on which it is hoped there will be some action in the very near future. Regarding this export matter the president said in part:

"I shall not argue at length the desirability of giving a freer hand in the matter of combined and concerted effort to those who shall undertake the essential enterprise of building up our export trade. That enterprise will presently, will immediately assume, has indeed already assumed, a magnitude unprecedented in our experience. We have not the necessary instrumentalities for its prosecution; it is deemed to be doubtful whether they could be created upon adequate scale under our present laws. We should clear away all legal obstacles and create a basis of undoubted law for it which will give freedom without permitting unregulated license. The thing must be done now, because the opportunity is here, and may escape us if we hesitate or delay."

RAILROADS ORDERED TO RETURN FREIGHT CARS TO OWNERS.

Washington, D. C., Nov. 28.—Instruction to all the railroads of the country at once to return to their owners all open top freight cars, either loaded or empty, have just been issued by the conference committee on car efficiency representing the American Railway Association.

To insure the carrying out of this order, railroads have been asked to bring these instructions to the attention of all railroad officers and employes who have anything to do with directing the movement of cars.

For the information of the conference committee and the Interstate Commerce Commission, all roads have been requested to send to the special bureau, which the carriers have just opened here, copies of all orders issued with the committee's instructions.

The conference committee on car efficiency, which has recently been appointed by the American Railway Association, will remain in session here until some real relief has been secured from the car shortage. The members will be in daily consultation with Commissioner McChord of the Interstate Commerce Commission, with whom the railroads are co-operating to relieve the car shortage situation.

GOVERNMENT REPORT OF IMPORTS AND EXPORTS FOR OCTOBER.

Washington, D. C., Dec. 5.—Imports during the month of October were slightly larger and exports slightly less than those of September, according to an announcement recently made by the Department of Commerce.

The month's exports totaled, according to the department, $490,600,000, a recession of $24,400,000 from the high record of September. October imports aggregated $176,400,000, an increase of $12,400,000 over September. October, 1915, gave a total of $149,200,000 and October, 1914, $138,100,000.

The nation's foreign trade during the year which ended with October, 1916, reached the unprecedented total of $7,463,000,000, as compared with $5,012,000,000 in 1915 and $4,021,000 in 1914.

IMPORTANT DEMURRAGE ORDER.

The commissioners have issued an interesting demurrage order to carriers throughout the country since our last issue of special interest to the trade. In part they say relative to new rates:

"It is ordered, that said carriers parties to said schedules be, and they are hereby authorized to file new schedules (1) making no change in the present effective form of the weather rule or average agreement; (2) providing for two days' free time exclusive of Sundays or legal holidays, and the following rates of demurrage after expiration of free time: $1 for the first day; $2 for the second day; $3 for the third day and $5 for the fourth and each succeeding day; (3) provided track storage charges shall remain in effect as at present, except where the demurrage rate is $3.00 per day or more; (4) provided further, that these provisions be embodied in tariffs fixed to expire by limitation on May 1, 1917."

CO-OPERATION IN AMERICAN EXPORT TRADE.

Washington, D. C., Dec. 5.—Lumbermen especially and exporters of all commodities should be very much interested in the report, just made public, on "Co-operation in American Export Trade," compiled by the Federal Trade Commission. The report itself is in two volumes, one 400 and the other nearly 600 pages in length. Some very interesting conclusions are reached by the commission, and considerable space is devoted to the lumber and allied interests.

Speaking of the question of advantages and disadvantages of proposed export combinations of lumber producers, the report says:

"Many of the arguments for and against the proposed lumber export combinations apply also to other lines of exports. Only their bearing on the particular conditions existing in the lumber industry will be considered here. Apart from the possible legal restrictions which may be held to exist against such proposed activities, it has been questioned whether monopolistic power would not be acquired by such combinations that would or could be used to the detriment of the producers who remained outside of them, and, also, to the detriment of the domestic consumer. It is advisable to examine the bearing of such objections on the actual conditions in the lumber industry before the advantages sought by the proposed combination are considered.

"The possibility that the combinations would have a detrimental effect on the interests of the domestic consumer is based on the assumption that the price he would have to pay for his lumber would be unduly raised, through the lessening of the available domestic supply through exportation. That is the only way that these combinations, which concern themselves solely to the export business, could affect his interests adversely. The facts regarding the conditions under which the lumber industry exists in the United States do not support this assumption. More than nine-tenths of the lumber annually cut goes into domestic consumption. All but a relatively small portion of the mills in the industry are so located that it will never be practicable for them to export any considerable part of their product. These mills must continue to depend on the domestic demand for the consumption of their output. Furthermore, of the mills which are so located that it is practicable for them to export there will be a number that will prefer to remain outside of the proposed combinations. Such mills will be free to sell all or part of their product in either the domestic or foreign markets as their individual interests may dictate. The domestic consumer is thus assured of an ample supply. Any injury to his interests would have to come from the higher prices which the foreign consumer might be willing to pay for the exportable lumber than the domestic demand will warrant. To the extent that such higher foreign prices encouraged exportation the supply available for domestic consumption would be lessened. If exportation were stimulated to a sufficient degree, the American consumer would have either to pay some advance in the prices of the grades of lumber demanded by the export trade or use as a substitute another grade of lumber, or material other than wood. In fact, the present competition of wood substitutes is so acute that it contributes in considerable degree to the present depression in the lumber industry. Any attempt to raise domestic prices by mills whose location forces them to depend wholly on domestic consumption must meet an increased competition from wood substitutes. Any appreciable difference in prices, due to the increased exportation, is likely to be limited to certain high grades for the few woods whose physical characteristics are such that it is difficult to find satisfactory substitutes for them. The practicable effect which any possible depreciation of domestic prices in such few instances would have on the domestic market would be relatively insignificant. Insofar as the export mills participate also in the domestic trade, they must meet the prices obtained for similar stock by the mills which are dependent exclusively upon the domestic trade."

Taking up the question of the exportation of natural resources the commission says in part:

"A considerable part of the export trade of the United States consists of raw or semi-finished materials obtained from natural resources of limited supply. It is urged by many that if co-operation among exporters of such materials is established it will tend to increase the price received for such exports and enable the producers to reduce the wastes of production not only to the profit of the industries concerned but also to the advantage of the public."

The commissioners are optimistic about our foreign trade at the conclusion of the war. They say:

"It is frequently asserted that when peace comes the manufacturers and producers of the belligerent countries will take effective measures to regain their former trade. It is likely, however, that some time will pass after the close of the war before they will be able to exert their normal competitive power."

In the commission's finding of facts it takes up, first, foreign combinations that affect American export trade; second, the need of co-operation in American export trade; third, safeguards of domestic consumers and competing consumers; fourth, and last, the doubt as to the law which now prevents export co-operation. It says:

"The commission has been strongly impressed with the fact that doubt as to the effect of the anti-trust laws operates in many cases to prevent the formation of co-operative organizations for export trade. It made special inquiry as to this matter. More than half of all who replied to the commission's question stated that they understood the anti-trust laws to prohibit combination or co-operation solely for export business, not accompanied by oppressive or unfair practices, and a large proportion replied that they understood the prohibition to apply to organizations of non-competitors as well as of competitors. Moreover, may of these replies were based upon advice of counsel. Other manufacturers, who believed the law does prohibit export combination, went on to say that they were not certain of the matter and would not care to take the risk of joining a co-operative export organization as long as the matter remains in doubt. So far as the commission's investigation showed, there are at present only a few such organizations engaged in export trade, and almost without exception they are limited to a small number of complementary but non-competing concerns. Speaking generally, business men will not invest capital in enterprises the legality of which is doubtful. As a practical matter, therefore, the doubt as to the application of the anti-trust laws acts as a strong detriment to the development of export co-operative organizations.

HEARINGS ON THE WEBB BILL.

Washington, D. C., Dec. 7.—(SPECIAL TELEGRAM)—It has not yet been decided whether there will be any hearings before the senate committee on interstate commerce regarding the Webb bill, which favors the co-operation of business men for export trade. Senator Newlands, chairman of the committee, made this statement today to your correspondent and also added that he was in favor of the bill.

Personal News Notes

L. R. Fifer, of Seattle, Wash., who has been located at that point for many years in the wholesale lumber trade, was in Chicago early last week on his way to Cleveland, Ohio.

A. J. Cross, of the C. L. Cross Lumber Co., 812 Monadnock building, this city, made a trip over across the border to Hamilton, Ont., early this month. Mr. Cross has some good customers in that territory for his specialty, cypress.

Harry R. Bishop, of the Thessalon Lumber Co., Thessalon, Ont., and one of the oldtime Chicago lumbermen, having been for some years trading here as the Claney-Bishop Lumber Co., and associated with the Thornton-Claney Lumber Co., was in town several days last week.

James D. Lacey & Co., with general offices at 332 South Michigan avenue, this city, announce that from December 1, this year, the western office of the firm at Portland, Ore., has been discontinued and that the interests of the Portland office will be consolidated and the several western representatives of the firm brought together at the offices at 626 and 630 Henry building, Seattle, Wash.

R. G. McWethy, for several years associated with E. A. Neufeld, a well known wholesale lumberman of Green Bay, Wis., has lately become associated with the Gill-Andrews Lumber Co., of Wausau, Wis., and will represent that concern in southern Wisconsin, northern Illinois and southern Michigan. Mr. McWethy will make his headquarters at the Republican House, Milwaukee, which will be a central point for the territory the Wausau concern desires to cover.

ATTENTION, MEMBERS OF HOO-HOO.

A concatenation of the Order of Hoo-Hoo will be held at the headquarters of the Lumbermen's Association, Lumber Exchange building, Chicago, on Monday evening, December 11. The concatenation will be preceded by a dinner at 6 p. m. Julius Seidel, of St. Louis, Snark of the Universe and Emerson D. Tennant, secretary-treasurer of the order, are expected to be in attendance. Ten candidates for the ceremonies have already been secured.

Members of the order in Chicago and vicinity are urgently invited to attend and give Snark Julius Seidel, Secretary-Treasurer Tennant and Vicegerent Snark Pomeroy a rousing greeting.

The Baker-Matthews Lumber Co., hardwood lumber manufacturers, of Sikeston, Mo., has opened an office for the convenience of its northern trade at 1216 Fisher building, this city, in charge of J. A. Stannard. This gentleman is no stranger to the Chicago trade, having been for some time associated with Lee Wilson & Co., of Memphis, Tenn., and the Mansfield Hardwood Lumber Co., of Winnfield, La.

A. C. Ramsey, of Nashville, Ark., vice-president and purchasing agent of the Memphis, Dallas & Gulf railroad, was in Chicago, December 1, on a business visit, and made the LUMBER WORLD REVIEW a much appreciated call. While Mr. Ramsey is no longer actively engaged in the lumber business, he maintains very close relations with the industry through his railroad connections by means of which he is in touch with some of the leading lumbermen of the southwest. His many old friends in Chicago, invariably accord him a joyous greeting.

Secretary John C. Knox, of the Michigan Hardwood Manufacturers Association, and E. D. Abbott, sales manager of the Cummer-Diggins Co., Cadillac, Mich., were in Chicago last week Thursday, on their way to Merrill, Wis., to attend the lumber salesmanship congress at that point starting Friday and continuing over Sunday. The gentlemen reported excellent trade in both hardwoods and hemlock among the manufacturers of the lower peninsula, with prices buoyant. They were especially enthusiastic about the work of the salesmanship congress and anticipated a most enjoyable session.

W. T. Denniston, eastern representative of the National Builders' Bureau, with offices at 1835 Transportation building, this city, but with headquarters at Spokane, Wash., and of which concern A. L. Porter, the aggressive secretary of the Western Retail Lumbermen's Association, is at the head, has gone to Spokane to spend the Christmas holidays. He left Chicago Wednesday, November 29, and stopped over Thanksgiving Day in Milwaukee, where he took dinner with his mother and other relatives for the first time in eighteen years.

R. B. Goodman, of the Goodman Lumber Co., Goodman, Wis., who was one of the representatives of the National Lumber Manufacturers' Association on the trip to the Pacific coast and which met with such splendid success, is laboring under a serious handicap because of a broken arm. Mr. Goodman was in St. Paul, Minn., on his return trip and while there fell and broke his right arm. He stayed in the hospital two days and then proceeded to his home. He is now having an opportunity to cultivate the use of his left hand and no doubt, when he recovers from his injury, he will be able to sign checks with either hand and with equal facility.

Ira A. Minnick, the genial president of the National Dry Kiln Co., Indianapolis, Ind., stopped off in Chicago last Thursday long enough to pay the LUMBER WORLD REVIEW a visit and to tell about the wonderful country he had discovered during a recent trip to the unknown regions west of the Rockies. Mr. Minnick left home about the middle of October with the purpose of familiarizing himself with the trans-mountain country and in the seven weeks he spent there he felt amply repaid, having had a most delightful time. Incidentally he closed some fine orders for dry kilns, but he insists this was not the primary object of his journey. His trip embraced the principal lumber manufacturing centers of the Inland Empire, the Puget Sound country, Washington, Oregon and California.

A. R. Turnbull, of the Rowland Lumber Co., Norfolk, Va., was in Chicago December 1, on his return from a trip to the Pacific coast, as an important member of the party of eastern lumbermen who toured the principal lumber centers of the Inland Empire and the coast on behalf of the interests of the National Lumber Manufacturers' Association. Mr. Turnbull stopped over Thanksgiving Day in Minneapolis and had dinner with his mother and other relatives, as is his invariable custom each year. He was very much delighted with the results of the western trip and believes it will be the means of great benefit to all concerned from a business and co-operative standpoint. Reports from the coast are to the effect that Mr. Turnbull made a fine impression by his several well prepared addresses on association work. He is the efficient president of the North Carolina Pine Association, one of the up-to-date lumber organizations of the country.

FIRST ORDER FOR FURNITURE.

Announcement was made December 3 of a South American order to be filled in this country for household furniture, amounting to 60 cars. This is believed to have been the first considerable order for furniture secured from South America since the European war started and it is spoken of as the entering wedge of the American furniture manufacturers in supplanting European furniture in the southern continent. The credit for this sale is given to W. G. McNair, a prominent furniture man, who sold the order on behalf of Chicago, Rockford and Grand Rapids manufacturers. Twenty-five carloads of the order have been already shipped under "red ticket" instructions, which give the right of way over ordinary shipments to the seaboard, thence going to Buenos Aires, Argentina, leaving New York about December 15. The remainder of the 60-car order, amounting to 35 cars, will be assembled in New York for January sailing.

The Baldwin Shipping Co., of Chicago, is the concern making the exportation and that concern states that the starting of the export furniture trade in this initial shipment was an exceedingly difficult matter, but it will make easier the handling of subsequent orders. It is reported that there is another order for phonographs, talking machines and pianos, to be shipped in the near future to South America, which will amount to about $1,000,000.

One of the really remarkable features of the shipment of furniture referred to is that the sale was made for cash, terms that are quite unusual in Argentina, where frequently six months or even a year's time is not regarded as being a long time settlement. In view of this fact the sale for cash was an extremely gratifying feature and it is said that, in addition to this, the buyers agreed to stand the expense of special packing of the goods.

New Concerns

Jonesboro, N. C.—The Jonesboro Sash & Door Co.; $10,000 capital. A. E. Kelly, W. W. Harrington and others.

Elizabeth, N. J.—William R. Worth & Son, Inc., to manufacture and deal in lumber, leather and belting; $10,000 capital. William R. Worth, L. H. Taylor, S. C. Worth, W. H. Hatten, Alexander H. Sands.

Beaumont, Tex.—A. L. Carter Lumber Co.; $100,000 capital. W. T. Carter and A. L. Carter of Polk county; R. D. Randolph, of Harris county; and E. O. Carter and W. B. Landes, of Camden.

Lufkin, Tex.—Collwood Lumber Co.; $5,000 capital. L. E. Wright, B. L. Zeagler and W. O. Griffin.

Fort Kent, Me.—Fort Kent Mill Co.; $1,000,000 capital. Dora A. Bradbury, Miles C. Pinkham, Thomas S. Pinkham, Grover C. Bradbury.

Bangor, Me.—Clifton Land & Lumber Co.; $10,000 capital. Harold F. Ingraham, Charles R. Gordon, H. B. Russ.

Portland, Me.—Gordon River Timber Co.; $400,000 capital.

Carnes, Miss.—Red Creek Lumber Co.; $30,000 capital. J. B. Dorsett, J. L. Holleman and L. L. Magee.

Marianna, Ark.—The Home Lumber Co. J. O. Payne, president; J. M. Hewitt, vice-president; O. G. Norment, secretary and treasurer.

Grand Junction, Col.—Castell Lumber Co.; $25,000 capital. Fred G. Emry, M. T. Castell, A. J. Castell.

Greenville, Miss.—Triangle Lumber Co.; $25,000 capital. W. W. Gary, F. A. Conkling and others.

Louisville, Ky.—The Louisville Veneer Co.; $150,000 capital. Florence E. Kline, D. E. Kline, H. E. Kline and H. E. Snyder, to succeed the Louisville Veneer Mills.

Beaumont, Tex.—F. H. Yeagley & Co., to buy and sell timber, lumber, building material and building supplies; $10,000 capital paid in. F. H. Yeagley, J. H. Reese and T. S. Corriher.

Portland, Ore.—The Pacific Spruce Co.; $5,000 capital. J. T. Alexander, H. G. Dunlap, M. H. Clark.

South Somerville, N. J.—Manville Lumber Co.; $25,000 capital. William B. Epps, Jr., Elmer E. Ball, Z. S. Robbins.

Nicholasville, Ky.—The Roy Lumber Co.; $30,000 capital. James Norton, L. D. Ward and G. A. Roy.

Deer Park, Wash.—The Fan Lake Lumber Co.; $10,000 capital.

Aberdeen, Wash.—The Clear Lumber Co.; $20,000 capital. W. B. Crammatte, D. Yovitt and J. E. Stewart.

Seattle, Wash.—The Packard Logging Co.; $100,000 capital. Osgood Packard, Juval W. Howe and Harold C. Stimson.

Port Townsend, Wash.—The Dosewallips Boom & Driving Co.; $1,000 capital. James O'Connor, E. J. Farrell and Allen Trumbull.

Maynard, Wash.—The Knowles Mill Co.; $10,000 capital. H. C. Knowles, G. A. B. Dovell, George Dorfinger and Nettie E. Knowles.

Vancouver, B. C.—The Fraser River Shingle Co.; $10,000 capital.

Harlowtown, Mont.—The Urner Lumber Co.; $20,000 capital. Benjamin Urner, Marie B. Urner and Charles Barbour.

Goodwin, Utah.—The Gold Hill Lumber Co.; $10,000 capital. F. L. Parker, of Salt Lake; E. J. Warner, of Tooele; W. M. Lamb, of Goodwin, S. L. Billings, of Salt Lake, and William Dougall, of Goodwin.

Tuscaloosa, Ala.—The Trotter-Rankin Lumber Co. C. J. Harmon, J. W. Davenport, A. Trotter and A. W. Rankin.

Jonesboro, Tenn.—The Young Timber & Land Co.; $6,000 capital. W. F. Graham, E. J. Vaugh, W. L. Clark, S. S. Preston, B. G. Young.

Luxora, Ark.—The Alden Land & Lumber Co.; $15,000 capital. Alvin Wunderlich, president; Thomas Denton, vice-president, and George J. Wunderlich, secretary and treasurer.

Gainesville, Ga.—The Gainesville Tie & Lumber Co. J. Lamb Johnston and E. J. Cobb.

Jasper, Ind.—The Schaaf & Schnaus Manufacturing Co.; $10,000 capital. A. J. Schaaf, G. W. Schnaus and Otto Schaaf.

St. Louis, Mo.—The Gulledge Lumber Co.; $100,000 capital. R. V. Hayes, F. A. Goodrich, J. D. Ferguson, J. F. Herd, John A. Meyer, C. J. Trowbridge, A. Berning and E. J. Hart.

Billings, Mont.—The Messenger Lumber Co.; $25,000 capital. Albert E. Platz, J. E. Messenger and G. W. Haskell.

Albuquerque, N. M.—The McKinley Land & Lumber Co.; $10,000 capital.

Asheville, N. C.—The Andrews Manufacturing Co.; $100,000 capital. I. H. Tucker, J. W. Best and J. H. Bentkno.

Oklahoma, Okla.—The Van Deren Lumber & Grain Co.; $10,000 capital. F. A. Van Deren, Edward Spiers and S. K. Bernstein.

Tulsa, Okla.—The Cobbs Lumber Co.; $10,000 capital. L. E. Cobbs, R. B. Cobbs and C. K. Cobbs.

Nashville, Tenn.—The Louisiana Lumber Co.; $200,000 capital.

Putney, Vt.—The Reed Lumber Manufacturing Co.; $2,000 capital. John L. Clark, L. H. Bugbee and B. M. Reed.

Orient, Wash.—The Orient Box & Shingle Co.; $5,000 capital. A. E. Akerly, president; O. G. Barnard, vice-president; D. D. Townsend, secretary; George H. Temple, treasurer, and J. W. Fryett, manager.

Business Changes

Rochester, N. Y.—Chapman & Goetzman have been succeeded by H. W. Goetzman.

Halls, Tenn.—W. F. Wilson has been succeeded by the Wilson-Haas Lumber Co.

Greenleaf, Wis.—M. J. Roach has sold out to the Fuller-Goodman Co., of Oshkosh.

Tomahawk, Wis.—The Tomahawk Veneer & Box Co. has sold out to the Mohr Lumber Co., of Wausau.

Norwich, Conn.—The J. C. Turner Lumber Co., of New York, has bought the lumber plant and property of the H. B. Porter & Son Co., Inc.

Rockville, Ind.—The Graham-Laney Lumber Co. has dissolved, Mr. Graham taking over the interests of the firm. He will continue under the name of the Graham Lumber Co.

Jonesboro, N. C.—The Jonesboro Sash & Door Co., capital $10,000, recently incorporated, has acquired the plant of the Makepeace Sash & Door Co., J. F. Makepeace, manager.

LeGrand, Cal.—J. M. Loiseau Lumber Co. has sold out to the Merced Lumber Co., of Merced.

Albany, Ore.—The Cameron Planing Mill Co. has changed name to the Albany Planing Mill Co.

Mayfield, Ky.—O. S. Wagner has been succeeded by the O. S. Wagner Lumber Co.

Galesburg, Mich.—S. M. Rice & Son have sold out to Zinn & Austin.

Ithaca, Mich.—Alverson & Hannah have been succeeded b E. J. Alverson.

Stringtown, Okla.—Kennedy Bros. have sold out to the Hargrave-Burgin Lumber Co., of Kiowa.

Paris, Tex.—The Wm. Robinson Lumber Co. has sold out.

Port Arthur, Tex.—The Port Arthur Planing Mill Co. has sold out.

Winder, Ga.—The Winder Lumber Co. is now known as the New Winder Lumber Co.

Schofield, Wis.—The Brooks & Ross Lumber Co. has purchased the supply business of G. J. Huhn, of Cliftonville, Wis.

Chippewa Falls, Wis.—The Midland Lumber & Coal Co. has taken over the Chippewa Falls Fuel & Grain Co.

Louisville, Ky.—The Louisville Silo & Tank Co. has decreased its capital to $40,000, the former capital being $60,000.

Evansville, Ind.—The Fullerton-Powell Hardwood Lumber Co. has closed out its yard business here to Maley & Wertz.

New Mills

Lorentz, W. Va.—D. L. Arnold contemplates the erection of a box and crating plant.

Norfolk, Va.—W. P. Cake will build a planing mill and establish a lumber yard, expending about $50,000.

Hartburg, Tex.—S. M. Tomme & Sons will rebuild sawmill recently burned at a loss of $7,500. The mill will have a daily capacity of 30,000 feet of southern yellow pine.

Beaumont, Tex.—The W. A. Stark Lumber Co., of Memphis, Tenn., has plans under way for the erection of a hardwood sawmill.

Mendenhall, Miss.—The Gulledge Lumber Co., of St. Louis, Mo., is building a mill.

Greenwood, Miss.—The Churchill-Milton Lumber Co., of Louisville, Ky., will establish a plant with daily capacity of from 90,000 to 100,000 feet of hardwood lumber.

Transylvania, La.—The Tensas Land & Lumber Co., recently incorporated at Memphis, Tenn., will erect a mill with daily capacity of 35,000 feet.

Clanton, Ala.—The Vida Lumber Co., of Vida, will build a sawmill.

Birmingham, Ala.—The Patton Sawmill Co. will erect a small sawmill.

Talbot, Mich.—James R. Andrews, of Escanaba, has purchased the sawmill, planing mill and town site at this place and will operate.

Moscow, Ark.—W. S. Elder, of Sheridan, Ark., has purchased a tract of timber here and will put in a sawmill.

Lake City, Mich.—Ira Call and Robert Olson have announced that they intend to build a saw and shingle mill on the site of the old Iverson mill.

Marquette, Mich.—The Pioneer Iron Co., which operates a plant at North Marquette, is building a sawmill.

Leesville, La.—The Peavy-Wilson Lumber Co., just organized, will erect a large sawmill near this point.

Fires

Baldwin, La.—The new mill of the Baldwin Lumber Co. burned; loss about $55,000, partly covered by insurance.

Cameron, N. C.—Cameron Lumber Co.'s plant burned; estimated loss $6,000 to $8,000.

Alexandria, La.—Yards of the Ferd Brenner Lumber Co. visited by fire which destroyed 5,000,000 feet of lumber, causing loss estimated at $200,000, mostly covered by insurance.

Bolton, N. C.—The Waccamaw Lumber Co.'s plant damaged by fire to extent of $200,000.

Bristol, Tenn.—Mill of the Bristol Door & Lumber Co. burned; loss $5,000, covered by insurance. Will rebuild.

Washington, Kan.—The lumber yards of the Chicago Lumber & Coal Co. burned; loss estimated at $25,000, fully covered by insurance.

Jacksonville, Fla.—Fire in the Gress Manufacturing Co.'s lumber mill did damage estimated at $175,000.

The News Miscellany of the Lumber World

Central Southern News

MEMPHIS, TENN.

Memphis, Tenn., Dec. 8.—Building operations in Memphis during November showed a handsome increase over the corresponding month last year, the gain being nearly $100,000. This greatly swells the increase in the total for this year as compared with the first eleven months in 1915. There is much activity in building circles now, and prospects are that the showing for December, as well as for the first few months of 1917, will be exceptionally favorable. This view is based on the unusual prosperity of the people of this city and section, and upon the remarkable activity on the part of automobile interests in increasing their facilities here for the handling of business.

The Overland Co. has just completed a building which, with the stock, represents an outlay of more than $250,000, while a number of other automobile manufacturers and distributors are planning large improvements in their facilities here. The Chickasaw Cooperage Co. has advertised for bids for the reconstruction of its big plant recently destroyed by fire, with an estimated loss of approximately $300,000, and these figures must be included when the next report is made public. Planing mill interests are very active, and handlers of building materials have no complaint to make at the moment.

W. A. Waddington, general manager of the Valley Log Loading Co., reports a little improvement in the car situation, so far as the handling of logs is concerned.

• • •

BIRMINGHAM, ALA.

Birmingham, Ala., Dec. 6.—The Pine Belt Lumber Co., southwest of Orrville, Dallas county, sustained heavy losses on Saturday, when its big plant was almost totally demolished by flames. The company lost 340,000 feet of lumber, its sawmill and machinery, valued at several thousand dollars.

The Birmingham city commission discussed for two and a half hours the one-half inch thickness provision of the wooden shingle ordinance. J. H. Eddy of the Kaul Lumber Co., and W. Thornton Estes, of the Estes Lumber Co., were opposed to thirteen other lumbermen in the discussion. The former contended for the retention of the one-naif inch thickness provision in the ordinance, while the others opposed it. Those opposing the ordinance declared that it excluded from use the standard wooden shingle, which is one-eighth inch short of the required one-half inch thickness. Those favoring the provision claimed that the one-half inch thickness was far superior to the other in its fire resisting properties.

The Vida Lumber Co., at Vida, Ala., will construct a narrow gauge railroad connecting with the L. & N. at Clanton or Lomax.

Inland Empire News

SPOKANE, WASH.

Spokane, Wash., Dec. 5.—Spokane soon will become the headquarters for the retail department of the Potlatch Lumber Co., according to plans now under way. F. C. Kendall, manager of the department, will come to Spokane and have charge of the forces here. Palouse has been the headquarters of the retail department of the company since its organization, but due to the constantly increasing business and to the fact that Spokane is a more central location for the general retail offices the change was recently decided on. The company now has 39 retail yards in Washington and six in Idaho and arrangements are under way for establishing a line of yards in Montana. Spokane was also considered advantageous due to the fact that it is central as a railroad point and practically all mail comes through it from Montana and eastern Washington en route to Palouse.

District Forester George H. Cecil, Portland, has announced that, after careful consideration, the secretary of agriculture has approved an increase in the fees to be charged for grazing livestock on the national forest ranges. This increase will be made gradually for the next three years, until the charges reach the point equivalent to two-thirds of the charges made by private owners for grazing stock on their lands.

A shingle mill has been installed near Southwick, Ida., by Ted Roberts. The mill is equipped with the best machinery and has a capacity of 25,000 shingles per day. Mr. Roberts has purchased a large tract of cedar timber and has assurances that his product will find a ready market.

G. A. Carlson announced this week that he had just been awarded a $50,000 contract for building logging roads and taking out logs for the Idaho Block Match Co. near Sandpoint, Idaho. The work is to be completed by April 1, 1918, and the logs are to be hauled to the mill of the company, on the Spokane International railway tracks, at Sandpoint, Idaho. There they will be cut into match length blocks preparatory to being shipped to Saginaw, Mich., to the factory of the Sommers Brothers Match Co., owner of the Idaho Block Match Co.

• • •

KALISPELL, MONT.

Kalispell, Mont., Dec. 5.—The Kalispell Lumber Co., Essex, Montana, closed its sawmill down on November 4, after making a very successful season's run of practically 6,000,000 feet. The mill was constructed last year, and is new and modern in every respect, and consists of a single cutting band. The company has contracted with the government for several million feet of choice timber, tributary to their present site, which will be manufactured into lumber within the next five years.

George W. Slack, one of the leading logging contractors of this district, returned this week from an inspection trip to his logging operations on the Middle Fork of the Flathead river, where he has a contract for the putting in of practically 30,000,000 feet for the Somers Lumber Co., Somers, Montana. A considerable portion of the work this winter has been subcontracted, and will operate about ten camps.

A. E. Boorman, secretary of the Northern Montana Forestry Association, and W. R. Ballord, general manager of the Somers Lumber Co., Somers, Montana, attended the Western Forestry and Conservation Association meeting, and a meeting of the Pacific Coast Loggers Association, held at Portland.

The State Board of Land Commissioners intends putting the farm loan act into immediate operation, pursuant to the decision of the supreme court. The books of the state treasurer's office show there is now available for farm loans, a total of $728,786.20, and it is stated that early in December this will be greatly increased.

C. A. Weil, president and general manager of the Eureka Lumber Co., Eureka, Montana, was elected on the Democratic ticket by a large majority, as a representative of Lincoln county to the Montana legislature this winter.

Middle States News

NEW YORK, N. Y.

New York, Dec. 8.—John D. Mershon, Saginaw, has been in the east lately in the interest of his redwood business. He announced the opening of a Kansas City office, which now gives his company branches in Chicago, Saginaw, New York, Kansas City and Worcester, Mases.

E. B. Este & Sons, manufacturers of North Carolina pine, will shortly move to offices at 362 Fifth avenue, where they have leased the entire ninth floor. Their business has shown constant growth and new and larger quarters are necessary.

Black & Yates, distributors of Philippine mahogany, have opened an office at 341 Fifth avenue, in charge of H. L. Black. The concern will soon establish a general domestic hardwood department, a line in which H. L. Black has long been associated.

The local branch of Hoo-Hoo have selected committees to arrange the details for taking care of next year's annual of the Order.

The lumber trade of the metropolitan district will be out in force for the big dinner in celebration of the thirtieth anniversary of the New York Lumber Trade Association. The affair will be held at the Waldorf, Monday evening, December 11.

• • •

NO. TONAWANDA, N. Y.

No. Tonawanda, N. Y., Dec. 7.—Wholesalers at the Tonawandas did not get in as much white pine by lake as planned this year and their efforts to get it by rail have not met with much success. The difficulty is the shortage of labor in the woods, as well as the great lack of cars. Some of the eastern buyers who depend upon the Tonawandas to supply their needs are much inconvenienced at the great delays in shipments that are occurring.

The largest cargo to arrive at this end of the lakes in 25 years arrived at Tonawanda on December 1st, on the steamer Frank O'Connor. The lumber was for the Wilson Box & Lumber Co. and amounted to 1,500,000 feet. Years ago cargoes of over 2,000,000 feet used to arrive on the Wannipota which was given the name of the floating lumber yard.

• • •

BUFFALO, N. Y.

Buffalo, N. Y., Dec. 8.—Work was begun this week on the Billy Sunday tabernacle at the Buffalo baseball grounds, which was thought to be the most available site. The building is to be constructed principally of Norway and yellow pine, which are to be furnished by Graves, Manbert, George & Co.

The new yard which Taylor & Crate are to occupy on Elmwood avenue is to be one of the largest and most complete hardwood yards in the city, and will also have an office building larger and more adequately equipped than most. New switches are now being laid to the yard and it is hoped to have a good stock of lumber there soon.

Inquiries for industrial locations in Buffalo are reported to be much on the increase, and, according to a prominent real estate man, twenty new industries have announced their intention of moving to this city. A large tract of property adjacent to half a dozen railroad lines has lately been opened up in the south part of the city in order to meet the increasing demand for such locations.

• • •

KANSAS CITY, MO.

Kansas City, Mo., Dec. 8.—During the last two weeks increases in wages at the mills have been announced by the Long-Bell Lumber Co. and Missouri Lumber & Land Exchange. The forced curtailment made necessary by the car situation is proving a hardship to the crews at southern mills. The sawmill employe is not naturally thrifty. During a time when the mills can run but a few days a week it is commendable that the employer has seen fit to increase wages to help the laborer meet the advanced cost of living. The wage increases are said to be especially for the common laborer.

Plans are now complete for what is expected to be one of the most successful district meetings ever held in Missouri. The retailers in the northeastern part of the state will meet December 14 at Moberly, Mo., to discuss trade problems. Among the speakers are J. R. Moorehead, secretary of the Southwestern Lumbermen's Association, and L. R. Putman of Fayetteville, Ark., vice-president of the association and always in demand at lumbermen's gatherings. An unusually attractive program has been arranged.

The Norcatur, Kan., retail yard of the Chicago Lumber & Coal Co. was destroyed by fire November 26. The loss is estimated at $25,000. It was fully insured.

Gulf Coast News

NEW ORLEANS, LA.

New Orleans, La., Dec. 8.—R. H. Downman, president of the National Lumber Manufacturers' Association, who, in company with Charles S. Keith and other prominent lumbermen, recently made a transcontinental trip in the interest of greater co-operation among the nation's lumber interests, has returned to New Orleans, and expresses himself as highly gratified at the results of the journey, which extended to the Pacific coast.

Organization has been perfected at Richardson, Miss., of the Nicholason Lumber & Manufacturing Co., Inc., which will cut 30,000,000 feet of hardwoods, tupelo, magnolia and oak, adjacent to Richardson, in Pearl River county, Miss., and St. Tammany parish, La. A band sawmill of 30,000 feet daily capacity is being built by the company, and the mill expects to be in operation by January 1. A general export and domestic business will be done by the company. A. G. Little, a prominent yellow pine operator of south Mississippi, is vice-president and general manager of the company. The mill is located at Richardson, on the Queen & Crescent railroad.

Organization has been perfected at Lake Charles, La., of the Richards Lumber Co., which plans to construct and operate a sawmill of 90,000 feet capacity at Derry, Natchitoches parish. The company is capitalized at $200,000, with E. Elias Richards, president; T. H. Watkins, vice-president, and Maurice Rosenthal, secretary and treasurer. Edward P. East completes the list of stockholders. The company has almost fifteen years' cut, consisting of a large tract of timber recently purchased from L. C. Black, of Cincinnati.

* * *

BEAUMONT, TEX.

Beaumont, Tex., Dec. 7.—The month just closed showed building permits issued by the city building inspector of $90,000, totaling for the eleven months of the year $841,544, against $685,396 for the entire year of 1915. In considering this remarkable steady building activity, it must be borne in mind that this does not include the many residences constructed in the South Park and French school districts, as residents of that part of the city are not required to take out building permits. Were these populous districts included, the total for the year would run well over the million dollar mark.

In considering the amount being spent in Beaumont for improvements, however, it must be remembered that the new docks, street paving, street railway extensions, run into the hundreds of thousands of dollars and are not included in the above figures. Neither is the wealth added to the city by the acquisition of new commercial establishments and the enlargement of the old ones, which has been quite extensive during the present year.

* * *

HATTIESBURG, MISS,

Hattiesburg, Miss., Dec. 7.—The J. J. Newman Lumber Co. which operate large mills in this city and at Sumrail, Miss., cut off the night runs on December first and will not put them back on until they are able to get sufficient cars to take care of their output.

The Lamar Lumber Co., Clyde, Mississippi, who have been operating their large mill on double shift for the last three years, cut off the night run December 1st on account of the car shortage.

The site committee of the Hines mill at Gulfport has made arrangements to have the standing timber on the Hines mill property cut off, and to that end have arranged to have a portable mill begin at once the sawing of the standing timber, so that when the Hines Lumber Co. is ready to begin building its large steel mill the ground will be ready.

The Gulf and Ship Island railroad will have a survey of its branch which will be built from Kiln, Miss., to Ten Mile on the main line of the Gulf and Ship Island, completed within a few days and actual construction will begin.

Northern States News

MINNEAPOLIS, MINN.

Minneapolis, Minn., Dec. 8.—The annual convention of the Northwestern Lumbermen's Association will be held in Minneapolis, January 16, 17 and 18. Business sessions will be in the assembly room of the courthouse and a lumber products exhibit will be in Arcadia Hall, adjoining the courthouse.

State Forester W. T. Cox, after journeying several weeks from one lumber camp to another in northern Minnesota, is authority for the statement that 14 varieties of pie are being turned out by the camp cooks. Even pie for breakfast is not sufficient inducement to get all the able-bodied men needed by some of the logging contractors.

The Alger Smith Lumber Co., Duluth, is operating a sawmill on Rice lake, having started in December 1 for the winter run with a crew of 400 men. Seven lumber camps have been established and logging operations are under way for the winter input of logs.

The high price of paper, added to the fact that this is the age of small packages, has increased the demand for boards suitable for boxing and crating. Box factories have been picking up about all the low grade lumber available. The high price of foodstuffs has caused manufacturers to find a greatly increased outlet for package goods, hence the heavy demand for boxes and crates.

A. D. McDonald, recently connected with the Salt Lake City office of the Eastern & Western Lumber Co., Portland, Ore., has succeeded I. N. Tate as sales manager of the H. B. Waite Lumber Co., Minneapolis.

The Eureka Silo Co. has established a Minneapolis office at 528 Lumber Exchange. The office and territory is in charge of C. H. Shaver, who says it is the intention of his company to sell its double walled silos through retail lumber dealers.

New England News

BOSTON, MASS.

Boston, Mass., Dec. 5.—A leading lumberman in discussing the trade situation today, said to a representative of the LUMBER WORLD REVIEW: "I spent two weeks on a trip up to our timber limits on the Upper Ottawa river during the past month, and everywhere I went and in all talks with the various people I met, it was impressed upon me that the cost of supplies and materials of every kind which would be put into lumber camps as well as the wages being paid to the men this year, were advancing very rapidly, and even with these advances it was very difficult to obtain the necessary labor required.

"For instance, last year the majority of our men going into the woods were paid $27 per month and board, of course. This year they were paying $40 when the writer was up there and we are probably having to pay as high as $45 at the present time. Even then we were nearly 30 percent short of the required number of men needed.

"A large number of able-bodied men in Canada have undoubtedly enlisted and have either gone or are going over to the continent to fight with the allies. Whereas, there are no men to speak of going from the states in this cause, nevertheless, the labor situation is just about the same as it is there. We think the volume of business is very large, here in this section at all events, and it would be much larger if the transportation facilities did not put on a very material curb."

Ohio Valley News

EVANSVILLE, IND.

Evansville, Ind., Dec. 8.—Edward C. Kerth, city building inspector for Evansville, in his report for this year shows that the amount of money expended for buildings in this city for the present year will reach the sum of $1,600,000, including those which will be finished by the first of next year.

The Elkhart Carriage and Motor Car Co. at Elkhart, Ind., has increased its capital stock from $100,000 to $300,000.

A few days ago the Whitmer Handle Co. at Mt. Vernon, Ind., received a big consignment of hickory lumber from lower Ohio river points. The lumber was brought to Mt. Vernon in barges.

One large concern here has been shipping a great deal of one-inch walnut to the British government and it will be used in the manufacture of aeroplanes. It is predicted that walnut will move freely for some time to come.

Crop conditions in this section are good, the new wheat having a good stand, although at this time it is badly in need of a good rain.

The various wood consuming factories in Evansville and many of the cities in southern Indiana and western Kentucky are being operated on steady time and many of the manufacturers still report that they are having a hard time getting all the labor that they want. Furniture and chair fac-

The "Human Element" Risk at Its Lowest in Lacey Reports

Out in the woods for six weeks or more at a stretch, how can any amount of scientific method overcome in LACEY REPORTS the always incalculable element of human weakness or turpitude?

Everyone knows that Lacey & Company have overcome it—but how?

First, by treating each man on his merits as a human being, not expecting the physically less strong to cover as much ground per day as the strongest; allowing every man to return to camp at will whenever fatigue impairs his accuracy (of course weeding out instanter all who take advantage of the privilege), in short, by putting in each man's mind accuracy first.

Second, by continual "random" checking of each man's work by our most experienced and reliable woodsmen. A cruiser never knows when his results are to be checked and the checker often does not know whether he is checking or doing original work.

This is one factor in the near approach to perfection of a LACEY REPORT.

Send for our interesting booklet.

James D. Lacey & Co.

CINCINNATI, OHIO.

Cincinnati, O., Dec. 8.—The Mowbray & Robinson Lumber Co. recently started survey work for the building of a new logging railroad to open up vast timberland holdings of their concern in Leslie and Clay counties, Kentucky. About 70,000 acres of thickly wooded timberland will be opened up by the new road, which will be about 50 miles long, connecting with a division of the Louisville & Nashville. Construction work will be started early in the spring, it is said. The company also announces that two or three large sawmills will be built on the properties.

Keen interest is taken in the local market over the announcement that the Haskell & Barker Car Co. is in the market for about 6,500,000 feet of lumber and the American Car & Foundry Co. needs about 4,500,000 feet to fill large equipment orders from the Great Northern Railway. Douglas fir and yellow pine are the principal species to be used, although considerable southern hardwood also will be used.

Creditors of the McFall-Heyser Lumber Co. last week instituted involuntary bankruptcy proceedings against that prominent concern, alleging that the company is insolvent.

The Sayres & Scoville Co., one of the pioneer carriage manufacturing concerns in the middle west, also manufacturers of commercial and pleasure automobile and specializing in automobile ambulances and hearses, last week announced plans for greatly enlarging the scope of its business. The capital stock of the concern will be increased from $150,000 to $650,000 and a great new factory building will be erected on Spring Grove avenue, in Winton Place.

West Virginia coal and lumber operators reported the last few days that the car situation was considerably relieved, especially in regard to coal cars, although not sufficiently to warrant any lowering in price at this time. Lumbermen in the great West Virginia timberlands are getting hold of cars with less difficulty than for many weeks, although the situation still is acute.

• • •

LOUISVILLE, KY.

Louisville, Ky., Dec. 6.—The demand for interior trim has been excellent all fall with the Louisville lumber dealers, and building operations have shown steady increases. A glance at the building permits for November show a decrease of 25 in number, and an increase in value of $136,990. In November, 1916, a total of 141 permits were issued for buildings to cost $364,710, as compared with November, 1915, when 166 permits were issued for buildings to cost $227,720.

The Kentucky Fire Underwriters Association, and the Kentucky Fire Prevention Association, in session in Louisville last week, went on record as strongly opposing the use of shingle roofs and adopted a resolution condemning the use of such roofs, claiming that they had been responsible for general conflagrations, and calling attention to the fire at Nashville, Tenn., early in the year, when it was alleged wind-blown shingles crossed a space 1,800 feet, setting fire to other shingle roofs.

The Churchill-Milton Lumber Co., Louisville, has completed arrangements for a new two-band sawmill at Greenwood, Miss., where the company will be located with two river and two railroad connections. Switches are now being run into the property, and the construction of the mill started. Most of the machinery has been purchased. The company also operates a plant at Glendora, Miss.

The Norman Lumber Co., Louisville, has completed a new department for manufacturing box shooks in connection with its poplar lumber manufacturing business.

Pacific Coast News

TACOMA, WASH.

Tacoma, Wash., Dec. 5.—The sudden spurt in the shipbuilding industry is expected to make Tacoma the headquarters of the shipping world on the Pacific coast. The Todd Co. plans the construction of a huge drydock and repair shop capable of accomodating the largest vessels operating on the Pacific.

T. E. Ripley, president of the Wheeler-Osgood Co., will return to Tacoma about December 10, after several months spent abroad. Mr. Ripley visited France and England and has made valuable business connections in these countries which will be useful after the war. When last heard from Mr. Ripley was in Los Angeles.

The Keystone Lumber Co. of Tacoma has announced plans for the construction of additional buildings at its plant. The demand for local building material, according to officials of the company, has more than doubled during the past few months, and necessitates the firm's securing more space.

A. J. Earling, president of the Chicago, Milwaukee & St. Paul Railway, visited Tacoma, November 29, and announced that the road would start immediate construction on 1,000 new freight cars. A large proportion of these will be built at the company's Tacoma shops and the material supplied by local mills. Mr. Earling also inspected the new Milwaukee docks in Tacoma and declared that the road would soon have to start building more such structures, as the present demands of the Oriental freight traffic make the space now available inadequate.

• • •

CENTRALIA, WASH.

Centralia, Wash., Dec. 5.—E. H. Lester, of Montesano, will start logging operations on the North river in the near future. The camps are already established in the vicinity of Vesta. Mr. Lester has bought between 9,000,000 and 10,000,000 feet of timber and has options on 150,000,000 feet additional, which he expects to close. Mr. Lester has not decided whether he will construct a railway line to connect with the Oregon-Washington or whether he will put the logs into North river and send them by water to Primo, there to be loaded on the cars.

A new shingle mill to cut in a large tract of fine cedar is now under construction on Joe creek, near Pacific Beach. The name of the company building the mill is the Joe Creek Shingle Co., and Mr. Campbell of Seattle is one of the chief promoters of the enterprise. The mill will have two of the latest pattern shingle machines. The tract of timber in which it is located is sufficient to keep it steadily in operation for a number of years.

Articles of incorporation were recently filed by the Skookum Lumber Co., a $200,000 corporation that has taken over the Blumauer mill and timber in Tenino.

• • •

SAN FRANCISCO, CAL.

San Francisco, Cal., Dec. 4.—The San Francisco Retail Lumber Yards Association has been formed with a membership of thirty yards for the purpose of bettering trade conditions. The association is working to establish a more ethical method of doing business than has been the custom in the past when mills have sold lumber to unreliable middle-men who carried no stocks and who maintained no offices. Mills have frequently been unable to make collections and contractors have been called upon to wait weeks for orders shipped from outside points that could have been filled within a few hours at local yards. The committee that has been getting the new organization in working order consists of M. A. Harris, of the Van Arsdale Lumber Co., Arthur Hooper, of the Hooper Lumber Co., R. A. Hiscox, of the Hart-Wood Lumber Co., and J. H. Kruse, of J. H. Kruse & Co.

A crew of timber cruisers has been working on the holdings of the Pennsylvania Lumber Co., near Susanville, Cal., and it is anticipated that a mill will be erected there at an early date.

The Eureka Box Co. is preparing to commence operations at Eureka, Cal., and will make box materials and mouldings. W. Y. Crane is president of the company, P. McKenzie is secretary, and J. E. Shields is manager.

• • •

ABERDEEN, WASH.

Aberdeen, Wash., Dec. 4.—A. A. Haskins, who has just finished the sheds at the Grays Harbor Shipyards, under which the keel of the newest of the vessels to be built there already has been laid, has taken a contract for the erection of twin sheds at the Aberdeen shipyards, commonly known as the Peterson yards. The sheds will be 120 x 300 feet over all and will be of truss span construction.

The steam schooner Idaho, the property of the Wilson Brothers' mill at Aberdeen, was launched at that place November 28. The Idaho is the sister ship to the Oregon, launched several months ago. She is 225 feet overall, 41 feet 6 inches breadth of beam and 14 feet 8 inches depth of hold. When put into service the Idaho will be in the lumber trade between Grays Harbor and California ports.

Digitized by Google

The Current Trend of the Lumber Market

General Market Review

If the prosperity of the lumber trade is at all dependent upon the indicated building operations of the country, there would be little to complain of, as building operations in 1916 will probably equal, if not exceed, that of any year of which there is record. This will be the case in Chicago, at least, which, in 1911, presented a total value of building permits of around $110,000,000. Up to December 1, this year, the total building permits of Chicago were valued at $105,000,000, and the estimated value of building permits for December is $8,000,000, making a total for this year, according to present prospects, of $113,000,000, which will be by far the heaviest year for building operations in the city's history. Strange to relate, this large showing had not exercised any favorable influence upon the lumber business until this fall, local trade during the first nine months of the year having been only indifferently good. During October and November the demand upon the retail yards of the city and suburbs has been unusually heavy, and still continues.

A similar condition is shown at most of the consuming centers throughout the country, and the movement of lumber, although belated and reaching measurable proportions only after every other industry in the country had shown a maximum of activity, is now fair, without being considered at all unusually heavy. Probably it would not have been of any consequence whatever as to volume had there not been developed the greatest car shortage in the history of the country, which, in turn, has caused the heaviest orders for freight cars in November ever known in a single month.

To offset the car shortage there are several activities under way. Among them is the effort on the part of the railroads, aided by the Interstate Commerce Commission, to expedite the loading and movement of cars, and a real effort on the part of lumbermen to aid in their rapid unloading and reloading. Another alleviation is found in the heavy orders for equipment placed in November, which totaled the unprecedented figure of 56,530 freight cars, costing the enormous sum of $83,000,000. There are also strenuous efforts being made by the railroads to repair their rickety equipment, which, in many cases, has been used up to the very last moment it would hold together. Although there are occasional evidences of a better supply of cars in one or two sections of the country, it is likely that the car shortage will not be fully relieved before the first of the year, if then.

Lumber is not overplentiful at points of consumption, and, because of inadequate shipping facilities, production has been curtailed at most of the sawmills in the four principal producing territories. There has been a more insistent demand for lumber as the available supply decreased and this has resulted in some improvement in values, notably in southern pine and cypress, one item of the latter wood having been advanced $2.50 within the last two or three weks. Firmness has also been shown in plain oak, whil hardwood flooring has displayed a renewed upward tendency, owing to unusually heavy demands for the completion of buildings.

There are not wanting signs of a decline in the munitions demand. It is reported that the allies have built up facilities of their own, and that contracts have lately expired in Rochester, N. Y., and in Dayton, O., as well as at other points, resulting in the discharge of men and a reduction of wages, with the explanation that there are no more munitions contracts in sight. It is believed that there will be many instances of this kind this winter, and this will be a factor in the restoration of normal car supply.

NORTHERN AND WESTERN PINE.

Handlers of northern pine report that they are overwhelmed with orders for all grades and thicknesses, and for the lower grades, as well, which, until recently, have not been the most active item. Uppers are in excellent request, and stocks are not heavy. Shop lumber is inclined to scarcity, and sales are made around $52 for 5-4 and 6-4 No. 1 shop, $42 for the same thicknesses in No. 2 shop and $32 for No. 3 shop. Western pine, which includes the eastern California product, has been selling around $41 for No. 1, $35 for No. 2 and $25 for No. 3. California sugar and white pine stocks have brought slightly better figures than those named. Inland Empire stocks are considerably out of assortment, and because of car scarcity are not being forwarded in quantities desired. The demand for pattern stock is unusually good, and factory plank is also in good request in all markets.

NORTHERN AND SOUTHERN HARDWOODS.

There is a pronounced awakening in the hardwood trade, due in large measure to the scarcity of cars. There are empty places in the consuming stocks of the north and east which are in crying need of replenishment, and there is a steady consumption in furniture, automobile, aeroplane, interior woodwork, moulding and general building lines that has evidently been necessitated by the exceeding long period during which buying for most of these industries has been practically suspended. It will require, no doubt, considerable hardwood lumber to replenish these depleted stocks of raw material, and so far as can be learned there are not only insufficient stocks of dry lumber to supply this want, but transportation facilities are so wofully lacking that were the lumber available there would be little that could be shipped.

It is evident that the oak industry is not to be neglected with impunity. That a time could ever arrive when oak would be put out of business as a staple hardwood is now looked upon as improbable, whereas, before the recent formation of the oak manufacturers' association, it was felt that almost anything could happen. Within the last month there has been a decided revival in oak demand. Not only have sales increased, but prices have strengthened, and quotations are now heard of on the basis of $52 for firsts and seconds inch, $34 for No. 1 common and $26 for No. 2 common, Chicago delivery.

Gum may be considered as one of the most active woods in the market. Demand is becoming constantly more difficult to fill. Shippers from the south report that they are getting from $37 to $38 for firsts and seconds red, and $24 to $25 for No. 1 common red. Sap gum has been in somewhat better request lately, at $27 for firsts and seconds, and $23.50 for No. 1 common. Considerable white ash is going into aeroplane and automobile stock, and prices are firm. The demand for poplar has improved, all grades being in fairly good request in this and other northern markets. Of the northern woods, birch, the leader, is now quoted as high as $48 for firsts and seconds. Sales of No. 1 common have recently been made at $28 to $29 and of No. 2 common around $20 to $21. Basswood is being taken hold of by piano manufacturers to some extent, but neither demand nor supply are heavy, although there is a place for practically everything on hand at satisfactory figures, firsts and seconds selling around $40. Stocks of 1¼-inch to 2-inch are virtually exhausted. Maple is one of the difficult woods to find, especially in thick stock, which has developed a pronounced scarcity. Recent quotations are around $49 to $50 for 2-inch firsts and seconds and $38 to $39 for 2-inch No. 1 common.

SOUTHERN PINE.

Acording to the most reliable information, obtained from the report from 154 mills at the date of December 1, there is a somewhat better supply of cars available at southern points, and shipments are slightly ahead of the production, a situation which has not been witnessed in any week, with one exception, for several months. Some of the yellow pine plants have been forced to close down for want of piling room, and, so far as has been reported, there is no concern manufacturing yellow pine which is getting much over 50 percent of its empty car requirement. In fact, it may be safely said that the industry, as a whole, is not getting anywhere near one-half of the cars it needs. This is creating great inconvenience to manufacturers, as well as to wholesalers and consumers. In the very nature of things, any stock that can be delivered commands an excellent price, and values have been advanced steadily, until now there is scarcely any item of dimension which is selling under a discount of $4.50 from the established list. In dressed lumber the position is equally strong with advances on practically every item, especially in car decking, car siding, car roofing and other items of car material. The immense number of freight cars ordered during November, breaking the record of any month in railroad history, insures a continued strong demand for southern pine through the winter.

CYPRESS.

The cypress mill representatives in Chicago territory, as well as in other districts, report active demand for all classes of material. Lately there has been considerable tank stock in the inquiries, and washing machine manufacturers are taking more than their usual requirement. Mixed cars are conspicuous in the wants of the retail trade. Many of the retailers have refrained from buying with the idea that prices would ease off to some extent, but this hope has been futile, and there now seems little likelihood of any relaxation in the market, even during the usually dull period around the holidays. Prices have lately advanced, as reported two weeks ago, and are holding strong at the advance, but the policy of the cypress manufacturers is not to encourage any sharp fluctuations in the price of their commodity.

NORTHERN HEMLOCK.

The manufacturers of northern hemlock have been enjoying a few weeks of the most prosperous conditions that have attended that industry for several years. Owing to the car shortage and resultant scarcity of yellow pine at northern consuming points, and, further, owing to the fact that the scarcity of cars has not been so pronounced at points of hemlock production as in many other localities, hemlock demand has penetrated into a good deal of its old territory in Illinois and Indiana, to say nothing of its natural distributing fields in Wisconsin and Michigan. Prices on hemlock have advanced to practically list, and some items have been lately selling at 25 and 50 cents above list, which might be regarded as a most notable event. Stocks of hemlock are very much out of assortment, and, of course, cannot be replenished to any extent before spring. This lends to the market a pronounced strength.

SHINGLES AND LATH.

Transit cars of red cedar shingles, especially of clears, are not in the best demand throughout Chicago territory. A good many of these, however, are available, and many buyers are content to order on regular delivery, which naturally does not mean much, as the car shortage is as pronounced in the Pacific northwest as in any other part of the country—if not worse. The peculiar situation in the coast country on cars and shingle stock causes a rather sensitive market where eastern delivery is concerned. Sales were made this week Friday of clears on the basis of $3.31, and of stars at $2.82, but transactions are likely to be made on a spread of from 3 to 5 cents in either direction from these quotations, sometimes more. Northern white cedar shingles are in fair demand, and prices are well maintained. At latest quotations available the market is about $3.35 for extras and $2.55 for standards, delivered in Chicago territory.

Gulf Coast Markets

NEW ORLEANS, LA.

Conditions in the New Orleans market are described as follows: "Yellow pine continues to show a very substantial condition, in spite of the serious inconvenience to business occasioned by the car shortage, and the fact that stocks are accumulating in yards to a considerable extent. Interior demand is strong, though lack of tonnage and further restrictions on shipping have tended to restrict export business, conditions now being about as they were last re-

The Lumber World Review

608 South Dearborn St. Chicago, Ill.

ported in these dispatches. Prices average approximately $1 over thirty days ago. Even higher prices are offered for guaranted prompt deliveries, but few mills are able to take advantage of this.

"Many mills in Louisiana and Mississippi are cutting off their night shifts, while others are suspending operations one or more days a week. A few are out of the market altogether. Quotations are especially good for finish and dimension, which are steadily advancing. Much railway business has been placed here recently.

"In the cypress field, despite the fact that this is the fag end of the season, a good tone is shown by the market, with a steadily rising scale of prices. During the last fortnight all items in a finish have been put up at least $2 a thousand. Other items are up 50 cents to $1. Little if any improvement is noted in the car situation. Manufacturers are averaging about 50 percent of their requirements, some claiming to receive only about 25 percent.

"Good woods conditions are enabling logging operations to proceed in a satisfactory manner.

"As has been the case for some weeks, gum continues the leading item in hardwoods. Market conditions are fairly satisfactory, with prices firm on all items. An unusually large number of inquiries have recently been received, especially from the factory trade. The factories have been the backbone of the market for the past several months. Export buying shows little change. A fair volume of business is being handled for Central America and the West Indies, though Cuban trade has fallen off somewhat, due, it is believed, to overstocking. Like all other branches of the lumber industry, hardwood mills are suffering from inability to obtain an adequate amount of rolling stock."

* * *

HATTIESBURG, MISS,

The effect of shortage of cars on southern mills is shown by this report: "If cars were plentiful the mills in this section would be doing a record business as orders are plentiful for all classes of cutting with average prices up two to three dollars a thousand. The car situation is still very bad and all of the mills that have been operating on double shift have pulled the night runs off and will only operate day time until the car shortage is entirely relieved. Those running on one shift only are not making any effort to operate full time as they are practically blocked out with lumber and it will be hard for them to operate thirty days longer if the car supply is not increased.

"Weather conditions have been ideal for several months and logging has been done at a minimum expense.

"Car material continues in excellent demand at good prices. Dimension continues one of the leaders and planing mill stocks have shown a substantial advance in price. Timbers of all kinds are easy to sell. Sawn timbers have been in good demand for the last sixty days and mills close to the ports are cutting that class of stock as they are able to make shipment in quicker time than stock going north. Buyers are still having a great deal of trouble as the mills keep well loaded up with orders and will not take on additional orders with no prospect of shipping them before they are overdue.

New England Market

BOSTON, MASS.

A manufacturer and dealer in spruce writes us from Boston as follows: "The present condition of the spruce lumber market is going through a period such as never was seen before. We are actually selling spruce dimension at the highest in its history and it looks to us as though the present conditions would prevail for the immediate future at least.

"We should not care, however, to place ourselves on record regarding predictions for the year 1917, though we hardly see how lumber will sell for any less price for some time to come."

* * *

A prominent lumberman of Boston writes us of general conditions as follows: "As for an opinion of the present lumber market and the prospects of the immediate future, would say we believe the lumber market today is very active, as far as it can be, considering the great lack of transportation facilities. We think the lumber market has been realizing gradually for the last two or three months what an exceedingly costly job it was to get lumber out this year in the woods, and they felt they would have to do their utmost in order to obtain enough advance in their lumber prices to cover this additional cost of manufacture.

"We think the yard men are stocking up very heavily as they are apt to do on a rising market, feeling each time the price goes up they ought to buy earlier, and that buying even now they will save something from what they would have to pay a little later when they need the stock. Of course, an advance in one place tends to cause an advance in another and so it goes from industry to industry, and the lumber has felt the results in the past six months, where earlier in the season it seemed to be one of the few commodities which was not very materially effected. The indications as far as we can see are for a continued advance for some little time yet.

"Of course, it would be a very wise man that could tell when inflation got to such a point that the country woke up to the fact that it was working on a very unsafe standard, but that will come we believe as it always has in the past. There will be a time when the general mercantile community will begin to feel it is altogther too hazardous to continue purchasing commodities in advance of their requirements at continually advancing prices. When they fully realize this then there will be a lull and we are afraid everyone will have to stand his losses and prices will go down much faster than they went up. It seems to us, however, that for the next year or six months at least there is no likelihood of a cessation in the demand for our products in Europe, and that for the present at all events, if we can obtain transportation facilities and move a large amount of goods out of this country and increase our wealth by so doing we have not come to a point yet where the sentiment will tend to check this advance. But we should feel that people who have to buy a year's supply ahead as many lumbermen do during the winter and early spring, should hesitate a little and be cautious about what conditions may be in the latter half of the coming year.

"Speaking as regards the conditions between now and the first of the coming year, would say we think that people who buy at once will be on the right side, but of course, in purchasing or doing a general lumber business, most of the lumber community have to consider the market for a good deal more than the coming month."

Inland Empire Markets

KALISPELL, MONT.

This letter from the Inland Empire shows conditions in most respects satisfactory: "While the demand is strong and a considerable amount of business is booked for immediate shipment, shipments are seriously handicapped as a result of a car shortage. During the past 30 days only about one-third of the requirements for empties for lumber loading have been furnished by the railroads, and from all indications, there will be no immediate relief in the car situation during the next 30 or 60 days.

"Prices are quite satisfactory, and sharp advances are expected on practically all items within the next 10 days.

"The mills throughout the district have discontinued operations for the season, the majority of them having manufactured all their available logs. The manufacturers are going into the winter with about normal stocks, which, if the present demand keeps up, will be greatly depleted by the opening of the 1917 sawing season."

Southwestern News

CROSSETT, ARK.

A manufacturer of Arkansas soft pine writes us as follows: "While our viewpoint and opinion about the lumber market could not be considered a criterion, as we are practically out of the market, we have sufficient bona fide business offered us daily for present and future shipment that exceeds our normal cut; but about 85 percent of this we are returning, as during the continued car shortage we have increased an order file that will take us well into the spring months. Our salesmen report broken stocks among the dealers to even a greater extent than the surplus stocks at the mills. The latter is not going to be a very great factor, as most mills are limited in their storage capacity, and are forced to involuntary curtailment if car supply is not in keeping with the normal capacity of the mill.

"As to prices, these are being well maintained, and if one were inclined to take advantage of the

Digitized by Google

present situation he could easily get from $2 to $3 a thousand above what we consider a reasonable price based on the normal supply and demand."

* * *

KANSAS CITY, MO.

A manufacturer of yellow pine writes us from Kansas City as follows: "We've long since given up any idea of being a prophet on the lumber situation. At the present writing, there is nothing in sight but high prices and more business than can be taken care of.

"This situation can hardly change with the car supply as it is and after that is increased it would probably take sixty days for the mills to ship out their accumulation of unfilled orders. So from the manufacturer's point of view, apparently, there is not much cause for worry for at least sixty days; and by that time we should be on the verge of spring trade."

Conditions in the Kansas City district are reported as follows: "The yellow pine market is exceedingly firm here with some items quoted from 50 cents to $1 on the average. This does not take into account exceptional sales that are contingent upon prompt delivery and are made at such bullish figures that they do not fairly represent actual market conditions. The opinion expressed here two weeks ago was that there would be no radical decline in price even if the car situation should be miraculously ended. The prediction most generally heard is that the scarcity of cars will persist after the first of the year and that even when it does end the mills will be so far behind with orders and retail stocks will be so depleted that high prices for yellow pine will continue.

"Cypress is still in excellent demand and like yellow pine the volume of business is only limited by the railroads' ability to furnish cars.

"West coast woods continue strong and the supply limited, and hardwoods are moving well here at steady prices."

Pacific Coast Markets

TACOMA, WASH.

The Tacoma market is thus described: "The local lumber market continues strong and the demand from the eastern building centers is holding up well. Despite the predictions of relief made by railroad men the car shortage is still extremely serious and most sales are being made subject to delay in delivery. Local manufacturers agree that prices are higher than would be the case if the normal supply of cars was available, as the mills which are able to get out shipments can practically name their own price for lumber.

"Orders are accumulating at the mills and most of the manufacturers are holding back on production for fear of a surplus of lumber stocks when the car shortage ends.

"The offshore market shows some improvement and several large cargoes have gone out of Commencement bay during the past two weeks.

"Shingles are still holding up well and prices are at the highest point in years."

* * *

SAN FRANCISCO, CAL.

We have received this report from our correspondent in San Francisco: "A fair volume of business is now being done by San Francisco retail yards, the situation having been cleared by the recent settlement of the strike of stevedores. The strike commenced in June and fourteen of the twenty-four yards of the city were affected, almost one thousand men being out at one time. The men have voted to accept the terms of the employers and to go back to work under the terms in force prior to June 1.

"The car shortage has become acute and everything in the nature of rolling stock is now being pressed into service. The orange crop in central and northern California, where the early fruit is grown, is being harvested, but sufficient cars cannot be secured to move it. Growers and packers ordered box shooks early in the season and have sufficient stocks of this on hand but cannot move the crop as desired. Canned and dried fruit packers have managed to secure enough box materials but are fully two months behind with deliveries. Finished lumber products, such as doors and sash, flooring and the like are being shipped in open flat cars at shippers' risk but so far weather conditions have been such that no damage has been done to goods in transit.

"Lumber prices remain much the same as they have been for several months, advances being made only when transportation rates become higher. The unusual amount of home building in the San Francisco Bay district, and particularly in San Francisco, is resulting in a good demand for finish lumber, including hardwoods, and these grades are in a stronger position than the common lines.

South Atlantic Markets

NORFOLK, VA.

A leading manufacturer of North Carolina pine in a letter to us expresses these views: "The embargoed New England points are again being opened by the railroads, and all other conditions, except the labor proposition, are favorable and apparently are becoming more so from day to day.

"The demand for lumber and shipments thereof are in excess of production, and if the embargo does not tighten up all around it is my honest conviction that the shipments between now and January 1 will exceed the cut, and even after that date I believe said condition will not be changed because of the fact that a necessary curtailment in production will follow through unfavorable weather conditions and a more marked shortage of labor.

"From my observation, the lumbermen have no disposition to crowd their prices to an unreasonable point. It is true that prices have been stiffening during the past three months and still have an upward trend, but there is yet a considerable margin between the prices at the present time and the point where reasonable profits are secured.

"The spirit of co-operation on the part of the lumber manufacturers is a very important factor and with continued and increased confidence displayed by the lumbermen, each in the other, I see no reason why the situation cannot be managed in the future more along the lines of 'genteel business' with reasonable profits, than following the custom which has for so many years existed, namely, the slashing of prices without regard for the other fellow's feelings or ability to stand the grind.

"The future looks brighter to me than it has for a good many years and unless I am a poor reader of the signs of times, 1917 will prove a banner year for the manufacturers."

* * *

JACKSONVILLE, FLA.

These opinions on the market come to us from one of the leading lumbermen of Florida: "We believe that present values have been brought about by a healthy demand and in sympathy with general improvement in prices of all commodities, although as usual lumber is about the last thing to enjoy such advance.

"However, we believe that the existing car shortage and the consequent curtailment of shipment has had some effect on prices, and it is possible that a rapid betterment in car service might have a depressing effect on the present market. From our point of view we can see no immediate prospects of betterment, at least not for the balance of the year, and while unfavorable weather will have its effect on buying we believe the buyers are impressed with the fact that the present market contains elements of strength that were lacking a year ago and that the likelihood of a slump in prices following the beginning of the new year is not as great as it was last year.

"We are finding the improvement in demand and prices, and in the volume of inquiries from all sources, export included, and with general conditions remaining as they are we can see no good reason to expect anything but favorable conditions in the lumber trade for the balance of this year, and for the first quarter of the new year; however, this is a period of sudden changes and it will be well if the manufacturers are not too optimistic and advance prices too rapidly."

Northern States Markets

CADILLAC, MICH.

A manufacturer of northern hardwoods and hemlock writes as follows: "Our opinion of the present lumber market and the prospects for the immediate future depends upon some conditions which cannot be foreseen at this time. The indications are, however, that the car shortage will continue during the present month at least and that the shipments of southern pine into this territory will be thereby restricted. promotes the movement of hemlock, but on the other hand we are approaching the end of the year and dealers are likely to buy for immediate needs only unless they feel that prices after the first of the year will be higher and stock difficult to obtain. We think that some hemlock sales are being made for the latter reason.

"The demand for Michigan hardwoods is very good and basswood, elm, beech, maple and birch are selling freely at advanced prices. In our opinion the hardwood lumber market is strong and will continue to be so for several months.

"The hardwood flooring demand is good and stocks in manufacturers' warehouses are less than normal. On account of small stocks, increased production costs and an increasing demand we look for a material betterment in flooring prices."

• • •

MINNEAPOLIS, MINN.

Activity in the Minneapolis lumber market is reported as follows: "Current demand for northern pine and hemlock is unusually heavy for this time of the year. In addition to immediate orders, which are being shipped as promptly as cars can be obtained, inquiries and even orders for deliveries early next year are running high. Prices have advanced several notches in the last month, but owing to scarcity of laborers in the northern woods, linked with the high cost of camp supplies and big wages being paid, retailers feel there will be no letdown on prices next spring. Building operations in city and country are active, owing to mild weather. Factory demand for box and crating material has about cleaned out some of the manufacturers. Mills report that general stocks are becoming low and that the drain is especially heavy on Nos. 1 and 2 common dimension and Nos. 3 and 4 boards.

"Buyers are in the market these days for practically all kinds and grades of hardwoods, northern and southern. Building activity has lowered stocks of flooring and maple, birch and oak are in good demand.

Middle States Markets

NEW YORK, N. Y.

A lumberman writing to us from New York says: "As to our opinion of the present lumber market and prospects for the immediate future will say we are having a satisfactory volume of inquiries and prices have a strong upward tendency.

"We believe conditions will remain as they are until after the first of the year and that a fair volume of orders can be had if reasonable prompt shipment can be made."

A correspondent sends this excellent report: "The lumber market here continues strong and shows no signs of reacting. The entire lumber list is feeling the effects of current conditions with some items, of course, showing the way to all others. Yellow pine, in face of a steady demand, has advanced in price and the tendency is strong in the direction of further increases.

"The transportation problem is again causing a deal of trouble and the market is able to take quickly all the stock that is coming in. The car situation has done its part well—that is if something like present values hold when manufacturers are in position to ship freely. North Carolina is up about $1 and boat cedar is due to advance $5. There has been a steady and big demand for this class of lumber for the past several weeks, with indications of a continuance. Hardwoods and hardwood flooring are firm at prevailing prices with good demand.

"Thick cypress in the best grades is in big call and recently advanced in price materially. Hemlock is in line at $1 above the base of last month and spruce is up the same. White pine has advanced throughout the list $1 with slight increases probable."

• • •

PHILADELPHIA, PA.

A well known lumberman of Philadelphia, writes us as follows: "We do not see how lumber can help but advance in price. Practically everything that enters into the cost of manufacture has advanced very materially, and practically all of the substitutes for lumber have advanced materially

"All machinery, steel rails, locomotives, cars and equipments together with food stuffs, clothing and labor have advanced. Iron and steel have advanced two or three times the prices they were bringing some months ago. Cement has advanced. Building is on the increase and the reason that lumber has not advanced up to the present time is on account of the lack of export, but the home consumption has been large enough to take care of the products and hold the prices stiff. The home consumption is increasing so tremendously now, and the production is decreasing, due to the cost of labor, lack of coal and other things that enter into the cost of production that lumber is bound to advance very materially in the near future."

• • •

BUFFALO, N. Y.

Conditions in the Buffalo district are reported as follows: "The lumber market is stronger all around than a month ago and the assortments of stock wanted for building purposes has shown a considerable decrease within the past month. Buyers have been placing many orders for lumber that was wanted in a hurry, and this has not only been causing a depletion of local stocks, but has also been advancing prices. Everything points to a higher range still.

"More strength is now displayed in the white pine market than for a long time. Some wholesalers have lately been advancing their prices from $1 to $2 a thousand and the advance has been general throughout the list. Oftentimes the low grades are a large part of the business, but just now the demand is well distributed. On account of the curtailment of production this winter wholesalers look for a continuance of higher prices and say the market will be unusually strong next year.

"About the same sort of strength is being displayed by yellow pine and hemlock. In the former trade there is a severe shortage of cars, which is likely to last until the end of the year at least.

"The hardwood yards are all finding trade fully up to the normal, with prices holding strong, especially for thick stocks of maple, oak and ash.

Ohio Valley Markets

CINCINNATI, OHIO.

A correspondent well informed on conditions in the Cincinnati markets writes us as follows: "The yellow pine demand in this locality has been considerably strengthened by the excellent building weather which has prevailed the greater part of the fall. The difficulty in securing sufficient cars at the producing centers in the south has kept stocks on hand at the wholesaler and retailer pretty low and in cases badly assorted, and it is the general opinion that if the necessary grades were quickly obtainable, much more yellow pine would be moved in this territory. Where delivery can be made quickly, premiums and stiffer prices are being realized. The cypress demand continues to be considerably in excess of the available supply, prices are being maintained in a firm manner, with little deviation either way. The retailers' stocks are low, have been for some time, and they are buying frequently and moving as much as they can handle quickly. The country dealers' trade evidently is picking up very nicely, inasmuch as their requirements, mostly mixed car orders, are growing more voluminous and numerous.

• • •

LOUISVILLE, KY.

Conditions in the Louisville district are reported as follows: "The great 'come back' shown by oak during the past six weeks has been the outstanding feature of the local trade. During the early fall there was practically no demand for this commodity, but it is now moving well into the east and into the furniture manufacturing district. Poplar, which was also moving slowly, can hardly be supplied just now, due to the improved demand. In the walnut market all grades are moving, and timber buyers are scouring the country for logs.

"Two or more mill concerns in the Ohio valley have received big war orders from English buyers for gun stocks and aeroplane propeller blades, and one company has been advertising for 500 cars of walnut logs. It is claimed by the local hardwood firms that they now have more orders on their books than ever before in the history of the trade, and more orders than can be filled unless there is a decided improvement in the car shortage problem. Ash is improving steadily, there being a fair demand for vehicle and automobile woodwork made of tough white ash. Elm, cottonwood, hickory and mahogany are all selling well, also veneers and gluedup stock.

"In the pine market things continue active, building operations being especially good for this season, while yard stocks are very light, due to the long period when it was almost impossible to obtain shipments from the south on account of the car shortage."

COPENHAGEN A FREE PORT.

Lumber exporters, or in fact any group of shippers of lumber products, such as cooperage, furniture and allied industries, to European markets will learn with interest, if it has not been already called to their attention, the fact that Copenhagen, the chief port of Denmark, offers exceptional opportunities as a distributing or forwarding port for such parts of the continent of Europe as are open to the reception of American products. After the war, also, it will be a most advantageous point for handling lumber products to all parts of the eastern continent.

Not the least attractive feature of the Copenhagen project is that it is a free port, shippers being exempt from paying duty when goods are discharged from the ship, this duty being collected only on the removal of the goods into customs territory. Goods passing through Copenhagen warehouses for transshipment to other countries will in this way be free of duty, there being no examinations by the customs authorities to delay and add extra charges for the transmission of the goods. Furthermore, it is seen that no dues are paid to the government for the storage of the goods in the free port.

The Copenhagen Free Port Co. began the construction of the great system of docks in that harbor 25 years ago and its completed part already has made of Copenhagen an important factor in the transshipment of the world's trade from America passing eastward to Russian markets. Anticipating continued growth, the company is steadily extending its docks and warehouse facilities for the expected increased business.

The Copenhagen free port is the terminus and port of call of several large overseas steamship lines. Merchants desiring to ship goods through the free port can arrange with one of the steamship companies whose ships call there to have the goods shipped on to destination on a through bill of lading, or on an optional bill of lading, whereby the shipper may defer naming the destination of the goods until they have arrived; or shippers can forward goods direct to the Copenhagen free port for storing in the company's warehouses, from which the goods may be reconsigned direct to other ports. These transit goods are not charged with storage during the first fortnight, but only thereafter. It is necessary, however, for foreign shippers to have a representative or forwarding agent in Copenhagen who will take charge of the storage and transshipment of the goods. The Copenhagen free port issues warehouse certificates on demand for all goods consigned to it. These receipts are not transferable, but may be issued in the name of the owner of the goods or shipper, or to a bank, and in the latter case, the Copenhagen banks are open to negotiations for loans on these warehouse receipts.

Full information regarding the Copenhagen free port may be obtained from a pamphlet just issued by the company, copies of which may be obtained by addressing the Royal Danish Consulate, located at 336 West Madison street, Chicago.

FORESTRY INSTRUCTION AT HARVARD.

Through the courtesy of the authorities of Harvard University, we have received the official register of the Graduate School of Business Administration, a part of the great educational institution at Cambridge.

Owing to the necessity for trained men in woods work and the general demand of the lumber industry for larger opportunities for instruction along forestry lines, the Harvard School of Business Administration and the Harvard School of Forestry have co-operated in the offer of a two years' course of training in the lumber business. The course is recommended to not only college graduates who are looking forward to some branch of lumbering as a life work, but also to graduates of forestry and engineering schools who may desire to combine with their previous instruction some practical knowledge of the lumber business.

The studies required during the first year are in logging and sawmilling, in the principles of forestry, in general lumbering, in accounting principles, in marketing and in commercial contracts. The elective studies for the first year are in factory management, business statistics, investments, financial management of industrial corporations, accounting practice and railroad administration.

The required studies during the second year are general lumbering and lumber problems, together with elective studies of business policies, marketing, factory management, business statistics, social factors in business enterprise and industrial accounting.

Prior to the beginning of the first year course the students are assembled at some large sawmill and logging operation in northern New York, where they spend a month just before the opening of the university in observing timber operations and studying all features of logging and manufacturing. Upon the completion of the two years' course students receive the degree of "Master in Business Administration," while those registered in the department of forestry, to whom a similar instruction is also open, are eligible for the degree of "Master of Forestry."

BETTER BUILDINGS.

The Trade Extension department of the National Lumber Manufacturers' Association has just issued the initial number of a series of publications under the general heading of "Better Buildings," the first number having especial reference to the building of garages. It is a 16-page booklet, written by Charles W. Edgcumbe, and gives plans, specifications and probable cost of various types of garages. When automobiles began to replace wagons and carriages to a great extent, it was felt that there would be a considerable reduction in lumber consumption for vehicles for that reason, but results have shown that the inroads on lumber have not been as great as at first feared. It is estimated that there are 3,000,000 automobiles in use in the United States. This estimate is probably a little low, as it was made a year or more ago; but estimating that there are 3,000,000 garages to be built, each requiring 2,000 feet of lumber, the total would be 6,000,000,000 feet for supplying this need. Besides, the automobile manufacturers are using not less than 500,000,000 feet of lumber annually in making bodies, wheels, and for use as crating, so that the total lumber consumption for automobiles amounts to large proportions.

The circular issued by the National Lumber Manufacturers' Association sets forth the extent of the possible trade for garages and is a good thing to have in a retail lumber office or where people are interested in building garages.

IMPORTANT EVENT AT BOGALUSA.

An important event in the history of the magic city of Bogalusa, La., occurred there Friday, November 17, in the laying of the corner stone of a new Young Women's Christian Association building, which is being erected at a cost of $25,000, as a memorial to the late Mrs. F. H. Goodyear, of Buffalo, N. Y., wife of the founder of Bogalusa. The building is the gift to the city of her daughter and son, Mrs. Charles M. Daniels of Buffalo, N. Y., and her brother, Frank H. Goodyear, of Bogalusa.

Business was suspended at Bogalusa for the ceremonies, which took place at 4 o'clock in the afternoon of the day named. Thousands of the citizens participated in the ceremony of laying the corner stone, which was preceded by a procession of school children, 1,200 strong.

Walter P. Cooke, president of the Great Southern Lumber Co., delivered the principal address, presenting the building to the city of Bogalusa on behalf of Mrs. Daniels and Mr. Goodyear. After the ceremony of laying the corner stone had been completed by Mr. Goodyear and his sister, a speech of acceptance was made by Hon. W. H. Sullivan, mayor of Bogalusa, who spoke on behalf of the city. Mr. Sullivan said that at about this time of the year 10 years ago the late Mr. Goodyear had said to him, while standing near the location of the general offices of the Great Southern Lumber Co.: "Sullivan, let's build the best sawmill and lumber town in the whole world; let's build a town where the very best people engaged in lumber operations will want to live and build their homes." Mr. Sullivan said that Mr. Goodyear's ideas had been fulfilled and that in five years from now Bogalusa would have 25,000 population. He said that when the timber had been cut off there would be paper mills, and he believed that instead of being the greatest sawmill town in the world, as now, it would become the greatest paper producing city in the world. Work on the building will be rushed to a speedy conclusion and it will be a credit to the "Magic City."

BARK AS A ROOFING SUBSTITUTE.

While hemlock bark may not properly be considered lumber, yet as a by-product it contributes materially to the revenue of the lumber manufacturers of the north. During the recent peeling season, statistics from 80 northern Wisconsin and northern Michigan concerns showed that there were over 100,000 cords of bark peeled by them in 1916 as compared with about 30,000 cords peeled by the same concerns in 1915. The price this year was very much above last year also, sales last year ranging between $6 and $7, while in 1916 sales were made at $10 up to $12 and even higher, and brought to those manufacturers fully $1,000,000, or probably $800,000 more than during the previous year, a large part of which went to labor.

Hemlock bark, after it has been shipped to the tanneries and used by them, has been regarded as waste. The Forest Products Laboratory at Madison, Wis., however, has been experimenting and Director Howard Weiss states that this waste tan bark is now being used in the manufacture of roofing, for which purpose it is displacing rags, and it is said that in the last year so much of it has been used as to have reduced the price of rags from $72 a ton to $35 a ton. As 200,000 tons of rags have been used yearly in the manufacture of felt roofing, this discovery means much to roofing manufacturers.

It is also stated that the Forest Products Laboratory has succeeded in making paper of unusually good quality that would stand the printing of 12 colors satisfactorily, and 80 percent of the material used in this composition is waste tan bark. Studies recently made at the Forest Products Laboratory indicate that it may be possible to use waste hemlock and oak tan bark in making sheathing paper, carpet liners, bottle wrappers, deadening felt and similar articles of daily use.

NORTH CAROLINA PINE STOCKS AND ORDERS.

The monthly report of stocks and orders of the North Carolina Pine Association for November has just been issued under date of December 1. The report shows that the 10 members contributing to the figures had on hand November 1, 46,976,000 feet of rough lumber, and 4,835,000 feet of dressed lumber; that the orders on their books on that date were for 64,005,000 feet of rough lumber, and 7,004,000 feet of dressed lumber. The report shows a surplus in No. 1 of 1,665,000 feet; in No. 2, 1,961,000 feet; in No. 3, 3,497,000 feet; in red heart, 2,775,000 feet and in No. 1 and No. 2 box strips, 105,000 feet, a total surplusage of 10,003,000 feet. On the other hand the quantity oversold of box edge lumber was 9,077,000 feet; of 8-inch box, 4,033,000 feet; 10-inch box, 713,000 feet; 12-inch box, 546,000 feet; culls, 7,221,000 feet; box bark strips, 4,908,000 feet, and 1 x 6 box, 640,000 feet, a total oversold of 27,032,000 feet, or a net shortage of 17,029,000 feet of rough lumber.

In dressed lumber every item, excepting No. 2 flooring, No. 4 flooring and No. 4 ceiling and partition, was oversold, the net deficit in dressed stocks being 2,169,000 feet.

The association's report of cut and shipments for October showed a cut in that month of 36,371,000 feet and shipments of 35,062,000 feet, 24 mills reporting. The stocks on hand October 1 were 114,473,000 feet and on November 1, 115,782,000 feet, showing a slight accumulation for the month.

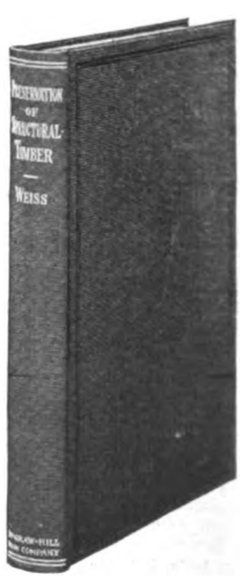
THE PRESERVATION OF STRUCTURAL TIMBER

By HOWARD F. WEISS, Director, Forest Products Laboratory, U. S. Forest Service; Honorary Member, American Wood Preservers' Association.

312 pages, 6x9, fully illustrated, $3.00 (12/6) net, postpaid.



In all the extensive literature of the wood preservation industry, this is the first book to cover systematically the subject in its broad aspect. It gives a complete survey of the entire industry.

Mr. Weiss, as Director of the Forest Products Laboratory, U. S. Forest Service, has had at his command the very best of material. This material, together with data obtained during his years of personal contact with the development of the industry, form the nucleus of this book.

Be Sure to Get an Expert When Changing to Electric Power

Skill is required for the proper application of electric power in your saw and planing mills. You would not think of buying saw mill machinery without careful study of local conditions by experts. Then don't have old line steam men lay out your electric drive.

Instances are known where the splendid economies of electric power were used up to pay interest of heavy investments in copper cables which were unnecessary. For this and similar reasons mill builders, not having time to investigate underlying causes, have thought electric power uneconomical.

Some mill builders have called in our engineer specialists to help apply electric power correctly. This service was extended, without obligation to the mill builder, in the hope that the use of electric power might be extended. You are invited to avail yourself of this service.

LOGGING

The Principles and General Methods of Operation in the United States

By Ralph Clement Bryant, F.E., M.A., Manufacturers' Association Professor of Lumbering, Yale University.

8vo, xviii 590 pages, 133 figures.

Cloth, $3.50 Net

The information which is contained in this book can be applied by the lumberman in his daily work.

The chief facilities and methods for the movement of timber from the stump to the manufacturing plant, especially logging railroads, are discussed at length.

Greatest emphasis has been laid on features about which there is not much written materlal available.

FAST SAWING

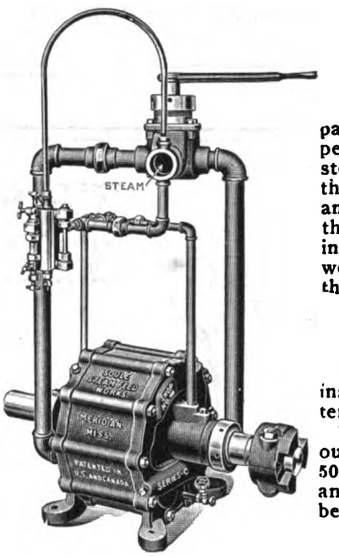
That's the thing that counts in the month's profits. The faster lumber is cut the sooner the order is filled, and the more orders can be filled.

Then there's the prompt shipment—a pleased customer, "the best asset!"

A SOULÉ STEAM FEED will enable you to do this, double up your output.

It has for others, and the increase paid for the machine right now.

See what others say about it. Catalog free.



Soulé Steam Feed Works
Meridian, Miss.

"This has increased the capacity of our mill fully thirty per cent, with no excessive steam consumption. We found the machine exceedingly simple and easy to install, and we feel that we made one of the best investments in machinery that we ever made when we bought this Feed from you."
Horwood Lumber Co.
St. Johns, Nfld.

"Your Steam Feed No. 2 was installed at this plant in the latter part of December, 1908.
"Since we installed this feed our mill cut has increased about 50% and the difference in the amount of steam required has been un-noticeable."
Bartow Lumber Co.
Cartersville, Ga.

The Simons Band Saw in its ability to stand feed, makes a decided saving, regardless of the question of price. And just now this is a vital question with millmen. Simons Band Saws are made of Simonds Crucible Steel, and will hold their tension and cutting edge longer than others. Ask the sawyer who saws with them, the filer who takes care of them, the owner who profits by the use of them, and you will have the opinion of men who know. Then give the saws a trial and prove to your own satisfaction that Simonds Band Saws are the best and most economical.

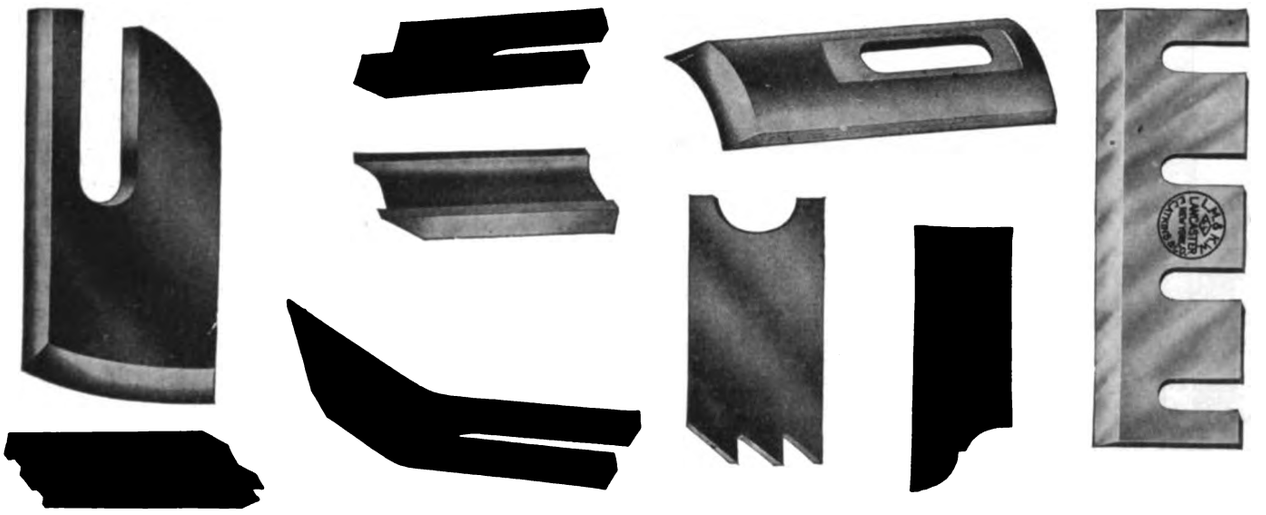
ATKINS MACHINE KNIVES



The steel used in all ATKINS MACHINE KNIVES is made under our own formula. We honestly believe that it is the best steel we have ever seen for this purpose. Thousands of efficiency experts in the largest plants in the World agree with us and are buying our Knives.

Our long experience has taught us the proper tempering methods to avoid hard and soft spots and brittleness. They are given that hard, tough temper so essential to long edge holding qualities. We are sure they will make good in your plant. Will you try them?

HIGH SPEED KNIVES

One of our important specialties. We are very successful with Atkins Thin Knives, made of High Speed Steel. You will find them economical. We have just published a Machine Knife Book. It illustrates and describes all types of Knives for all purposes. It shows the prices for all Knives. Give us your address and we will send one with our compliments.

Solve Your Lumber Problems For Good

UNIFORMITY OF GRADES AND QUALITY F-J

TRADE-MARK

¶ It costs you no more in the beginning and it's cheaper in the end

FROST-JOHNSON quality and service cost you no more than ordinary kinds—and the perfect satisfaction is thrown in for good measure.

We co-operate with our customers in every way, forwarding the right grades of lumber—at the right time—at the right price, thus enabling the lumber retailer to get a firm grip on his trade by satisfying his own customers.

We are prepared to take care of your order promptly and intelligently, so that you will experience no such annoyances as shipping delays, off-grades and the like.

Our six large lumber mills in Texas, Louisiana and Arkansas are equipped with the latest and finest machinery that money can buy. But that isn't all. This unrivalled equipment is operated by workmen who are thoroughly proficient.

Our mills have a combined daily capacity of more than 1,000,000 feet of yellow pine lumber, and we have on hand at all times, ready for immediate shipment, between 40,000,000 and 55,000,000 feet of yellow pine lumber of all grades.

Our entire Service Organization stands as a unit back of all transactions. This organization of lumber experts has been established and educated in our policies so that we may make an effort to see that our customers are satisfied with every detail of every transaction.

You need our price list which tells the exact cost of any grade of yellow pine lumber DELIVERED to your nearest railroad station. Write today.

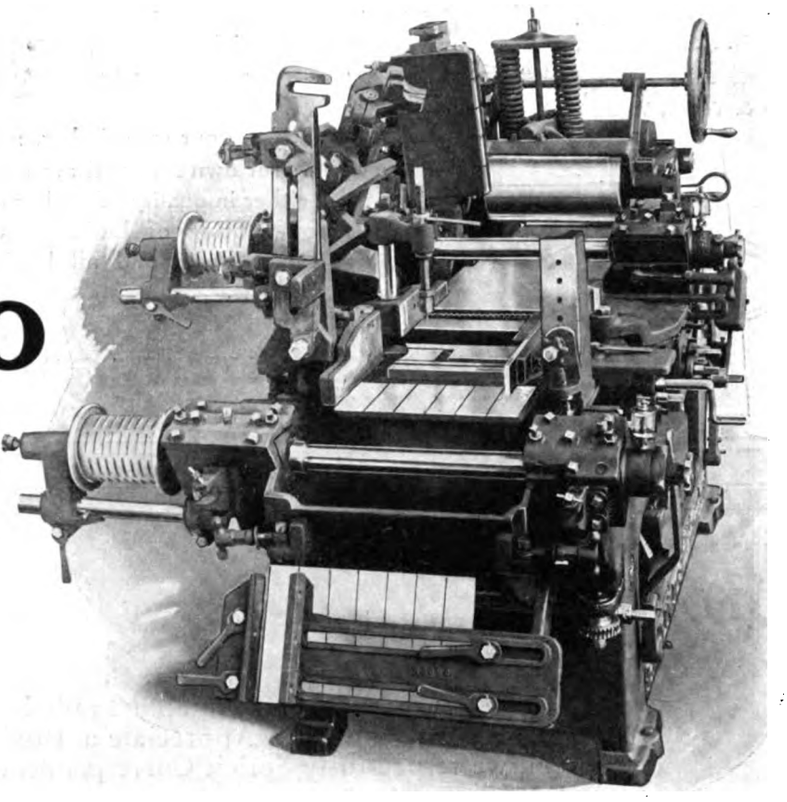
Increase The Ratio of Productive Time!



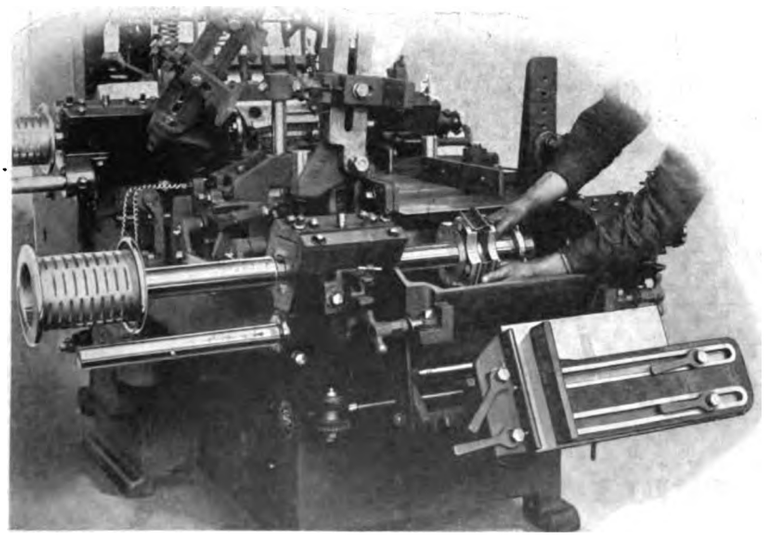
The wide-open construction of the 108.

WITH the prices of labor mounting higher week by week, there's nothing more necessary than utilization of every possible moment in productive effort. In hundreds of woodworking plants there are old style moulders which, under present conditions, are simply lavish in their waste of time. Maybe you've never thought of it because loss of productive time is one of the hardest sources of loss to detect. You've got that waste in your factory if you're using old slow feed moulders with hand made knives, instead of

The Yates Number 108 Moulder

Yates
formerly BERLIN

The Invariable Choice of the Man Who Knows



Slipping a Head on the 108.

GET rid of the old moulders. Don't let them sap, unhindered, the vitals of your business. Investigate the Yates Number 108 Moulder, with its slip-on heads and wide open construction which permits it to be set up in a few moments. Look into the use of milled bits on the Number 108, giving a perfect match of pattern at once, without loss of time in filing and tinkering "to make 'em alike."

Consider the high rates of feed—75 to 100 feet per minute—that can be used, in most cases, without lowering the quality of the output in the slightest degree. When you come to understand the difference between old style moulders and the new Yates high speed Number 108, you'll see where the 108 is a money saving investment.

Send for our folder, "Putting the Prod to Production." It tells all about the New Yates Number 108. No obligation involved.

COLEMAN FEED ROLLER
(that never wears out)

You Are Missing Something Good Read This Little *SERIOUS* Talk

COLEMAN EDGER FEED ROLLERS are being adopted *on sight* by scores and scores of modern sawmills. The case is simple: COLEMAN FEED ROLLERS save money, make better lumber, lessen delays and increase the efficiency of the edgerman. Coleman Rollers can be sharpened AT NOON while in the edger. It's no case for argument. It's just the plain truth that in doing without COLEMAN FEED ROLLERS (for Edgers, Bolters, Lath Mills) you're cheating yourself. We'll prove it by our Sawmill Sense booklet AND

He Who Looks Before He Leaps

It is proper form, when writing copy for an advertisement, to give consideration to the date of the publication in which the advertisement will appear. As this issue of the Lumber World Review is dated December 25, to a certain extent, it takes ideas of business out of our heads and, for this once at least, we will not talk business. Besides, there is another CYPRESS advertisement in this issue which is straight business from beginning to end and this relieves us of our responsibilities.

We certainly wish everyone connected in any way with the lumber business a MERRY CHRISTMAS and PROSPEROUS NEW YEAR. We believe it is coming to them, as the lumber game has not been a bed of roses during the past two years. At the same time we CYPRESS people are not complaining. Despite the dull times, we have progressed and, thanks to our good friends among the retail dealers, we stand nearer the top of the ladder than we did a year ago.

We have tried to co-operate, first, among ourselves; second, with our friends the retail dealers; and, third, with the actual consumers through the retail dealers. We have the feeling of satisfaction as the end of the year approaches that we have done our share toward improving general lumber conditions, and this in itself puts us in the frame of mind which should be present at Christmas time.

And so let us all gird our loins for the busy year that is to come. We, for our part, can promise greater energy and greater service and we have plans drawn which should mean great things for you and for us. We will not talk about them now, as it is merely our intention to extend the season's greetings and to felicitate you and ourselves upon how well we are pulling together.

The Best Cypress District

THE following from the National Retail Lumber Dealers' Association's declaration of business ethics—

Branding Lumber

Sec. 3. This association heartily endorses and will support the efforts of all associations of lumber manufacturers which are devising ways and means for the branding of the product of their members and thereby assuring, within a reasonable variation, the integrity of the grade, as well as making possible the identification of the stock, with consequent protection to the retail dealer and the consuming public.

Advertising Lumber

Sec. 5. The retail lumber dealers recognize that their interest lies in the sale of lumber and they are directly benefited by the advertising campaigns which are being conducted by the National Lumber Manufacturers' Association, and by the several associations of lumber manufacturers. This association, therefore, most heartily endorses all efforts directed to the promotion of the use of lumber and commends those manufacturers who are aiding such promotion.

THE SIGNIFICANCE TO *YOU* OF THE MEMBERSHIP OF THE

Lumber World Review

IN THE ASSOCIATED BUSINESS PAPERS, INC.

YOU depend upon the LUMBER WORLD REVIEW for an unbiased and accurate report of all news affecting your business interests.
Probably too, you give heed to its editorial counsel in many matters of considerable consequence. You have a right therefore, to know about the policies and principles back of the important service rendered by LUMBER WORLD REVIEW.
The membership of this publication in the Associated Business Papers, Inc. (the International Association of Class, Trade and Technical Papers), means that it has achieved an exceptionally high publishing standard, and has subscribed unreservedly to these—

STANDARDS OF PRACTICE OF BUSINESS PAPERS

The publisher of a business paper should dedicate his best efforts to the cause of Business and Social Service, and to this end should pledge himself.

1. To consider, first, the interests of the subscriber.
2. To subscribe to and work for truth and honesty in all departments.
3. To eliminate, in so far as possible, his personal opinions from his news columns, but to be a leader of thought in his editorial columns, and to make his criticisms constructive.
4. To refuse to publish "puffs," free reading notices or paid "write-ups"; to keep his reading columns independent of advertising considerations, and to measure all news by this standard: "Is it real news?"
5. To decline any advertisement which has a tendency so mislead or which does not conform to business integrity.
6. To solicit subscriptions and advertising solely upon the merits of the publication.
7. To supply advertisers with full information regarding character and extent of circulation, including detailed circulation statements, subject to proper and authentic verification.
8. To co-operate with all organizations and individuals engaged in creative advertising work.
9. To avoid unfair competition.
10. To determine what is the highest and largest function of the field which he serves, and then to strive in every legitimate way to promote that function.

If you have read the foregoing standards, there is not much left to be said, except to tell you that these principles are *present day realities* and not merely beautiful ideals for future attainment.

ACCOMPLISHMENT

THE STORY OF ACCOMPLISHMENT:

To standardize lumber by making an international reputation for the manufacture of **quality** lumber.

To successfully operate ten great sawmills located in the heart of the finest forests in the South.

To produce the maximum capacity of one million, five hundred thousand feet of **quality** lumber per day.

To market all over the world four hundred and fifty million feet of **quality** lumber per annum.

To deliver to dealers, wholesale buyers and export trade twenty-four **thousand, three** hundred and sixty cars of **quality** lumber per annum.

To build up and maintain a selling organization of able Salesmen, meeting the lumber trade in all parts of the United States and some foreign countries.

To mass this gigantic organization, the largest lumber manufacturing institution in the world, under one administrative head, directing the growth, development and consummation of its phenomenal success, all in a short twenty-five years—**Is nothing short of a Titan Task.**

Just twenty-five years ago the company started to manufacture lumber in a small way, with three objects in view, namely:

1. The standardization of lumber which meant **quality** lumber.
2. The production of **quality** lumber in sufficient volume from several localities to take care of extensive orders, so that shipments could be made on record time.
3. And last, but most important, to build up an institution so trustworthy as to its method of business conduct as to inspire every dealer or buyer of lumber, or any commercial institution, with absolute confidence, wherever the name of The Long-Bell Lumber Company went forth.

With these three principles in **mind**, Mr. Long welded together the **great interests** which have grown from **the almost forgotten** miniature nucleus in 1891, **into not one, but ten** enormous **sawmill institutions under one** head. These ten **sawmills, located in the States of** Arkansas, Louisiana **and Texas, have succeeded** in standardizing lumber, placing upon **the** market **quality** lumber unassailable as to **its** uniformity and superiority. And today, **when** the name of **The Long-Bell Lumber Company** is mentioned, it is understood that the **delivery** of **quality** lumber will be exactly in accordance with the agreement of time of shipment and quality of the lumber, plus the satisfaction of dealing with an institution that lives up to every contract it **makes.**

To have accomplished this splendid task is a satisfaction to the management of The Long-Bell Lumber Company's operations, but that satisfaction of accomplishment is only an incentive to further development. An institution founded upon the principles that have made The Long-Bell Lumber Company, world famous in the production of **quality** lumber, **is** in an enviable position in the lumber markets of this and foreign countries.

The work is just begun. The accomplishment already made demonstrates conclusively that this organization can at all times take care of all orders for long and short leaf yellow pine and oak flooring **quality** lumber, both in this and foreign countries.

As long as the lumber industry of America will supply the trade, so long will The Long-Bell Lumber Company endure and deliver its **quality** lumber to the trade.

There is a salesman in your territory, authorized to quote you the lowest prices we are making on Long and Short Leaf Yellow Pine, Forked Leaf Brand Oak Flooring, Oak lumber, Straight or Mixed car lots, etc.

An inquiry by postal, wire or letter brings a quotation or salesman to you when you want one.

If You Have An Interest in Lumber You Need This Book!

A Lumberman's Library of Useful Knowledge in One Volume

EVERY Lumber Manufacturer, every Lumber Dealer, every Lumber Salesman, should have this book, **"Selling Lumber,"** no matter what **kind** of lumber they may handle. The wealth of practical knowledge in **"Selling Lumber"** is not restricted to the manufacture and sale of Yellow Pine—it deals with the vital problems effecting the entire Industry. It is absolutely authoritative, and it is the **only** book of its kind ever published.

Here is a Hint of What "Selling Lumber" Holds for You

"Selling Lumber" not only reproduces all of the specially prepared papers presented at the Southern Pine Association's School of Salesmanship, held at St. Louis, June 26, 27 and 28, 1916, with a complete Stenographic report of scores of discussions and extemporaneous talks on Lumber questions by the 500 Lumber Salesmen, Manufacturers, Dealers, Architects and Scientists who attended; in addition, the volume contains the complete Specifications of Yellow Pine Timbers, including the Density Rule, Standard Specifications for Bridge and Trestle Timbers, Standard Grading Rules for Yellow Pine Lumber, and the Standard Specifications for Car Material, with photographic illustrations of defects defined therein. The whole constitutes a veritable encyclopedia of Lumber Merchandising, an invaluable work for study and reference for every man in the lumber business.

A Few of the Distinguished Contributors:

Robert S. Lindstrum, American Institute of Architects.
Howard F. Weiss, Director Forest Products Laboratory, U. S. Forest Service.
Dr. Herman von Schrenk, Consulting Engineer, Southern Pine Association.
Dr. Stanley L. Krebs, Institute of Mercantile Art, Philadelphia.
H. S. Gardner, Institute of Industrial Research, Washington, D. C.
D. M. Barrett, Chairman World's Salesmanship Congress.
E. A. Sterling, Manager Trade Extension Department, National Lumber Manufacturers' Association.
H. S. Sackett, Timber Engineer, National Lumber Manufacturers' Association.
R. J. Tolson, Auditor, William Cameron & Company, Inc.
Edward Hines, Edward Hines Lumber Company, Chicago.
Gen. L. C. Boyle, General Counsel, Southern Pine Association.

"Selling Lumber" is a volume of 496 pages, handsomely and durably bound in cloth, in black, red and gold. **A very limited number of copies are available for general distribution—when these are gone, your chance to get one will be gone.** The Price, while they last, is $2.50 per copy. Orders filled in the order received. Send for yours **TODAY.**

A Few of the Many Subjects Treated:

"Merits and Limitations of Wood."
"Wood Substitutes."
"Decay of Lumber and Methods of Prevention."
"Selling Costs, Direct and Indirect."
"Yard Stock Grading Rules."
"Best Finishes for Southern Yellow Pine Interiors."
"Stumpage and Logging Costs."
"Lumber Salesmanship."
"Sawmill Costs."
"Painting Yellow Pine."
"Reaching the Consumer."
"Character Judging as a Business Asset."
"Co-Operation with Architects and Builders."
"Claims and Disputes; Their Causes and Settlement."
"Standard Mill-Construction."
"Possibilities for Mill Refuse."
"Costs from Mill to Car."
"Efficiency."
"Co-Operation with Distributors and Consumers."
"Selling Factory and Industrial Trade."

Your Money Back if You Do Not Agree This is the Most Valuable Book on Lumber Merchandising Ever Published.

" 'ON THE JOB' FIRST and ON THE LUMBER AT LAST"

READ READ READ

TRADE MARK REG. U.S. PAT. OFFICE

EVERY WORD BELOW

The Southern Cypress Manufacturers' Association

originated the idea of MAKING EVERY PIECE of lumber a KNOWN QUANTITY (and a KNOWN QUALITY) instead of a lamb-like speculation on the part of His Honor, the Ultimate Consumer.

No Manufacturer worthy of membership in any responsible Association can gainsay the Asset Value TO HIM of the confidence reposed in him by his trade.

Not one of our foresighted friends, the Retailers of Lumber, the country over, who is qualified for Local Success, but knows that National Integrity and unqualified and unquestioning FAITH IN THE COMMODITY is the root of every sale that repeats or leads to a chain of other sales.

Not one of the group of broad-minded, able and discerning Wholesalers of Lumber but knows three things: 1st, that the PRINCIPLE OF IDENTIFYING THE GOODS by the MAKER THEREOF (who thereby publicly testifies to their inherent character, their integrity of manufacture and honesty of grading) is the GREATEST SALES STIMULATOR ON EARTH; 2nd, that equal frankness on the part of ALL intermediaries between the MAKER and the USER is the only recipe for a *solid* and *stable* success (especially if the Ultimate Consumer is EDUCATED as to EXACTLY WHAT IS WHAT); 3rd, no intelligent wholesaler can remain in doubt as to the probable course of conduct of a retailer who finds himself ABLE TO SELL with UNEXPECTED EASE a commodity GUARANTEED IN EVERY SENSE by a RESPONSIBLE MANUFACTURER, and able to sell *only with difficulty* (or not at all) the Lumber to which its maker hesitated (for any reason) to *sign his name.*

Since our first statement of intentions *we have deferred for MORE THAN A YEAR* the actual application of the legally registered CYPRESS TRADE-MARK *as an Association requirement;* this was to give every holder of Unbranded Cypress a liberally fair chance to dispose of his stock *with the aid of our national advertising* of CYPRESS simply as CYPRESS. The nation-wide demand for Cypress, "the Wood Eternal," has become so heavy that even though mill sales have passed all high records, we are advised that average retail stocks are now unusually low—probably because most retailers have been holding off on buying any more *Unbranded* Cypress.

They have been awaiting our statement as to JUST WHEN we would ADVISE the great CONSUMING PUBLIC WHO WANTED CYPRESS (the Wood Reliable as well as "Eternal") to

INSIST on SEEING the Legally Registered Cypress Trade-Mark

TRADE MARK REG. U.S. PAT. OFFICE

TRADE MARK REG. U.S. PAT. OFFICE

TRADE MARK REG. U.S. PAT. OFFICE

on every piece of Cypress they consented to buy. THIS IS THAT STATEMENT—and the meaning of it is that on or before March 1, 1917 (according to dates of issues of the various publications to be used), we shall

Announce to the Consuming Public, through every available channel, that thereafter they will be **Recommended to Buy Only Such Cypress as Bears the Association Trade-Mark.**

TRADE MARK REG. U.S. PAT. OFFICE

BEFORE THE BUILDING SEASON IS OVER THE LUMBER-CONSUMING PUBLIC WILL BE LIKELY TO BE INSISTING ON "CYPRESS THAT I KNOW IS CYPRESS—MADE RIGHT AND GRADED RIGHT." Our candid (and friendly) advice is that *all* intermediaries

Specify That Your Cypress *Must* Bear the Official Cypress Trade-Mark or Be Refused

"The only permanent safety for the seller is continuous safety for the buyer." The Cypress trade-mark is a Guarantee Policy for the Public and therefore a "Trade Equilibrator" for all who convey Cypress to the public.

ON CHRISTMAS DAY WE BEGIN TO SORT UP and label the pet vices we hope to have the courage to throw away on New Year's Day. We begin to order a lighter cigar and to take shorter drinks and to try, if possible, to avoid asking the host for "a second helping," in order that it may be easier when New Year's Day rolls around to walk our way a little bit more readily and a little bit more sprightly after having laid aside several of the ENJOYABLE EVILS of LIFE!

These annual over-haulings of the soul are worth while, even if the pledges are not kept until the end of the first month of the year. It does not much matter—either—just what evil thing we put aside for the self abnegation puts muscle on one's mentality and makes it stronger for the NEXT effort even if it lasts only a LITTLE time.

So if these holiday resolutions do not reform the whole race of men and make moral athletes out of all of those who are running the course of life, they will help a LITTLE and will make the way a bit smoother for at least a FEW more laps of the journey.

Just at this time there is only one bit of reformation that we would have universally adopted by the entire human race.

We do not stipulate that the arrangement shall be in perpetuity, either. We would have the agreement made as we write an advertising contract, to run "one year from date, and after that until forbid."

This is what we wish to see. A few million people to stand up and DECLARE and AVOW and AFFIRM upon their HONOR that they will NEVER AGAIN, for at least "one year and until forbid" settle ANY happening of life by "CIRCUMSTANTIAL EVIDENCE."

You meet six beggars some morning, all in one block and you immediately conclude that all of the world is hungry; but it isn't so.

The weather man has prophesied sleet and snow and east wind for Thursday, but there is not the slightest use or sense in laying out your storm coat and preparing for a cold, wet day until the day actually comes; for DON'T you know that the RECORDS show that about 70 percent of that sort of dismal Thursdays turn out bright and warm and full of sunshine and hope!

You are very sure that the war will end some time; and that with the ending of the war there will pass the necessity for the making of munitions; and that when that happens several million people in the United States will be out of employment; and that there will henceforth be nothing for them to do. Of course we can EXACTLY know that this will be true on the principle that the war MUST end and that munition-making MUST stop; but we have no right to carry the inference any

FURTHER than that, for there is not a man born of woman who can make a reasonable GUESS as to what class of employment may be ready and at hand for the "munition-makers;" and we have no right—CIRCUMSTANTIALLY—to indulge in black prophecies.

We read the black head lines and learn that another two miles of trenches has been lost or won and another ten thousand men have been killed or made prisoners; and we see these things day after day and month after month and year after year—the churches and homes and market places of peaceful peoples going up in smoke under showers of shot and shell—and we are VERY sure that there is not left the slightest restraining force of CHRISTIAN INFLUENCE in the minds of men—BUT there IS, you know—and the time will come when peaceful crops of grain will be planted and harvested where the battles are now raging, and the church spires will again point the way to a PEACE which cannot be measured by any BREADTH or WIDTH or HEIGHT ever KNOWN TO MAN.

In the settling of all the affairs of life let us look deeper than MERE CIRCUMSTANCES. Let us all be comforted by the thought of the world's best thinkers.

David Starr Jordan recently said: "This storm will sometime pass; and, as human nature has not been permanently altered and as the forces that make for righteousness were never so strong before, we may enter on a new era with present humility, but with larger hope involved in the belief that a great wrong dies in the moment of its highest triumph."

George W. Cable, the novelist, says: "In nineteen centuries the Christian church has failed to preach * * * * international Christianity and has idly hoped and prayed for universal peace without it. In the light of a divine love and care of the world, it now seems clear that this fearful chastisement has been indispensable to the establishment of a Christian democracy of nations."

We might quote scintillations of a thousand bright minds on this one subject of the possible effect of the great war on Christianity, but we had far better endeavor to induce those who sit in our "Wide East Windows" to never again, as long as they live, endeavor to settle ANY account between men or any controversy between the souls of men by that greatest error of all minds "CIRCUMSTANTIAL EVIDENCE."

An Astounding Piece of "Selling Information!"

AMBASSADOR GERARD RECENTLY MADE a statement at a banquet, which we believe to be authentic as to its origin, and IF authentic, certainly it is the most remarkable piece of information that has been given out since the war began. Here it is for your earnest contemplation:

"One thing Mr. Gerard told the diners that the United States should hear:

"GERMANY HEREAFTER WILL DO HER BUYING AS A UNIT.

"That is to say, ONE buying agency appointed by the German government will do ALL the buying FOR ALL THE PEOPLE IN GERMANY.

"If all the German merchants put together need ten million pounds of cotton, they will tell the government how much they need. And the government WILL BUY IT.

"If manufacturers want copper or petroleum, or steel, zinc or anything else, each one will say to the government: 'I want so much at the best price.' THE GOVERNMENT WILL BUY IT.

"In other words, when this war is over the government of Germany will appear as the great buying power of the world—one single agency buying for an entire nation.

"Let Americans reflect upon what that will mean.

"Let Americans, and especially the American government, ask themselves what kind of a chance Americans will have SELLING IN COMPETITION WITH EACH OTHER, when in Germany, and in other European countries as well, there will be absolutely NO COMPETITION AMONG THE BUYERS.

"We shall need here co-operation between business and government, freedom to operate on a big scale, THOUGHTFUL PREPARATION for the new merchandising in which entire nations, not individuals, will appear as buyers and sellers."

"Trade Commissioners" or Not "Trade Commissioners?"

ONE PHASE OF GOVERNMENTAL PROCEDURE the lumber trade will have to abide by, if it ever has any trade commissioners to go abroad, will be the civil service examination which the commissioners will have to undergo if they are EVER to be chosen!

It does not matter how much we may inveigh against the rules of the schools, the rules of the schools will nevertheless PREVAIL.

It does not matter how much we are wedded to the idea of having our "Trade Commissioners" chosen from among those people who are first lumbermen and linguists and foresters, etc., afterwards—the FACT remains—that the Government procedure will prevail.

And right there comes the prejudice against doing business with the Government. Government knows no indirection, nor how to temper the wind to the shorn lamb, nor any crossroad through the hills if the rule prescribes a straight line down through the valley and a right angle turn at the bottom.

It is true that there has been one examination—oral and otherwise—and that even the Civil Service Commission was not satisfied, and no Trade Commissioners have been picked out to date; and it is ALSO true that another examination has been held, or WILL be held SOON, and that the standards will lean a little more in the direction of the "Trade Commissioner" being just a practical investigator and lumberman first of all; but no one who contemplates APPLYING for this position may consider for a MOMENT that he may escape having to be able to speak one or two other languages, besides English.

There is no use of poking fun at this thing by relating the story that the man who so far has had the highest mark in this contest is by profession a piano tuner and knows nothing about the lumber business; or to suggest that foreign languages are not necessary qualifications for Trade Commissioner by relating the fact that one of the most proficient general salesmen and investigators infesting the Continent of Europe during recent years is a young man who—while he speaks nineteen languages and dialects—devotes himself EXCLUSIVELY to the sale of PHONOGRAPHS.

If the Government goes into this thing it will have its standards lived up to, and those who are ambitious to get one of those positions may as well know it NOW.

In the meantime, the most interesting fact in connection with this matter is: Where will we get the $60,000 to finance these Trade Commissioners? The proposition was incubated at the end of spring and born on August 21, but we feel—about the financial end of the proposition—much as Minervy Ann Perdue must have felt when—referring to the salary her black husband was supposed to be drawing from the reconstruction Georgia legislature—she said: "He MAY git paid for settin' in dat legislature—but he's been dar nigh onto a yeah now, an' I ain't seen arry one of de money"!

When will we SEE the money?

"Uncontrolled Combinations" Versus "Ruinous Competition."

WE MUST PLEAD IGNORANCE IN A GENERAL way concerning the career and attributes of ex-Senator Cartwright; but some time since he delivered himself of some sentiments in a speech which comes so pat for our purpose just now that we print it in full with our compliments to the ex-Senator:

"We used to believe that the accumulation of great wealth in the hands of an individual was harmful to society. We believed that when a man accumulated a few millions it meant the impoverishment of that many average citizens. We overlooked the fact that God Almighty has solved that problem by limiting the use of wealth.

"When Rockefeller makes an extra hundred million, he doesn't eat an extra slice of bacon or an extra pound of beans. He doesn't wear two suits of clothes at a time. When he makes an extra hundred million he establishes more plants and employs more men, merely becoming the overseer of a bigger job.

"The harm is done when Rockefeller loses a hundred million. When he has been persecuted and prosecuted and becomes discouraged he closes up plants and discharges thousands of employes, who join the army of the unemployed. He eats just as much bacon and beans, wears just as good clothes as he did before. Labor is the only sufferer.

"I have come more and more to the conclusion that the legitimate province of government is to preserve the peace—put men in jail for dishonesty and for violence, perhaps, but leave business to solve its own problems—and that it ought to enact and enforce laws with a view to promoting and encouraging business rather than with a view to restraining business.

"As many of you know, I was the author of the 'Cartwright Anti-Trust Bill,' and I am led to doubt the propriety of that class of legislation. I do not know of any good the law has done, and I do know that it has frightened and restrained some business industries compelled to combine for their own preservation. I know that it worried the raisin growers and it worried the walnut growers and the citrus growers of this state (California).

"I firmly believe that unlimited and ruinous competition is more harmful to the community than uncontrolled combinations, for experience has shown that no combination for the purpose of raising prices can long exist if the prices are exorbitant and unfair.

"For the past twenty years we have been preaching the gospel of hate. Most of us who run for office appeal to class hatred as the surest means to political success. I want to live to see the day when the soap-box demagogue who preaches the gospel of hate and sows the seeds of discord and discontent—who leads his deluded followers to a harvest of vengeance—may be driven from his soap-box by the very men whose cause he pretends to espouse."

Recent Improvements in Cross Cut Saws

Address Before the Convention of the Southern Logging Association, October 26, 1916, New Orleans, La.

By JOHN C. McCAUSLAN of Henry Disston & Sons, Inc., Philadelphia, Pa.

Mr. President and Gentlemen of the Southern Logging Association. It was with great pleasure that our firm received your invitation to address you on the subject of "Recent Improvements in Cross Cut Saws." For my part, I deem it an honor and a privilege to have been selected as spokesman, and I hope this paper will prove of more than passing interest.

Since I represent the firm of Henry Disston & Sons, Inc., Philadelphia, the information given in this address must necessarily be from the standpoint of the history of the house, which dates back to 1840. The time intervening has seen all the real progress that has ever been made in the manufacture and use of the crosscut saw as an effective tool.

SAWS USED BY THE ANCIENTS.

Before passing to the improvements of modern days, it may be interesting to know something about the tools used by the ancients. The cross cut saw dates back to what is called the "Neolithic" or Later Stone age, when civilization was in its most primitive form, and when all implements were of the crudest types. Among the mementoes of the prehistoric age are saws made from flakes of flint with notched edges. Specimens now in existence vary in length from 1½ to 9½ inches.

Those of us who are accustomed to see a log drop apart in thirty seconds can appreciate the wearisome task the sawyer had to accomplish for a like result in those obscure days.

The next advance made in this line, as shown by specimens in existence, seems to have been flint pieces tied to pieces of wood with thongs, and a later form of the same tool shows flakes of flint in wooden handles or casings held in asphalt. A well preserved specimen of this type seems to have been made for a left-handed man.

The Greeks claim the honor of having invented the first saw, for an ancient Greek legend tells of a man called Talus or Perdix, who found in the jaw bone of a fish or of a serpent the conception of a saw. This he formed by cutting teeth in a piece of iron. It is more probable, however, that the first effective sawing was done by the Egyptians during the Bronze age, of which period we have many indications of splendid inventive genius. During this era saws were made for cutting both wood and stone. It is recorded that bronze saws, set with either corundum or diamonds, were used to cut the massive stone blocks of which the pyramids are built. A complete and interesting account of these antiquated tools is to be found in an illustrated pamphlet, issued by Henry Disston & Sons, entitled "The Saw in History," a copy of which I hope each of you will carry away.

DEVELOPMENT OF AMERICAN SAW INDUSTRY.

Leaving the history of the saw in the old world for the history of the saw in the United States, we are obliged to refer to our United States patent office reports for authentic information regarding the dates of beginnings. The first patent issued on a cross cut saw was dated 1853. It covered the form of tooth known as the "Tuttle" tooth. This patent was re-issued in 1863. The Tuttle tooth, in a modified form is still largely used. As far as I am able to discover, the "tenon" and "plain" teeth were the only forms used before 1853, neither of which had a raker. Between the years 1866 and 1868, patents were issued on what is known as the "single hook" tooth and the "double hook" tooth. Saws made with the single hook tooth had rakers on one-half of the saw inclined to one end, and on the other half toward the other end. The double hook tooth was very similar to the present day "two cutter" and "raker" pattern, except that the raker was very large and very hooking. The raker in the single hook pattern was, at first, straight on the front, and seems to have played the part of a cleaner, rather than a planer tooth. Indications point to the fact that as late as 1878 the real function of the raker was not fully understood, and was generally used as a scraping tooth, to keep the cut free from dust.

The "Champion" tooth was patented in 1866 and the "Lumbermen" tooth, a two-section model, in 1869. The "Great American" tooth, with sections containing three teeth and no rakers, was introduced in 1870. This tooth, by the way, proved very popular, and has held sway all these years, for saws containing this pattern of tooth are still made in large quantities. The "Dexter" pattern was patented in 1878, by a man named Poindexter. We have positive knowledge that rakers were swaged before 1880, yet the first patent showing a swaged raker was issued to J. M. Smith, in 1885.

VARIOUS TYPES OF SAW TEETH.

To give you an idea of the various types of teeth which were popular enough to find their way into catalogue cuts—taken in ten-year periods—those in use in 1860 were the "plain," "tenon" and "Tuttle" teeth; in 1870, the "Great American," "Nonpariel," "hook," "plain" and "tenon" teeth; in 1880, were added the "Lumberman," "Climax," "Champion" and "Diamond" teeth. In 1890, the present day forms of straight back saws, with sufficient swell on the breast to make them fast cutters, were in full swing, and from that time until the present day improvements have been made in rapid succession.

DEVELOPMENTS OF THE BLADE GRINDING.

The crosscut saw in its original form was flat, that is, of the same thickness from end to end, and from front to back. The use of crosscut saws at that time had increased to such an extent that a faster cutting and easier running saw was demanded. This was met by grinding the blade two gauges thinner on the back. The mechanical devices for doing this work were far from perfect, consequently the finished blades were irregular in thickness on the breast of the toothed edge, being thicker at the center of the saw than on the ends.

The next improvement in grinding produced saws which were the same gauge or thickness throughout the cutting edge, and five gauges thinner throughout all parts of the back. For example, a saw which was fourteen gauge on the breast was nineteen gauge on the back from end to end.

The present day method of grinding on spiral lines finishes these saws with an even gauge on the cutting edge, with six gauges of clearance at the center, and two or three gauges of clearance at the ends. This clearance is sufficient for all classes of sawing, and blades ground in this manner are stiffer and more durable.

It must be understood that only broad crosscut saws have six gauges of clearance, and that narrow saws are ground for clearance in proportion to their width.

THE RAKER TOOTH AND ITS FUNCTION.

Let us now consider the raker tooth and its function. As we have seen, the proper use of the raker tooth was not understood, and for a long time it was filed in such a way that it simply kept the cut free from the dust made by the cutting teeth. To state briefly the real function of the raker tooth, it must be understood that the teeth called cutting teeth are really scoring teeth which score or sever the fibers of the wood, leaving a core, which is planed out by the raker. In cutting hardwoods the scoring teeth do not sink to the same depth as in softwood, and, therefore, the bevel on the scoring or cutting teeth should be less acute. The raker must be shortened, so that it will plane out all of the core that the scoring teeth have left. If the rakers are too long an examination of the dust will show what is known as "whiskers" on the sawdust. This indicates that the raker is at work below the ability of the cutting teeth to score the fibers. It is in obtaining this nice balance between the bevel on the cutting teeth and the length of the rakers that the art of the filer is shown. When a saw is fitted properly for the kind of work it has to do, it cuts freely, and does not produce fine dust, but clean cut shavings.

TEMPERING THE SAWS.

Passing from the value of the shape of crosscut saw teeth and the methods of grinding, let us consider one of the most essential features of the modern crosscut saw, the temper. Old saw makers can readily recall making crosscut saws of untempered steel. I once knew a man who claimed to have used saws made of iron.

It is in the matter of temper that the greatest progress has been made. Without the present perfection in this particular, all other improvements would be of little value. The modern saw shop is equipped with many scientific appliances governing heat treatments which were not dreamed of thirty years ago. These insure a uniformity of temper not possible until recent years.

In our laboratory will be found devices which tell beyond the peradventure of a doubt the hardness, toughness, elasticity, strength and durability of the finished product. A large force is constantly employed to make analytical and

Digitized by Google

physical tests, not only of the finished saws, but of the materials entering into their construction.

While speaking of this, let me remind you that all steel used in Disston saws is made in the company's own steel works, which is an integral part of the factory. The Disston steel works have been foremost in producing a quality of metal best adapted for the work to be accomplished. In the Disston high grade crosscut saws will be found a grade of steel which is the result of many years of hard work and experimentation. This material, backed up by a tough, uniform temper, enables the cutter to carry back to the camp at night, after a hard day's work, a saw which is comparatively sharp.

A SUMMARY OF IMPROVEMENTS MADE.

Summing up the recent improvements in crosscut saws, we find a finer quality of steel, a tougher and more uniform temper, a better method of grinding for clearance, teeth better adapted to cutting all kinds of wood and a broader knowledge of the use of the raker.

Just here let me remind you, gentlemen, that the competent demonstrators sent into the woods by reliable saw makers give and receive information that is mutually beneficial. They bring to the factory the ideas of the users. Progressive sawmakers are always ready to avail themselves of any suggestions made for the improvement of their manufactures. It is, therefore, to your interest, gentlemen, to facilitate the work of these demonstrators by giving them free and easy access to your camps, for they do much to instruct the filers in the newest and most approved methods of keeping the saws in working order. Every improvement that leads to faster and better cutting means dollars and cents to you.

Finally, gentlemen, the improvements which have been made in crosscut saws should be accredited as much to the developments in the logging industry, promoted by your good selves, as to the endeavors of the sawmakers. You have been striving to do greater things and obtain more work per man from year to year. This progress has demanded a saw which would stand harder usage, and we, as sawmakers, have met this demand.

As a representative of the house of Henry Disston & Sons, Inc., let me thank each of you for the part you have played in this progress. It would give us a great deal of pleasure to have each and every one of you guests at our factory, to show you how a saw is made from beginning to end.

Main Line Logging Roads and Extensions

Advantage of Building Extensions in Advance of Operation

By S. M. ADAMS, Engineer, Kirby Lumber Co., Houston, Texas

Delivered at the Southern Logging Congress, New Orleans, La., October 25, 1916

Wonderful progress has been made during the past thirty years in the construction and operation of logging trams. Some years ago the word "trams" was a proper one to use; today railroads describe them better. Formerly pole roads with animals for motive power were used by lumbermen for hauling logs, the material for the construction of which could be cut from the right-of-way or nearby at very little cost. The greatest expense was wages paid for labor. The methods of construction was to select logs or poles suitable and of uniform size, peel them and lay them end to end. Usually they were laid with the butt ends all in one direction and with the tops lap-jointed to the butt of the next one. After laid, the poles were hewed on the inner face to reduce wheel flange friction, joints being hewed so that car wheels could pass over them easily. On hard ground poles were laid directly on the ground, which was either dug or filled so as to produce an even track.

On soft ground cross way logs notched to fit a circle of poles were placed six or eight feet apart, poles being fastened at joints to these by long wooden pins about two inches in diameter. Where cross way logs were not used, poles of straight track were held in place by stakes driven in the ground on the outside; at curves they were braced on the outside to trees and stumps. Geared locomotives were sometimes operated on these pole roads; such a machine would be a great curiosity today with its great cast iron concave-faced wheels, on axles made to admit of from four to six inches side play of wheels, to allow for variation in the width of gauge between the poles. Cars, of course, were of similar construction.

These trams were only practical to operate on fairly level ground, and generally used where logging operations were a great distance from the sawmill or main line of the railroad and logs were dumped into river or stream, rafted and floated or towed to mill.

Employes on pole roads worked on the eight-hour system, except that they worked eight hours before dinner and eight hours after. Next was the tram road with sawed wooden rails, which were in size from four by five to six by six inches and preferably of hardwood. Howsome pine rails were used; often these rails were made of two pieces of three by six, one spiked on top of the other, the object being to remove and renew the top rail when it had become badly worn.

These trams were usually well graded and stumps were removed from the road bed. Ties were sawn three or four inches thick and eight or ten inches wide, cut from rough top and red heart logs.

Such wooden trams used either animals or locomotives for motive power, according to the distance hauled or size of operation. Mills of about 70,000 feet daily capacity have been logged over such trams, the operation and maintenance of which was very expensive, because constant renewals were necessary and derailments frequent. It did not take long to learn that the cost of renewals plus loss caused by delay to operations on account of frequent derailments for a period of one year would almost meet first cost of steel rails, which gave much greater efficiency, although when steel railroads first became popular there was a tendency towards using rails that were entirely too light, some rails as light as 20 pounds to the yard being used. We now have logging railroads with 50 to 66 pound steel, and find that the cost of maintaining railroads laid with the heavier rail is very much less and the operation more satisfactory.

NEW CONDITIONS DEMAND NEW METHODS.

Taking the foregoing into consideration, we should undertake to determine whether or not we are pursuing the best, cheapest and most sensible plan in our present operations. Former practices have been abandoned; why? Because conditions have changed and because old methods have proved wasteful.

The matter under consideration at present is whether or not it is desirable and more economical to extend main lines of tramroads a considerable distance ahead of logging operations into the timber, say six months to one year in advance, or if it is the more sensible plan to extend main line from week to week and month to month as timber is being cut. No doubt sound reasons can be given for following either practice, but surely there is one best plan to follow, and the purpose is to invite an exchange of ideas and discussion to the end that thoughts may be expressed that will be of benefit to at least some of us and result in a saving or advantage to the several companies whom we serve.

How many know what it costs per acre or how much a mile it costs to clear and grub stumps in roadbed, for a right-of-way 30 feet wide? And how much it should cost?

How many know how much a cubic yard it costs to excavate—to build dumps and how much it costs a thousand feet or per lineal foot to build bridges? And how much it should cost. There are dependable figures as to how much it should cost, and it is often apparent that when putting your cull mules at work grading on spur track one day and on main line the next, that it is not possible to have such work done at the right figure or know what the exact figure is.

OPERATIONS MUST BE STARTED RIGHT.

After studying past conditions and old methods that have been abandoned, one can well imagine that it is as possible to improve existing methods as ever, but, unfortunately, it is a hard matter to get everyone to line up and pull together when trying to systematize an operation that has been conducted along lines not altogether in accordance with good practice and economy. The only way to get results is to start out right and to get co-operation all the way down the line.

To start right one has to begin at the first step in the operation; that is, location and construction of main line, and location and construction of switches, or spur tracks, both of which are important from the standpoints of first cost and expense of maintenance and operation. In level woods the employment of an engineer is not always necessary, unless to run levels, estimate cost of construction and to check up and see that cost is not exceeding estimate, or the reasonable amount for which such work should be done.

In a rough, hilly country, a capable engineer will always prove a good investment, provided he is a logging engineer and keeps in mind that the road is built for the purpose of getting out logs at reasonable cost, rather than establishing a pretty piece of track, level and without curves.

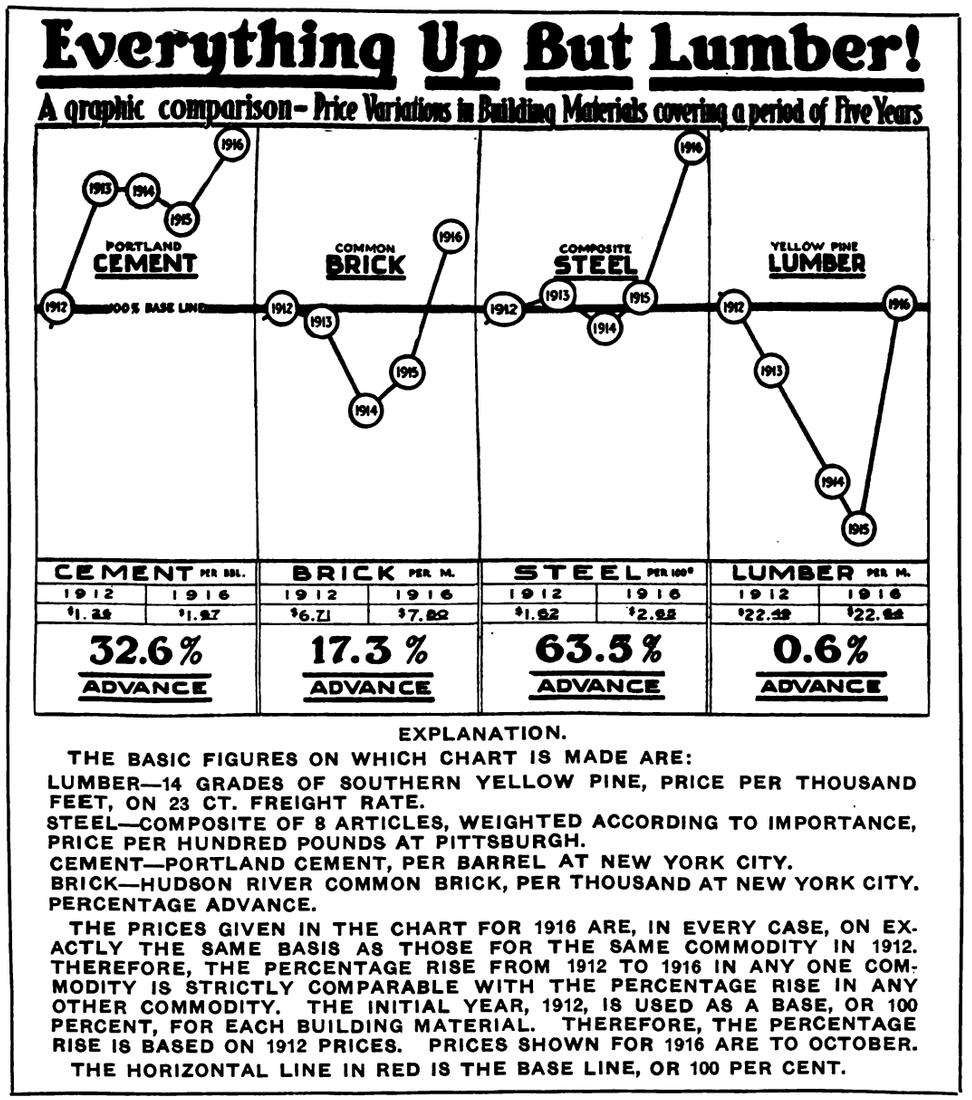
Digitized by Google

Few operations justify the expense of steady employment of an engineer, and it seems reasonable that if one is engaged to lay out and superintend the construction of main line, and grading spurs or switches, that a better grade line and roadbed can be had at less cost than if the work is done piecemeal under the supervision of those not understanding just where shovel men, wheel-barrows, slips or wheelers can be used to best advantage, according to the length of haul, etc., and check up from time to time and find out whether dirt is being moved at a cost not exceeding the established price that is recognized by best authorities.

PLANS SHOULD BE SYSTEMATIC.

The plan of the Kirby Lumber Co. is to figure a logging plan for each operation, covering requirements for several years. The timber estimates on the tracts under discussion arrived at, a survey of the several different routes into the particular tract is then made and estimates of the cost of these several different possible routes are calculated. The engineer then chooses what he considers the best and most practical line, both with a view of economy of construction and adaptation to best getting the timber out. The engineer then forwards maps, profiles and estimates covering the cost of construction of the line, accompanied by an estimate of the timber to be served by this particular main line, to the assistant general manager, after the superintendent of trams and logging has examined the data gathered by the engineer, and has concurred in the engineer's approval of the line selected. All data bearing on the subject are then gone over in the office of the general manager and, if approved, the auditor is advised of the amount of money necessary to construct the line. The auditor then charges the amount to a suspense account, which account carries all of the approved main line construction charges.

When logging operations begin over this main line the auditor charges out each month a pro rata amount of the actual cost of the main line; that is based upon the total cost of the line in relation to the total amount of timber to be moved. This pro rata is brought down to so much in dollars and cents a thousand feet log scale, and the amount charged out to the operation each month is equivalent to the amount of timber logged in that month by the pro rata a thousand previously arrived at, thus effecting a constant monthly charge against each separate logging operation in direct proportion to the amount of timber handled. This plan is in use on the ten different logging operations of the company.



EXPLANATION.

THE BASIC FIGURES ON WHICH CHART IS MADE ARE:

LUMBER—14 GRADES OF SOUTHERN YELLOW PINE, PRICE PER THOUSAND FEET, ON 23 CT. FREIGHT RATE.

STEEL—COMPOSITE OF 8 ARTICLES, WEIGHTED ACCORDING TO IMPORTANCE, PRICE PER HUNDRED POUNDS AT PITTSBURGH.

CEMENT—PORTLAND CEMENT, PER BARREL AT NEW YORK CITY.

BRICK—HUDSON RIVER COMMON BRICK, PER THOUSAND AT NEW YORK CITY.

PERCENTAGE ADVANCE.

THE PRICES GIVEN IN THE CHART FOR 1916 ARE, IN EVERY CASE, ON EXACTLY THE SAME BASIS AS THOSE FOR THE SAME COMMODITY IN 1912. THEREFORE, THE PERCENTAGE RISE FROM 1912 TO 1916 IN ANY ONE COMMODITY IS STRICTLY COMPARABLE WITH THE PERCENTAGE RISE IN ANY OTHER COMMODITY. THE INITIAL YEAR, 1912, IS USED AS A BASE, OR 100 PERCENT, FOR EACH BUILDING MATERIAL. THEREFORE, THE PERCENTAGE RISE IS BASED ON 1912 PRICES. PRICES SHOWN FOR 1916 ARE TO OCTOBER.

THE HORIZONTAL LINE IN RED IS THE BASE LINE, OR 100 PER CENT.

METHOD OF CONSTRUCTION.

The actual construction of all main lines is generally performed by contract, the company having a general contractor who performs the work under the direction and supervision of the engineer, the average cost being about $50 an acre for clearing and $40 for grubbing and 20 cents a cubic yard for grading. The average cost of the bridging ranges from 50 cents a lineal foot for low bridges to $1 a lineal foot for high pile bridges, the class of the structures being determined by the life and extent of the operation figured for the particular line. For short life lines, logs from the right-of-way are used, with no preference for species, the only requirement being size and strength. These logs are flattened on two sides and are not peeled. Where an operation is to extend over a period of several years, frame bridges are built of either sawn or hewn long leaf pine and pile bridges of peeled oak or long leaf pine piling, with decking of long leaf pine.

Track laying and surfacing is performed by company forces under the direction of the woods superintendent, the engineer having actual oversight of the work. The engineer reports weekly to the assistant general manager upon progress being made on each operation. The general contractor is given monthly estimates covering work on each operation.

ADVANTAGES OF THIS METHOD.

One large advantage of handling each operation as outlined is that it binds all concerned to a well thought out general plan for each separate logging operation. The woods superintendent is relieved of the burden of having to extend his main line bit by bit and has only to stake out his temporary spurs from a known and actually constructed main line. He is thus enabled to keep his grading and steel laying forces at a fairly constant strength, and has the advantage of being able to quickly change his entire operation from a territory affected by bad weather to one not so affected. The woods superintendent can also figure his logging spurs a long way ahead, because his main line is definitely located. Again, the line is constructed with a uniform degree of curvature and gradient. On lines extending over a considerable mileage and a long operation, the curvature is held to four degrees, or a change of approximately three and one-half feet in each hundred feet of line, and the rise in grades, against the loads, to two feet rise in each hundred, or a 2 percent grade. The known grade and curvature, and the amount of work to be performed in hauling logs over each main line enables the determination of the proper equipment to be assigned to that particular operation in the way of motive power and rolling stock.

A SUMMARY OF BENEFITS.

Thus are the woods superintendent's duties considerably lightened, giving him more time to devote to his actual logging operation with all the advantages accruing from a preconceived plan.

In the past each separate camp has been compelled to keep grading crews of sufficient strength and size to handle all main line construction, and as all these were governed by the timber stand and physical characteristics of the country traversed, the amount of main line grading work fluctuated and quite often expediency had to govern the operations of these forces with little regard for expense. Under a uniform contract covering the entire system, and the opportunity offered to plan ahead, this objectionable feature is eliminated and the unit cost of all work has been made uniform.

The general officers of the company, through the medium of the reports on the various projects accompanied by maps of the area to be developed and other data, are enabled to get a much closer grasp upon the general situation facing each camp.

In summing up the benefits that we expect to obtain through the adoption of the system outlined are: Economy of operation, lower first cost and greater efficiency.

Observations in the Realm of the Retailer

A Seven Room House to Cost About $5,000

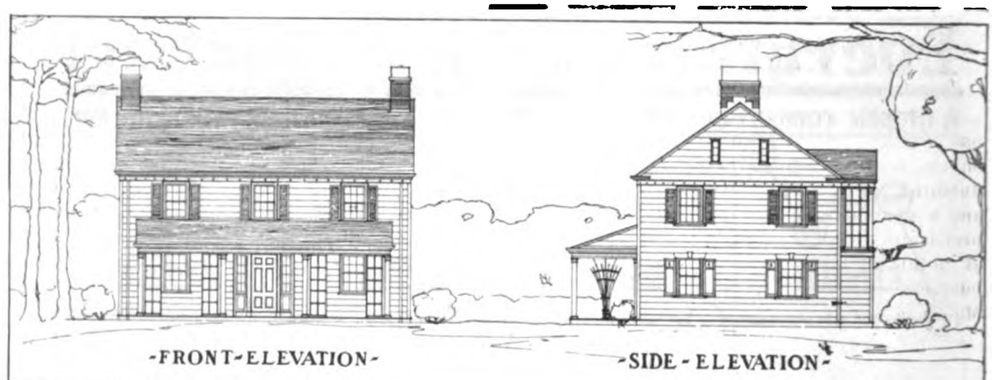
A SERIES OF ARCHITECTURAL DESIGNS OF HOUSES PLANNED TO BE BUILT OF ARKANSAS SOFT PINE.

Recently the Arkansas Soft Pine Bureau issued through the medium of the press of the American Lithograph Co., one of the most beautiful architectural books which has ever been given out to the lumber trade of America, entitled "NOT A HOUSE BUT A HOME," and containing a number of house plans designed by the well-known architect, Aymar Embury II, of New York.

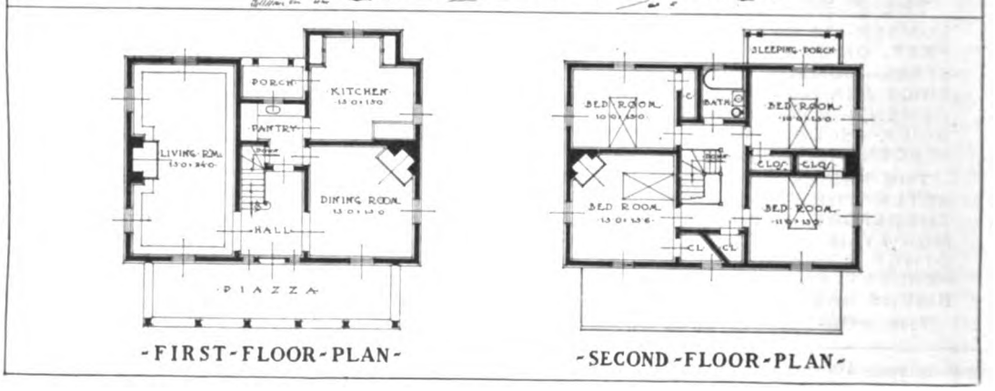
Through the courtesy of R. H. Brooks, who has charge of the advertising of the Bureau, we have secured the privilege of republishing these designs in the LUMBER WORLD REVIEW, and we are running them in our general department, "Observations in the Realm of the Retailer," believing that if there is one thing in which all retail lumbermen MUST be interested it is in SUCH a series of PLANS, and we want to suggest that every retail lumberman who receives the LUMBER WORLD REVIEW file away the copies which contain these plans.

We do not know whether "Not a House But a Home" is out of print or not, but it probably is; and if that be true this may be the only opportunity there is to secure these etchings of the house plans.

EDITOR.



-FRONT-ELEVATION- -SIDE-ELEVATION-



-FIRST-FLOOR-PLAN- -SECOND-FLOOR-PLAN-

This house is designed along the simple Colonial lines common to all small houses from New England to Georgia. While the house is placed the broad way to the street, it is adjusted to a narrow lot, because the piazza is placed on the street side, and while this piazza has combined the dual functions of an entry porch and sitting room, it is nevertheless wide enough to be a comfortable sitting room.

The plan is in principle similar to that of the $3,500 house shown November 25, but expanded to larger dimensions with better sized rooms throughout, more spacious hall and better arrangement of kitchen, pantry, etc.

The simplicity of the house makes it very economical to construct, but if this house is to be as successful in appearance when actually built as it is in the drawings the shapes of the roofs, wall surface, and windows as shown on the elevations must be very carefully adhered to, and the detail should be followed as closely as possible. Very broad over-hanging cornice and a steeper roof would utterly ruin the effect of the house, and it is again recommended that any intending house builder liking this design should carefully study the details.

There will be a cellar under the entire house, containing heating plant and such other accessories as are usually included in a cellar.

The walls would be of frame construction plastered on the interior and clapboarded on the exterior. The roof would be of shingles, and the cornice would have box gutters and tin leaders. The house should be painted white with green blinds, with a dull brown or pale green roof. The question of the color of the roof is a very important one, since a brilliant or heavy color will make the house top-heavy in appearance.

The staircase should be attractive since it is seen from the side, and it is recommended that turned spindles and small newels, not larger than 4 inches in diameter be used.

Table of Carpenter Material.

NOTE—All amounts given do not allow for waste. Where there is doubt about widths of material the areas to be covered are given in square feet. Trim should be allowed for both sides for all openings.

Lumber.

*Framing (joists, studs, etc)	12,000 ft. B. M.
*Sheathing, rough floors, etc	5,075 sq. ft.
*Clapboards	3,325 sq. ft.
*Shingle strips	3,648 lin. ft.
Shingles for roofs	12,000
*Ceiling (porches)	255 sq. ft.
*Flooring (porches)	320 sq. ft.
*Flooring (finish)	1,715 sq. ft.

Millwork.

*Main cornice with rosettes	80 lin. ft.
*Belt course with rosettes	50 lin. ft.
*Rake cornice	64 lin. ft.
*Porch and piazza cornice	107 lin. ft.
*Porch and rake cornice	35 lin. ft.
*Water table	150 lin. ft.
*Porch columns, six, 7 in. x 7 in. x 7 ft. 9 in.	
*Porch pilasters, four 2 in. x 7 in. x 7 ft. 9 in.	
*Lattice, 10 pieces, 2 ft. x 7 ft. 9 in.	
*Lattice, 2 pieces, fan shaped.	
Windows, cellar	4
Windows, D. H.	19
Windows, attic casement	4
Blinds, pairs	19
Doors, with side lights	2
Doors, interior	16
*Trimmed openings	2
*Base	480 lin. ft.
*Picture mold	390 lin. ft.
*Stairs (service), cellar to second floor.	
*Stairs, main, first to second floor.	

Fitting Up.

*Cellar partitions.	
*Shelving, cellar and closets.	
*Dressers	3
*Drainboards	2

Digitized by Google

*Mantels	3

*Materials noted with asterisk should be of Arkansas Soft Pine.

Summary Estimate.

Excavation	$ 125
Mason	725
Plaster	510
Rough Carpenter Work	1,350
Finish Carpenter Work	1,095
Painting	470
Plumbing	325
Heating	300
Electric Work	100
Total	$5,000

Drawings are to the scale of 1/16"-1'0".

Doors, Sash and General Millwork Review

Current Conditions of the Country's Market

By LUCIUS E. FULLER

Demand for all classes of mill work has kept up remarkably well this month in practically all localities. Favorable weather has been responsible for some of this demand, but within the last week or two the weather in the north has changed for the worse and trade is now on the regular winter basis. This means the finishing up of orders carried over from fall and a general cleaning up of business in hand preparatory to the inventory and repair work at holiday time. However, the prospects for business after the first of the year are good. Many orders are still in abeyance and the tendency of the building trade is toward renewed activity. There has not been the let up in building operations such as is usually observed with the approach of cold weather and the present situation is encouraging to an unusual degree. No heavy surplus of stock items exists at the factories or in distributing hands and there is an unfilled requirement for special work of all kinds. Inquiries are numerous in the principal factory centers and much figuring is going among the estimators. This undoubtedly presages moderate activity, if not something more, directly after the middle of January.

Shop Lumber Active.

There are two principal considerations in the market for factory plank, one being that the supply of the three shop grades is exceedingly restricted and the other that prices are so decidedly on a higher drift that there is very little satisfaction in buying. Granted that the lumber would be available and that prices were not greatly out of line, there would still be the question of cars and these are not available at any of the pine producing or shipping centers. No. 1 and No. 2 shop common, in 5-4, 6-4 and 8-4, are items that are almost impossible to obtain in measurable quantity. Offerings that have been made this week on No. 1 shop common, 5-4 and 6-4 are not less than $41 in Western pine, $43 in Idaho pine and as high as $52 for northern soft pine. There is a considerable variation in the values of No. 2 and No. 3 shop as between the western and northern stocks, but it is noted that the northern material is bringing the better prices whenever it is available and that there is no lack of buying even at the spread. For instance, in northern pine, 5-4 and 6-4 No. 2 shop have been held at $43, as compared with $35 for western stock, while No. 3 shop is quoted at $32 as compared with $25 for western.

The Car Shortage and the Door Trade.

The committee on relations between railroads of the American Railway Association announced on December 19 that the shortage of freight cars over the country December 1 totalled 105,527. This is 3,000 less shortage than was reported on November 1, and indicates a tendency toward a more plentiful supply of freight cars this winter.

A Chicago sash and door manufacturer reports that desiring to ship a car of his product to a Michigan point this week, he secured the empty and loaded the car, but the railroad company refused to accept it, stating that it had not the motive power with which to move it. The company also said it had 1,500 loaded cars of freight in its Chicago yards which it was unable to move. The same sash and door company has several cars of millwork for New England points, but cannot ship them as all freight for points east of New York is embargoed.

The Market for Window Glass.

It is reported that the window glass factories are running at capacity wherever possible and have enough orders on hand to keep them busy for from two to three months. Stocks on hand at the factories and jobbing warehouses are extremely low and the greatest pressure exerted on the manufacturing facilities does not enable them to cope with the situation. Building operations have been unusually heavy throughout the country this fall and also there has been a very fair demand for exportation, so that stocks of window glass were dissipated almost before the trade became aware of the fact.

It is now believed that there will be considerable difficulty experienced through the winter by the factories using natural gas and many of them have been already hampered in their operations, some having been obliged to close down. Should the weather be reasonably cold this winter, it is believed that this feature will become a more serious one than has been yet disclosed. That is not the only difficulty, either, for a scarcity of labor has developed in the window glass manufacturing centers and owing to these two important reasons, it is likely that stocks of window glass will continue low and assortments broken, even under a period of light consumption. Last year was the heaviest window glass year ever known, the production exceeding by 30 percent any previous record, but consumption has evidently kept pace, for factory stocks were well cleaned up before the present fire started.

Middle Northwestern Trade.

The storm door and window trade has been the principal feature of demand in the middle northwest, but there is still trade in regular goods for local distribution for use in completing structures and this makes up a fairly satisfactory business. Extremely cold weather toward the middle of the month shut off all retail trade worth mentioning, but the retailers are looking forward to an early opening up of business after the backbone of winter shall be broken. Prices are holding with firmness. In fact, there are many who believe that in view of the high cost of raw material there will have to be further advances made in the discounts before spring trade opens.

Southwestern Trade Report.

Lately there has been excessive cold in the southwest and this has shut off business in that territory to a considerable extent and not more than a desultory demand is looked for in the next month or two. In fact, there is usually little doing at Kansas City or any of the southwestern centers around Christmas week. The advent of the convention season early next month, it is believed, will usher in spring buying in good volume. Prices have been unusually strong and there is a decidedly firm tendency. St. Louis houses report that they are having a good inquiry right along and while outside trade has slowed up lately owing to adverse weather, there is still a good inquiry for local delivery and the demand is expected to continue unabated after the first of the year.

Dull Period on the West Coast.

The end of the year has disclosed a considerable falling off in sash and door operations on the west coast, in the fir as well as in the pine door section. There has been a very unsatisfactory eastern business for some time, due largely to the fact that cars were almost unobtainable and buyers were not anxious to place renewed orders when they could not get what they had already ordered. This has caused more or less inconvenience at many of the plants where room was not available for stocks that were awaiting shipment.

Demand for mill work in the San Francisco district is hardly up to expectations, although it is also hampered by car shortage as in the north. Operations have ceased at the white pine sawmills and stocks for re-manufacture are not easily obtainable. On this account some of the factories are expecting to shut down until the material supply is better. Prices on the coast are fairly good as far as stock items are concerned, but competition has reduced the prices on odd work to non-profitable figures.

Features of Eastern Trade.

Local business, generally speaking, has been fair throughout the several eastern centers, especially at Pittsburgh, Philadelphia and Baltimore, where demand has even exceeded that shown in the west. At New York, however, building operations appear to have slumped considerably and the call for mill work is not nearly as strong. Buffalo operators report a fair demand in that city and surrounding territory. Notable improvement has been effected in prices at practically all of these centers, as the mill men were quick to feel the effect of the advance in raw materials and realized the necessity of protecting themselves against it pronto.

General News of Associations and Clubs

LARGE ATTENDANCE EXPECTED AT ANNUAL MEETING OF GUM MANUFACTURERS.

Memphis, Tenn., Dec. 18.—John M Pritchard, secretary of the Gum Lumber Manufacturers' Association, says that the attendance at the forthcoming annual meeting, to be held in Memphis, January 20, will be more largely attended, in his opinion, than any meeting of the association in its history.

Mr. Pritchard said today, as evidencing the effectiveness of the work of the association, that sales of gum lumber made by members during the past month showed a very handsome increase over the preceding month, and that they were by far the largest ever recorded within the brief space of thirty days. He also said that the demand continued of very satisfactory proportions, and that the prospects were for a big turn over during December.

No set program has been arranged for the annual meeting, according to Mr. Pritchard. It will last only one day, and the time will be taken up largely with the reports of officers and standing and special committees. A particularly interesting report is expected from the Technical Research committee, of which R. M. Carrier, Sardis, Miss., is chairman. This committee has arranged with Prof. Tiemann, of the Forest Products Laboratory, United States Department of Agriculture, at Madison, Wis., to make a report on the tests made by him with air dried and green gum lumber, furnished him by members of the association. It is known that the experiments made by Prof. Tiemann have been highly successful in kiln drying lumber, and it is anticipated that his report will be not only of great interest, but also of unusual value to those who are so fortunate as to be present.

The association has had a great year in many respects, but its growth in membership has been one of its most remarkable features, with the result that the report of the membership committee is awaited with unusual interest.

Secretary Pritchard announced today that the association had already decided upon a successor to J. T. Kendall, assistant secretary, who has been elected secretary of the American Oak Manufacturers' Association. He said, however, that the name of this gentleman would, for business reasons, be withheld until January 1, when he assumes his duties.

AMERICAN OAK MANUFACTURERS.

A called meeting of the newly organized American Oak Manufacturers' Association will be held at the Hotel Chisca, Memphis, Tenn., Friday, January 19, 1917. President E. A. Lang announces that at this meeting all the details regarding the organization of the association will be completed. The officers and the committee will report progress made since the last meeting and plans will be adopted for carrying out aggressively the purposes of the association. M. B. Cooper, of Memphis, chairman of the membership committee, has sent out a letter to each manufacturer of oak lumber in the country as far as could be ascertained. This letter sets forth the conditions prevalent in the manufacture of oak and urges the co-operation of all, that oak may be again lifted to the high position to which it is entitled.

INDIANA HARDWOOD LUMBERMEN.

Secretary Edgar Richardson, of Indianapolis, announces that the annual meeting of the Indiana Hardwood Lumbermen's Association will be held at the Claypool hotel, Indianapolis, on Wednesday, January 17. The session will be called to order at 2 p. m. and the annual banquet will be held in the Riley room of the hotel at 7 o'clock. As usual these events are regarded by lumbermen over the country as a sort of homecoming for some of the lumbermen who successfully made their escape from Indiana in the earlier years of the industry and have since attained eminence in other fields. Invariably a large number of the "old boys" are present at these gatherings.

CONVENTION DATES.

December 29 — West Coast Lumbermen's Association, New Washington Hotel, Seattle, Wash. Monthly meeting.

December 30 — Mississippi Valley Lumber & Sash & Door Salesmen's Association, West Hotel, Minneapolis, Minn. Annual meeting.

January 1 — Western Carolina Lumber & Timber Association, Asheville, N. C. Annual meeting.

January 5 — Shingle branch of the West Coast Lumbermen's Association, New Washington Hotel, Seattle, Wash. Annual meeting.

January 16-18—Northwestern Lumbermen's Association, Court House, Minneapolis, Minn. Annual meeting.

January 17—Indiana Hardwood Lumbermen's Association, Indianapolis, Ind. Annual meeting.

January 17-18 — North Carolina Pine Association, Monticello Hotel, Norfolk, Va. Monthly meeting.

January 18—Southern Hardwood Traffic Association, Memphis, Tenn. Annual meeting.

January 19—American Oak Manufacturers' Association, Memphis, Tenn. Annual meeting.

January 18-19—Southern Illinois Retail Lumber Dealers' Association, Armory, Cairo, Ill. Annual meeting.

January 18-19—American Forestry Association, Willard Hotel, Washington, D. C. Annual meeting.

January 20—Gum Lumber Manufacturers' Association, Memphis, Tenn. Annual meeting.

January 23-24—Retail Lumber Dealers' Association of Indiana, Claypool Hotel, Indianapolis, Ind. Annual meeting.

January 23-24-25—Mountain States Lumber Dealers' Association, Brown Palace Hotel, Denver, Colo. Annual meeting.

January 23-25—Empire State Association of Wholesale Lumber & Sash & Door Salesmen of the State of New York, Onondaga Hotel, Syracuse, N. Y. Annual meeting.

January 24—National Lumber Exporters' Association, Pittsburgh, Pa. Annual meeting.

January 24-25—Retail Lumber Dealers' Association of the State of New York, Onondaga Hotel, Syracuse, N. Y. Annual meeting.

January 24-25—North Carolina Forestry Association, Raleigh, N. Car. Annual Meeting.

January 24-26—Western Retail Lumbermen's Association, (Canadian) Winnipeg, Man. Annual meeting.

January 24-26—Ohio Association of Retail Lumber Dealers, Deshler Hotel, Columbus, Ohio. Annual meeting.

January 24-25 — Pennsylvania Lumbermen's Association, Hotel Walton, Philadelphia, Pa. Annual meeting.

January 24-26—Union Association of Lumber & Sash & Door Salesmen, Hotel Deshler, Columbus, Ohio. Annual meeting.

January 24-26, 1917—Southwestern Lumbermen's Association, Muehlebach Hotel, Kansas City, Mo. Annual Meeting.

January 25-26—Northern Hemlock & Hardwood Manufacturers' Association, Hotel Pfister, Milwaukee, Wis. Annual meeting.

January 25-27 — National Foreign Trade Council, William Penn Hotel, Pittsburgh, Pa. Annual meeting.

January 30-31—Hardwood Manufacturers Association of the United States, Hotel Sinton, Cincinnati, Ohio. Annual meeting.

January 30-31—Northern White Cedar Association, Hotel Radisson, Minneapolis, Minn. Annual meeting.

January 31-February 1-2—Chamber of Commerce of the United States of America, New Willard Hotel, Washington, D. C. Annual meeting.

February 1-2 — Southeastern Iowa Retail Lumbermen's Association, Hotel Burlington, Burlington, Iowa. Annual meeting.

February 1-3 — West Virginia Lumber & Builders' & Supply Dealers' Association, Ruffner Hotel, Charleston, W. Va. Annual meeting.

February 7-8—Retail Lumber Dealers' Association of Pennsylvania, Fort Pitt Hotel, Pittsburgh, Pa. Annual meeting.

February 7-8-9—Nebraska Lumber Dealers' Association, Hotel Rome, Omaha, Neb. Annual meeting.

February 7-9—National Association of Box Manufacturers, Hotel LaSalle, Chicago, Ill. Annual meeting.

February 6-7 — Michigan Retail Lumber Dealers' Association, Hotel Statler, Detroit, Mich. Annual meeting.

February 6-7 — Southern Pine Association, New Orleans, La. Annual meeting.

February 7-8 — Kentucky Retail Lumber Dealers' Association, Phoenix Hotel, Lexington, Ky. Annual meeting.

February 11-12—National Builders' Supply Association, Hotel Sherman, Chicago, Ill. Annual meeting.

February 14-16—Western Retail Lumbermens' Association, Hotel Davenport, Spokane, Wash. Annual meeting.

February 14-16—Illinois Lumber & Builders' Supply Dealers' Association, Hotel Sherman, Chicago. Annual meeting.

February 20-21—North Dakota Retail Lumbermen's Association, Fargo, N. D. Annual meeting.

February 20—Lumber Dealers' Association of Connecticut, Hotel Taft, New Haven. Annnual meeting.

February 20-22—Wisconsin Retail Lumber Dealers' Association, Hotel Pfister, Milwaukee, Wis. Annual meeting.

March 12-13—Northern Idaho Forestry Association, Spokane, Wash. Annual meeting.

March 21-22 — National Wholesale Lumber Dealers' Association, Pittsburgh, Pa. Annual meeting.

April 10—Lumbermen's Association of Texas, Galveston, Texas. Annual meeting.

HARDWOOD MANUFACTURERS' MEETING.

A meeting of the board of governors of the Hardwood Manufacturers' Association of the United States was held at the Hotel Sinton, Cincinnati, December 15, with the following members in attendance: B. B. Burns, president; R. H. Vansant, Leon Isaacson, J. W. Mayhew, W. E. DeLaney, R. M. Carrier, R. L. Hutchinson, J. W. Stark, E. O. Robinson, F. R. Gadd, E. A. Lang, J. H. Himmelberger, E. M. Vestal, Secretary W. H. Weller.

Considerable attention was given at the meeting to the arrangement of the program for the annual meeting of the association, which will be held at Cincinnati on January 30 and 31. It is expected that several speakers of national reputation, in as well as out of the lumber trade, will be on the program.

W. E. DeLaney, chairman of the executive grading committee, reported that he had prepared a rule for a select grade of oak which would be presented for adoption at the January meeting. This is sure to cause considerable interest at the gathering and will be an important feature for discussion.

NORTHERN SALESMEN HOLD CONVENTION

Gathering Attended by Many Representative Lumbermen.—Two Days of Instructive Addresses—Royal Hospitality Extended by Merrill Lumbermen

Probably a more representative gathering of northern lumbermen never assembled than that which recently honored Merrill, Wis., in a three days' visit, comprising Friday, Saturday and Sunday, December 8, 9 and 10. The meeting was representative in that practically all departments of the northern trade participated, but the one word—salesmanship—was the keynote of the entire affair.

The conference was arranged for under the auspices of the Northern Hemlock & Hardwood Manufacturers' Association and J. T. Phillips, president of that body, called the convention to order Friday afternoon, belated trains having interfered with the arrival of many of the lumbermen in time for holding a morning session. Mr. Phillips gave a brief statement as to the character and purpose of the conference and introduced George C. Robson, sales manger of the Kinzel Lumber Co., of Merrill, and chairman of the sales managers committee, which was directly responsible for the gathering. Mr. Robson was made the permanent chairman of the meeting. He delivered an address of welcome, in which he said that the purpose of the gathering was conveyed in its title, the Northern Lumbermen's Salesmanship Conference. He recommended as a motto for the gathering the word "Enthusiasm" and predicted that the conference would mark an epoch in the annals of northern lumber.

MR. FOX MAKES ADDRESS.

M. J. Fox, manager of the Von Platen Lumber Co., Iron Mountain, Mich., spoke to the subject "What I Think About It." He opened his address by stating that a celebrated artist was once asked what he mixed with his paints to make such beautiful colors in his pictures and his answer was, brains. In applying this to the present situation in lumber, Mr. Fox doubted that the lumbermen had been using their brains when they have sold their product at or below cost of production and running their plants overtime on a declining market. He believed that the lumber manufacturer was entitled to a fair profit on his product for his time, and for money invested. The lumberman had been confronted with the proposition of selling their product below cost of production, which had been the result of competition of other woods, importation of cheap lumber from Canada, and the competition of substitutes. In his opinion the province of the salesman was very much involved with the securing of better prices. Every department of the industry should work harmoniously with all the others and in closing he suggested a slogan for the meeting in the Golden Rule, "Let us do unto others as we would that they should do unto us."

MR. BUTTS ON SCIENTIFIC SALESMANSHIP.

H. H. Butts, sales manager of the Park Falls Lumber Co., Park Falls, Wis., defined what salesmanship is and stated that a good system of doing business did not alone insure success. A water logged scow in the hands of a master pilot might fare better in the storm than a twin screw ocean liner manned by incompetents; hence one could not set the helm of his business barge in a fixed direction and expect to be guided into the harbor of success. It is something that requires the most skillful piloting. Salesmanship is the result of a growing need for training the faculties with the view of making it a practical department of business rather than a pastime. In his opinion there is no pursuit in life that offers greater opportunities for intelligent and scientific management. The primary requisite is the knowledge of the products that are sold and this involves every phase of the undertaking. The time is past when a glib tongue and a doubtful personality can secure the confidence of the buyer. He told of the requisites of the sales manager, of the law of psychology as applied to the one of offering goods. One great essential, he thought, is a card index giving the name of every buyer in the salesmen's territory and his requirements. He recommended close observation of the market, including a study of conditions that might develop new uses for the product. Courtesy he named as a leading essential. In conclusion Mr. Butts addressed himself particularly to the manufacturer, to whom he made suggestions as to the handling of his product through the salesman.

Mr. Butts' paper led to quite a discussion, among those who participated being George H. Chapman. general manager of the Northwestern Lumber Co., Stanley, Wis.; Murdock MacLeod, sales manager of the Oconto Co., Chicago; Charles F. Rea, sales manager of the Sawyer-Goodman Co., Marinette, Wis., and J. H. Reiser, of Wausau.

MR. OSBORN ON LUMBER SELLING.

A. L. Osborn, president of the Medford Lumber Co., Medford, Wis., and also of the Scott-Howe Lumber Co., Oshkosh, has for his subject "The Selling of Lumber, Past, Present and Future." Mr. Osborn's remarks are invariably concise and direct to the point and he presented some splendid thoughts in this paper. He said that the selling end of the lumber game in the past has had too little to say about what should be done in the woods and about the sawmills and in an illustrative way said that "salesmen have found on their stock sheets that they are expected to get rid of stub-tailed yellow dogs, when the demand has been for sleek, smooth Boston terriers." He told of the origin and progress of lumber grading, which had been a determining factor in procuring better results for stumpage. He recommended that the salesman in his rounds endeavor to ascertain what the final use of the product will be. He concluded: "We have come out of the cave life of ruthless competition into the sunlight of co-operation. We have learned that our neighbor, like ourselves, is human, and makes mistakes and I must confess it that he is sometimes still selfish, but on the whole he is doing the very best he can, and he is ready and willing to help his neighbor; and we are all seeing more and more clearly the great and eternal values in our business. We are learning to love our neighbor. Faith in him is growing, charity in judgment we are giving, and as we go on in the future struggle to be better and more efficient lumber merchants, we can and must remember that we can only win in this fight if we bear a banner inscribed with faith, and hope, and love."

SECRETARY SWAN ON DURABILITY OF WOODS.

Secretary O. T. Swan, of the Northern Hemlock & Hardwood Manufacturers' Association, who is a thoroughly scientific forester, read a paper on "The Relative Durability of Woods" and illustrated it by the use of lantern slides. He spoke of the experiments made by the Forest Products Laboratory at Madison with regard to wood durability and said that it was a fact that woods would ordinarily last longer when used under the same climatic conditions as those in which they grew. He described the causes of decay and told how the wood may be treated so that it would not decay. He summarized his statements in the following:

"1. Discussions of relative durability are usually too assortive and seldom compare two woods on the same basis.

"2. The confusion of species sold under common trade names leads to errors in common statements of durability.

"3. Resistance to decay varies in the same species to a considerable extent.

"4. Hemlock is a moderately durable wood under severe conditions and gives long life in the forms of service to which it ordinarily is applied. It is capable of a broader field of use if treated with wood preservatives. As a single species it has more uniformity than the timber of its chief competitors in this market. It is not as durable in the broad sense as selected material from some other species, but it is more durable than other material from the same species, and when both are selected it is on a fair competitive basis for its ordinary uses.

"5. In contact with the soil, in moist factory buildings, for use in silos and for similar service, hemlock and other woods should be treated with a wood preservative.

"6. Since wood preservatives widen the market, not only for hemlock but for some of our hardwoods, we should encourage their use and their availability through the retail trade."

MR. WILBER ON "THE SALESMAN'S SIDE."

Harry Wilber, of Milwaukee, who is the president of the Northwestern Traveling Lumber & Sash & Door Salesmen's Association, and selling representative of the Brooks & Ross Lumber Co., of Schofield, Wis., had for his subject "The Salesman's Side of the Selling Problem." Mr. Wilber told of some of the disadvantages under which the salesman labored, of some of the short-comings of the lumber salesman and of some of the things that are lacking at the general office. He said that it was very essential that harmony should prevail between all the different departments and that inspectors and shippers should act a little on their own initiative in rectifying errors in the sawmill and planing mill departments. He said that the aim of both the manufacturer and the salesman should be to obtain a standard price with the best producers and not merely to sell lumber at a little less price than your competitor sells, which does not require any ability on the part of the salesman. He spoke of the change that had taken place among retailers, who today no longer stays in his office and waits for business to come to him, but goes out after the trade, makes a study of his customers' requirements and is in close touch with them at all times.

MR. KLASS SPEAKS ON EFFICIENCY

Alfred Klass, sales manager of the Holt Lumber Co., spoke on the subject, "How the Work of the Sales Managers' Committee Can Be Put on the Most Efficient Basis." He told of what is expected of the sales managers' committee in compiling statistical reports and building a composite picture of the lumber market in all of its aspects, and pointing out the tendency of market conditions. He spoke of the information needed as being (1) the securing of actual selling prices; (2) the judgment of the people from whom this information is secured, of the value of the different items; (3) ascertaining the selling price of hemlock at representative points and the current prices on competitive woods at those points, also similar information on birch, red gum and other hardwoods; (4) analysis of stocks on hand, cut and shipments; (5) knowledge of the stock and shipment conditions of competing woods. He also suggested what might be ventured upon in the way of gathering conditions at retail points and involving mail order competition. He urged the importance to the members of the organization of attending all of the meetings.

MR. ROBSON PRESENTS SALES MANAGER'S SIDE.

Chairman George C. Robson, in speaking on the subject of "The Sales Manager's Side of the Selling Problem," stated that no phase of the lumber industry has ever gone through such a radical evolution of change as the sales department is experiencing at the present time. Up to recent date, the sales manager in a hemlock and hardwood mill was more or less of a figurehead and a broad knowledge of the lumber industry was not expected of him. His selling policy was outlined by his employer and the latter looked upon the sales department as one of the least important of any. Lately the manufacturer had found that he must do something with his sales organization on account of the inroads of substitutes and the greater efficiency of the selling methods adopted by the manufacturers of the substitutes.

Mr. Robson suggested that the manufacturers should give their sales departments a wider latitude, take the salesmen into their confidence and consider their suggestions and encourage them to study the industry. In conclusion, he said: "If you expect to be a part of the successful sales organization of the future, you must of necessity assume new responsibilities; you must broaden out to the widest scope possible your knowledge of each phase of the lumber industry from the tree to the consumer, for your employers are going to look to you for more results. If you expect to keep up with the new conditions of merchandising in the lumber sales world, you must awaken, brush the cobwebs from your vision and study and accomplish the same results that others are successfully doing in other lines of business."

Digitized by Google

THE SESSION ON SATURDAY.

The first subject to be discussed at the Saturday session was "Transportation in Modern Business" by F. M. Ducker, traffic manager of the Northern Hemlock & Hardwood Manufacturers' Association. Mr. Ducker thoroughly explained the method of building rate structures and the great influence that lumber rates had on the distribution of the products, with special application to the situation in the northern woods.

MR DEWEY ON "THE MANUFACTURER'S SIDE."

Harry S. Dewey, one of the best known lumber representatives in the north and for the last year or two associated with the Edward Hines Lumber Co., of Chicago, had for his subject, "The Manufacturer's Side of the Selling Problem," a subject which had been assigned to Edward Hines, but that gentleman was unable to be present. Mr. Dewey expressed some disappointment that better progress had not been made in improving the sales end of the lumber industry. The trouble was that lumbermen had been working too much at cross purposes, were not organized and did not have the get-together spirit. He thought that the essentials required for a twentieth century sales manager were knowledge, imagination and a love of work. He must know and believe in his goods; should have knowledge of how timber grows and how it is felled and cut into saw logs and how the logs are manufactured to the best advantage. He must know various conditions in different markets and the reasons for such conditions and should not overlook an effort to create friendly feelings between buyer and seller. He said: "One of the chief attributes which salesmen or sales managers must have is loyalty developed to a high degree. The sales manager must be enthusiastic in his loyalty to his employer and to his task; and every bit as important is the loyalty of the employer to the employee." He complimented the sales managers' committee and said that he felt an added interest in impressing upon employers at the head of various lumber manufacturing institutions in the north the real necessity of a downright recognition of the efforts of the sales managers.

MR. BREINIG ON "BEAUTIFUL 'BIRCH."

D. E. Breinig, of the Bridgeport Wood Finishing Co., New Milford, Conn., spoke on his favorite subject "Beautiful Birch—How to Make It More Beautiful." Mr. Breinig is an expert on wood finishing, and illustrated his talk with examples of birch finished in several different colors. He spoke of the widening use of birch for interior finish and related the possibilities of increasing its use by proper staining, which would make it one of the most attractive woods known in interior decoration.

THE RETAILER'S SIDE OF THE PROBLEM.

Otto J. Lay, of the H. J. Lay Lumber Co., of Kewaskum, Wis., spoke on "The Retailer's Side of the Selling Problem." Mr. Lay recited many faults in the manufacturing and marketing of northern lumber as observed by the retailers. His remarks were rather of a critical character, but he brought out some very good points and made suggestions for promoting a better understanding between the manufacturer and the retailer, and this he thought would contribute to a better market for lumber.

Sidney J. Williams, state building inspector of Wisconsin, made an address on the "Safe and Unsafe Uses of Wood in Building." He discussed the various questions which come up in his department of the state government regarding wood, which included the strength of materials needed to insure safety and the quality of the material used and as regards fire loss. He presented the prominent features of the state building code and explained how its provisions had been arrived at.

MR. SIMMONS ON "FACTORY CONSUMPTION."

Roger E. Simmons, of Wausau, Wis., assistant secretary of the Northern Hemlock & Hardwood Manufacturers' Association, spoke to the subject "Factory Consumption and Trade Promotion." Mr. Simmons discussed particularly the raw material requirement of important wood using concerns. He stated that the total volume of lumber going into factory consumption in the country is 25,000,000,000 feet out of the 40,000,000,000 feet of lumber produced. There are fifty-five classes of factories and one of these classes, which comprises factories making planing mill products and sash and doors, consumes more lumber than all of the other fifty-four classes of factories put together. He said that no consuming field offered a wider chance for expanding trade in lumber than general building and he urged the lumbermen to prepare for getting the most they could out of this trade. He spoke of what his association had done in enabling the producers of lumber to take advantage of their opportunities. He told of the necessity of taking advantage of the growing movement among farmers to organize for associated endeavor. He also referred to the promotion work in stimulating the building of school houses and homes for teachers in the country districts.

DIRECTOR WEISS ON "SUBSTITUTES FOR LUMBER."

Director Howard F. Weiss, of the Forest Products Laboratory at Madison, was called upon to speak in place of Rolf Thelen, also of the Forest Products Laboratory, who could not be present. The subject was "Competing Materials." Mr. Weiss described what had been done in the lumber industry in counteracting the encroachments of substitute materials and how lumber was steadily winning its way back to its old position of being the foremost material for use in building construction.

Among others who spoke were W. W. Brown, of the Hamilton Manufacturing Co., Two Rivers, Wis., whose subject was "Requirement of Wood Consuming Factories;" Arthur Peabody, state architect of Wisconsin and Frank Moody, of the Wisconsin State Conservation Commission; J. C. Knox, of Cadillac, Mich., secretary of the Michigan Hardwood Manufacturers' Association; George H. Chapman, chairman of the Bureau of Grades of the Northern Hemlock & Hardwood Manufacturers' Association.

Owing to the length of the program, the papers by Secretary O. T. Swan on "The Strength of Timber" and of W. H. McDonald on "Grading Rules for Commercial Soft Woods," were omitted.

SOUTHERN PINE TRADE BAROMETER.

Only subscribers to the Southern Pine Association will now receive the valuable weekly compilation of reports from the yellow pine mills that have been published in each issue of this paper. The statistics gathered by the association are of great interest to the general lumber public, but the subscribers to the association naturally feel that they are entitled to this information by reason of their defraying the expense of it and it being a part of their service, and from this viewpoint they are undoubtedly correct. However, it may be said in a general way that the number of unfilled orders for yellow pine last week showed a considerable increase; that the new orders received are largely in excess of the shipments and that the position of the southern pine industry is in good shape, barring the scarcity of freight cars and motive power, which seriously interferes with shipments.

SOME OF THE ENTERTAINMENT FEATURES.

The enterprising lumbermen of Merrill, Wis., as strong a group of lumbermen as can be found in any lumber manufacturing center in the country, took full advantage of the opportunity presented to them at this meeting for showing what they could do in the way of hospitality and they did it handsomely. The entertainment was provided by the four lumber institutions at Merrill, namely the Heineman Lumber Co., the A. H. Stange Co., the Kinzel Lumber Co., and the Union Land Co., the latter a correlative institution of the A. H. Stange Co. The visitors were met at the train by representatives of these concerns, taken by automobile to their respective hotels, either the Badger or the Lincoln. On Friday evening 140 lumbermen sat down to an elaborate banquet provided at the Hotel Badger. The dinner was of the finest character and right up to the standard for which the Badger chef is noted all over the north. A few addresses were made at the instance of George C. Robson, who presided as toastmaster, among them one by Mayor Smith, of Merrill, who bade the guests a cordial welcome. August J. Stange, head of the Union Land Co. and son of A. H. Stange, looked after the singing festivities and took charge of a number of vaudeville acts which were introduced as a diversion.

On Saturday evening the visitors were guests of the Merrill lumbermen at an elaborate entertainment at the Badger Opera House, which is a part of the Hotel Badger. This entertainment consisted of vaudeville acts and moving pictures and was decidedly interesting throughout.

THE TRIP ON SUNDAY.

Practically all of the members of the conference remained over and were taken on a special train to the Newwood logging camp of the Union Land Co., seventeen miles northwest of Merrill on the company's logging road. This is a fine camp and up-to-date in every respect. At the dinner which was given at this camp the guests were treated to a splendid talk by D. N. Barrett, of Detroit, Mich., secretary of the World's Salesmanship Congress. Mr. Barrett's address was a remarkable exposition of salesmanship effort and the points that he made will long remain in the minds of his auditors. Other addresses were made by Chairman George C. Robson, E. E. Heineman, Charles J. Kinzel, August J. Stange and others. The Sunday trip was a treat in every way and the splendid equipment of the Union Land Co. in its logging operations was admired by the several score lumbermen who participated.

INTERESTING MEETING OF DOUGLAS FIR CLUB.

San Francisco, Cal., Dec. 15.—The fortnightly meeting of the Douglas Fir Club was held during luncheon at the San Francisco Commercial Club December 5 with a good attendance of the local representatives of mills of Oregon and Washington, for which San Francisco is the greatest marketing center for domestic California, Nevada and Arizona business, which normally consume fully 25 percent of the production of Douglas fir, also is the center for export trade which ordinarily consumes about 10 percent of fir output, but which will show marked increase in normal times through the operation of the newly organized Douglas Fir Exploitation and Export Co., with abnormal increase for some time after declaration of peace in Europe.

General discussion as to current conditions of the lumber trade indicated that the shortage of transportation, both cargo and rail, was a difficulty that would not be remedied for some time and that all the advantage went to the seller who could guarantee delivery. Demand for clears showed stronger in finish, flooring strips and worked flooring with advices that the mills had advanced their rail prices to the east, while adopting open cars to suit need for closed, by building a car structure out of common boards to protect the load, putting on the essential running board and ladders in order to pass muster. Business in San Francisco was reported sluggish at low prices, the east bay district was doing a good deal of business but at small margin of profit, but interior California valley reports indicated good volume and price.

Chairman Chas. R. McCormick announced that at a meeting of the directors of the club, Robert Dollar, of the shipping and lumbering company bearing his name, had been elected as president of the Douglas Fir Club, which office Mr. Dollar accepted in a speech expressing his confidence in the value of co-operation, and the especial need for a stronger get-together spirit among lumbermen.

MODEL BUILDINGS FOR RETAILERS.

The enterprise of the National Lumber Manufacturers' Association, in assisting retail lumber dealers to place working models of ideal farm buildings in their yards to assist in giving service ideas to consumers, has taken like wildfire, and many orders are being placed for such models by retailers all over the country. Investigation develops that the idea of advertising along modern lines, with something to show customers, is spreading rapidly in the industry, and the plan for city lumber exchanges to maintain exhibits for all prospective builders is being taken up in many places also.

Lumber retailers at Indianapolis are anxious to organize a lumber exchange such as those already made successful the past year at Kansas City, Minneapolis and Dayton. The Dayton exchange, the latest of these, has already worked wonders in

Digitized by Google

the development of the lumber business in that territory.

Plans are now being considered for the organization of traveling exhibits, in which the retailers of various cities might be induced to combine for a month to establish exhibits in some central location, for the benefit of all dealers in that territory.

SHINGLE ADVERTISERS WILL CONTINUE.

The manufacturers of red cedar shingles in the Puget Sound country who, in 1916, spent $60,000 in advertising the merits of their product, are so well satisfied with the results accomplished that they are intending to raise fully as large a fund for advertising in 1917. Practically all of those who participated in the advertising this year have signified their desire of joining in the movement next time. Secretary H. P. Wyckoff, of the shingle branch of the West Coast Lumbermen's Association, is now visiting the various shingle manufacturing centers and getting signatures to the advertising agreement.

Mr. Wyckoff states that there will be some changes in the character of the work next year, one of the principal changes being that more attention will be paid to combating the various fire ordinances in cities over the country that have been directed against shingle roofs. Another change that will be made is that the "Rite Grade" trade-mark will hereafter be used as an inspection mark instead of a brand. This will have the effect of eliminating the "Rite Grade" brand as the competitor of the many established brands of shingles and at the same time will accomplish the purpose of the association, which has been to guarantee to the consumer the quality of the shingles and to standardize the grades.

WEST COAST CUT AND SHIPMENTS.

The last report of the West Coast Lumbermen's Association from 128 mills for the week ended December 9 shows that shipments were materially increased, being 1,788 in the week ended December 9 as compared with 1,433 cars for the week ended December 2. Orders were also much heavier for the week of December 9 than in the previous week, so that the balance of unshipped orders showed an increase of considerable proportions. The figures for the rail trade follow:

	Cars
Orders unshipped Dec. 2	11,226
Orders accepted week ended Dec. 9	2,393
Total	13,619
Shipped out week ended Dec. 9	1,788
Orders on hand unshipped	11,831

For the cargo trade the report shows as follows:

	Domestic—Feet.	Export—Feet.
Unshipped ord. wk. Dec. 2	58,139,062	55,569,937
Orders accepted wk. Dec. 9	6,457,658	6,485,553
Totals	64,596,720	62,055,490
Shipments week end. Dec. 9	3,128,173	5,608,558
Balance unshipped orders	61,468,547	56,446,932

The above figures show that there was an actual production from the 128 mills during the week ended December 9, of 72,852,033 feet, which was 14,204,967 feet below the normal production. The orders received during the week were in excess of the actual production by 7,188,183 feet, but shipments were below the production by 14,291,134 feet.

ANNUAL ELECTION OF LUMBERMEN'S CLUB OF MEMPHIS.

Memphis, Tenn., Dec. 22.—Ralph May, of May Bros., will preside over the Lumbermen's Club of Memphis during the coming year. In the annual election of officers in the Business Men's Club Chamber of Commerce Saturday evening, Dec. 16, Mr. May defeated Joe Thompson, his opponent, of the Dudley Lumber Co. Other officers elected at the same time were:

First vice-president, Robert C. Stimson, of the Stimson Veneer & Lumber Co.; second vice-president, Geo. F. Riel of the George F. Riel Lumber Co.; secretary-treasurer, re-elected, D. F. Heuer, of A. N. Thompson & Co.; directors: H. J. M. Jorgensen, George McSweyn and U. S. Lambert.

Owing to the sudden death of D. D. Nellis, a prominent member of the club, which occurred Saturday morning, and owing to the tragic death by poisoning of Glenn May, a nephew of Ralph and a son of Frank May, of May Bros., quite a pall was cast over the election and before the results were announced resolutions expressing the love and sympathy of the members of the Lumbermen's Club were adopted and copies were ordered forwarded to the members of the families of the deceased. These resolutions were presented by J. D. Allen, jr., chairman of the committee on resolutions.

Owing to the death of Glenn May, Ralph May, the president-elect, was unable to be present. However, John M. Pritchard, chairman of his nominating committee, responded briefly for him. He said that he very greatly appreciated the honor which had been done Mr. May and that he felt sure the latter would give a good account of himself as soon as circumstances would permit him to thank the members of the club in person.

Although Mr. Thompson was defeated by Mr. May, he made one of the most delightful talks of the evening. He has a fine sense of humor and knows how to tell a story well, with the result that he enlivened the proceedings very materially. He announced when he was nominated that he was going to make his race on a platform in which dignity was to be the principal plank, but he is evidently cured along this line as he told the members of the club after the results were announced that he would never, if he lived a hundred years, run on his dignity again.

Geo. F. Riel, who was elected first vice-president, was unable to be present and Chas. G. Kadel, his former partner, thanked the members for the vote given him. Robert C. Stimson said that he appreciated the honor conferred on him and that he would put forth his best efforts on behalf of the Lumbermen's Club of Memphis. H. J. M. Jorgensen, Geo. McSweyn, and U. S. Lambert, the three new directors, all spoke briefly. They made it quite clear that they were fully appreciative of the honor conferred and also of the responsibility entailed by their election and that they would do their best to justify the confidence of the membership.

All of the defeated candidates spoke briefly and each made it clear that although they were beaten, they stood ready to serve the Lumbermen's Club of Memphis in every capacity possible.

C. B. Allen, who was beaten for the second vice-presidency, paid the Lumbermen's Club of Memphis a glowing tribute, saying that it was one of the best and most enthusiastic in America.

The newly elected officers will be installed at the first meeting after Jan. 1. At the same time the present officers will submit their annual reports, with such recommendations as they may deem appropriate.

EVANSVILLE CLUB ELECTS OFFICERS.

Evansville, Ind., Dec. 21.—At the regular monthly meeting of the Evansville Lumbermen's Club, on the second Tuesday of December, the 12th, George O. Worland, secretary and treasurer of the Evansville Veneer Co., was elected president of the club for the ensuing year. Charles A. Wolflin, of the Wolflin-Luhring Lumber Co., was elected vice-president, and Mertice E. Taylor, of Maley & Wertz, was re-elected secretary.

Mr. Worland is known as "The daddy of the Evansville Lumbermen's Club," by reason of the fact that it was largely due to his efforts several years ago that the club was organized. He was the first secretary of the club, and served in this capacity for a number of years. Mr. Worland will appoint the members of his standing committees at the next meeting of the club, which will be on the second Tuesday night in January. Mr. Worland takes the place of Daniel A. Wertz, who held the presidency for three years. Mr. Taylor is now serving his second year as secretary of the club, and he has made a "corker."

MR. ISHERWOOD HEADS NEW SERVICE DEPARTMENT.

The National Lumber Manufacturers' Association has decided to open a new field of work in its Trade Extension department, with the installation of a retail sales development service, and has engaged H. R. Isherwood, of the Sawyer Lumber Co., Sawyer, Wis., as a special retail representative in this work. He will take up his new work on January 1, and his chief duty will be to give retail lumber dealers of the entire country service helps in the increasing of their business, hints as to advertising, both in their local papers and by specialty. The service given will be of two types; the first is given to the dealer to assist him in broadening his market, and the second is given to the consumer to aid the lumber industry in giving the customer the right wood for the special need, through the medium of the retail dealer. Mr. Isherwood will spend much of his time on the road, calling personally on the retailers to give them suggestions, and to learn their problems and difficulties, in the hope that the manufacturers can help them lift these burdens.

Mr. Isherwood, while in charge of the Sawyer Lumber Co., developed many original selling ideas. He is the originator of the service department idea for retailers now being copied all over the country in retail lumber yards, has been a steady and scientific advertiser in the papers in his home territory, has furnished plans and given architectural assistance for all builders, and made his company

H. R. ISHERWOOD.

a campaigner for service to the consumer and modern and better buildings throughout Door county, Wisconsin, is the result.

With his retirement from Wisconsin, there will be a reorganization of the Sawyer Lumber Co., the new Fuller-Goodman Co. taking over all the Sawyer company's yards, with F. A. Fuller, of Oshkosh, Wis., in charge as general manager, and headquarters at that city.

NEW YORK LUMBERMAN CELEBRATE ANNIVERSARY.

New York, Dec. 18.—About 250 lumbermen gathered at the Waldorf-Astoria, on the evening of December 11, to celebrate the thirtieth anniversary of the New York Lumber Trade Association, a rousing big dinner having been arranged for the occasion.

The ordinary stunts were overshadowed by the presentation of a beautiful diamond ring to Mr. Perrine, who has so faithfully and efficiently served as president for seven years. Mr. Perrine was more than astonished when Richard S. White, on behalf of the members, came to the speakers' table and presented the ring, prefacing the action with a brief speech, in which he tried to put into words what was in the hearts of all the company. Mr. Perrine, who was almost a newcomer to the work of the association when first elected as its president, has given generously of his time and energy to further its aims, and is one of the most popular men in the local trade. Earlier in the day there was sent to Mrs. Perrine a beautiful rug, the gift of Mr. Perrine's association friends.

The Latest News of the Lumber World

LUMBER PRICES NOT HIGH.

Kansas City, Mo., Dec. 15.—M. B. Nelson, general sales manager of the Long-Bell Lumber Co., of this city, has recently issued a circular to his salesmen over the country regarding the frequent statements that are made by people who are not posted as to the high price of lumber. Lumbermen themselves know that the price of lumber is not high, but that the price of almost everything else is, especially articles having any near or remote relation to the war, which have advanced phenomenally. Doubtless many people take it for granted that lumber has gone up also and that this is erroneous is known to all lumbermen. However, Mr. Nelson has taken the trouble to prove it.

His letter to the salesmen says: "I have heard quite a little comment about the price of lumber being too high, so for the purpose of comparison have prepared a statement using the market report of Bradstreets on most of the staple commodities, as indicated in their quarterly reports for October in the years 1900, 1906, 1910, 1913 and 1916. The prices used for lumber are the average prices received on shipments made by our mills for the same periods."

Mr. Nelson goes on to say that in preparing these figures he has endeavored to show the quantity of the different commodities that 1,000 feet of lumber would buy at any of the given periods. He shows that lumber will buy less at this time than at any time in the last sixteen years, measured by its purchasing power. He also shows the price of lumber to be lower than was reached in either 1907 or 1913. He shows that the purchasing power of lumber is less than it has been at any time in the past, to say nothing of the increase in the cost of production, which, up to date this year, has been $1.65 a thousand feet over what it was a year ago.

New Orleans, La., December 21.—The sawmill of the Keith Lumber Co. near Beaumont, Tex., burned Wednesday night; loss, $100,000.

Mr. Nelson says it is shown that any buyer or consumer who is complaining about the high price of lumber is misinformed. His argument is as well illustrated by the price of flour as by any other item, that being a staple in which everybody is interested. He shows that in 1900, when flour was selling at $3.50 a barrel, yellow pine was selling at $11.25 a thousand feet at the mill, so 1,000 feet of yellow pine would therefore buy 3.21 barrels of flour. In 1906, with flour at $3.50 a barrel and yellow pine lumber at $17.92 a thousand feet, the lumber would buy 5.12 barrels of flour. In 1910, with flour selling at $4.40 a barrel and with yellow pine at $13.21 a thousand, 1,000 feet of yellow pine would buy 3 barrels of flour. In 1913 with flour at $4.25 a barrel and yellow pine at $15.60 a thousand feet, the lumber would buy 3.67 barrels of flour; but in 1916, with flour at $7.15 a barrel and yellow pine selling at $16.39 a thousand, it will buy only 2.28 barrels of flour.

Mr. Nelson's figures cover breadstuffs, live stock, groceries and provisions, fresh and dried fruits, raw and manufactured textiles, metals, mineral and vegetable oils, building materials, hay and cotton-seed, and the result is the same in almost every instance. One of the interesting illustrations is live stock, say best native steers on a basis of Chicago delivery at so much per 100 pounds. The tabulation is given as follows:

Beeves, Best Native Steers (Chicago), Per 100 Lbs.

Years	Commodity	Y. P. Lumber Per M. Feet	Will Buy Cwt.
1900	$ 5.50	$11.25	2.04
1906	6.80	17.92	2.64
1910	7.85	13.21	1.68
1913	9.50	15.60	1.64
1916	11.25	16.39	1.45

Hogs, Prime (Chicago), Per 100 Lbs.

Years	Commodity	Y. P. Lumber Per M. Feet	Will Buy Cwt.
1900	$ 5.30	$11.25	2.12
1906	6.75	17.92	2.65
1910	9.00	13.21	1.47
1913	8.95	15.60	1.74
1916	10.25	16.39	1.6

Annual Report of the Bureau of Foreign and Domestic Commerce Shows Wonderful Advance in Trade of United States

The development of American foreign trade during the second year of the war is the principal theme of the annual report by Dr. Edward Ewing Pratt, Chief of the Bureau of Foreign and Domestic Commerce, Department of Commerce.

Particular attention is called to the changes in the character of our foreign trade during the last fiscal year. "Contrary to the general impression," says Dr. Pratt, "the United States played a significant role in international trade previous to the war, but it should be observed that raw materials, foodstuffs, and unfinished products formed together by far the most important part of our exports, and that manufactured goods formed a very considerable part of our imports.

"The situation during the last fiscal year, however, has shown a genuinely striking change. Our foreign trade (and especially our exports) has increased at a tremendous rate. During the last fiscal year the United States has had a foreign trade greater than that of any other country during any year. Another notable fact is that there has been a marked shifting in the character of our foreign trade. Most important of all, perhaps, is the great increase in our exportations of manufactured goods and the decrease in our imports of such goods."

Five tables of statistics are presented to show exactly the nature of the changes that have taken place, and for this purpose are probably the most comprehensive figures that have so far appeared in print.

"Large as have been the increases in our foreign trade, and particularly in our exports," continues the report, "the significance of these increases is not always appreciated by the general public. What an increased foreign trade means to the manufacturer, to the farmer, to the railroad, to the merchant, and to shipping is often underestimated or entirely unappreciated." The importance of foreign trade is illustrated by the effect of changed trade conditions during the early months of the war in the wheat-growing and cotton-growing states. The increased demand in Europe for American wheat ushered in a remarkable period of prosperity in such states as Minnesota and the Dakotas, while the decreased demand for cotton had just the opposite effect in the southern states, where cotton is the staple crop. These two experiences, so different in character, have opened the eyes of those who did not appreciate the value of foreign markets.

"To the manufacturer, however," says the report, "foreign trade means something more than an increased demand for his products. There are very few factories producing at anything like full capacity. The average factory is probably producing at not more than 75 percent capacity. If the manufacturer could find a steady and reliable outlet for this additional 25 percent capacity, he would be able not only to increase his profits greatly, but to reduce considerably his overhead.

"Emphasis should also be laid on the fact that foreign trade considerably increases the general stability of business conditions in a country. A widely distributed foreign trade means greater average stability. In most countries of the world prosperity or depression (in fact, business conditions in general) depend to a considerable extent upon agriculture and the state of the market for agricultural products. We have recently observed how one part of the United States suffered a severe depression and another section enjoyed great prosperity because of changed market conditions. The same is true of practically every line of manufacturing. To take a simple example: Suppose that a manufacturer of agricultural machinery marketed his goods only in the United States. If there were a single bad year, when crops were not good and market conditions were not favorable, he would probably find his outlet for agricultural machinery considerably curtailed. If, on the other hand, that manufacturer sold his machinery not only in the United States, but in Canada, in South America, in South Africa, in Australia, in India, and in Russia, it would be quite unlikely that there would be bad harvests, bad crops, or bad market conditions in every country of the world, and perhaps while the United States was experiencing a depression Argentina or Russia would be enjoying prosperity, and the machinery that could not be sold in the United States would be marketed in other countries. The greater the number of markets that the manufacturer is supplying the steadier is the demand for his products likely to be."

The report urges strongly the necessity of building up at this time as much trade as possible outside of the war zone. The business of supplying munitions is a temporary one, whereas business outside of the war zone can be made permanent to a large extent, if proper precautions are taken. The importance of munitions and secondary war supplies in our recent export trade is discussed at length in the report and a number of interesting tables are presented to prove the point that the volume of this temporary business has been greatly exaggerated. The ability of the belligerent countries to return to normal pursuits and take up their trades where they left off is also considered, as well as our own ability to meet whatever competition may come into being after peace is made. The preparations for peace already made in this country and the preparations that remain to be made are outlined, special emphasis being placed on the importance of the Federal Reserve Act and of the newly authorized Tariff Commission.

Regarding the work of his own bureau, Dr. Pratt says: "The Bureau of Foreign and Domestic Commerce has as its primary function the promotion of foreign trade. I desire very much indeed to see more attention given to domestic commerce, and I propose to urge congress this year to make such appropriations as will enable this bureau to do effective work in developing our domestic trade and rendering it more efficient and economical.

"During the past year it has been the constant aim and ambition of the 'Bureau of Foreign and Domestic Commerce to make its service more practical. We have tried to get away from the doctrinaire and the theoretical and have endeavored to make each project and each act definite, concrete, and of practical assistance to the business community."

The bulk of the report, which contains no less than 102 pages, is concerned with the work of the bureau during the fiscal year ended June 30, 1916, and with outlines of the work to be carried out during the fiscal year 1917. EDITOR.

November Building Statistics of Large Proportions

A year ago activity in building throughout the country had increased through 1915 until the high figures were reached in November and it is with this abnormal situation last year that comparison is made in the November operations. Bradstreet's reports from 152 cities in November show a total value of permits issued of $70,678,968, as compared with $68,381,041 in November, 1915, an increase of 3.3 percent. The *American Contractor's* reports from only 109 cities gives the total value of building permits issued in November at $69,268,617, as compared with the total value for November, 1915, from the same cities of $68,465,791, an increase of about 1 percent over a year ago and this, considering the advance in prices of commodities and the rather disturbed condition of commercial affairs, is a remarkably good showing. Permits issued in November at Chicago showed a slight falling off, as was to be expected in the declining year. Had there been no heavy slump in New York, such as occurred, the showing throughout the country would have been most gratifyingly large. Building operations in New York in November were a million dollars less than Chicago, which, as usual, led the country.

According to Bradstreet's the best showing made in any locality of the country in November was in the western states, where twenty-one cities showed an increase in the value of permits of 34.6 percent. In the southwest fourteen cities showed an increase of 31.6 percent and in the south twenty-five cities showed an increase of 30.1 percent and in twenty-one far western cities there was an increase of 23 percent. The statement as compiled by the *American Contractor* from 109 cities follows:

Cities.	November, 1916 No. of Buildings.	November, 1916 Estimated cost.	November, 1915 No. of buildings.	November, 1915 Estimated cost.	Per Cent. Gain.	Per Cent. Loss.

DECEMBER BUYING OF EQUIPMENT.

Because the buying of freight cars and other railroad equipment has fallen off to some extent this month it should not be taken as a discouraging feature, for the fact is that there is no particular incentive on the part of a railroad to buy freight cars just now, because of the difficulty of securing steel. Much of the contracting for steel that is now being done will not be delivered before 1918. All of the car building plants are booked to full capacity for from six to eight months, working on orders given mostly during the last three months. Orders were given for 13,000 cars in September, 25,000 in October, 56,000 in November, and it is estimated 15,000 in December. Railroad men say that orders for about 25,000 cars are pending.

Among the recent orders placed were 1,000 wooden box cars for the Minneapolis & St. Louis railroad, given to the American Car & Foundry Co.; 100 gondolas for the Pittsburgh & Shawmut railroad, also to the American Car & Foundry Co.; 2,500 refrigerator cars for the Union Pacific railroad and numerous smaller orders. Among the orders that will be given but were not placed at latest advice, were 500 furniture cars for the Illinois Central; 1,000 box cars and 500 automobile cars for the Northern Pacific; 500 gondolas for the Minneapolis & St. Louis; 500 stock cars for the Great Northern; 200 coal cars for the Nashville, Chattanooga & St. Louis; 1,000 gondola cars for the New York Central Lines; from 100 to 500 wooden box cars and from 50 to 100 tank cars for the St. Louis, Brownsville & Mexico railroad; 2,000 gondola cars and 1,000 hopper cars for the Norfolk & Western; 50 flat cars for the Escanaba & Lake Superior; 1,000 general service cars for the Los Angeles & Salt Lake railroad and 750 gondolas and 500 hopper cars for the Nickel Plate.

A peculiar feature has developed in connection with the cost of cars, due mostly, it may be said, to the increased price of steel and not to the slightly higher cost of lumber. In 1915 the Rock Island road bought 4,000 box cars at $855.60 a car. Last week the same road got bids on 2,000 cars of the same type, which it expected to contract for at about $1,600 a car, or $3,200,000 for the lot. The bid was about $3,700,000, or $1,850 a car, and as the appropriation was exceeded by $500,000, the order was not given.

CUT OVER YELLOW PINE LANDS.

The Southern Pine Association is engaged in a campaign for the sale and development of the cut over pine lands of the south, many thousands of acres of which are owned by the subscribers to the association. It is intended to co-operate with the New Orleans Chamber of Commerce and the Southern Settlement & Development Organization of Baltimore. It is felt that the development of the cut over timber lands of the south would not only add enormously to the agricultural products of the country, but would contribute toward the lowering of the cost of living, especially after the conclusion of the European war. It is believed that a comprehensive campaign of promotion would have the effect of educating home-seekers as to the possibilities of the south and bring a flood of farm migration in that direction. Among the prominent yellow pine representatives who are members of the committee are L. D. Gilbert, of Texarkana, Tex.; J. S. Foley, of Kentwood, La.; F. W. Reimers, of Hammond, La.; J. M. Thompson, of New Orleans; Walter Parker, of New Orleans; R. S. Kellogg, secretary of the National Lumber Manufacturers' Association; J. E. Rhodes, secretary-manager of the Southern Pine Association; A. G. T. Moore, assistant secretary, New Orleans, and W. J. Ferry, advertising manager.

CEDAR BOAT STOCK ADVANCES.

New York, Dec. 18.—A general advance of $5 in the price of cedar boat lumber has been announced by the manufacturers of that class of stock, who report an unusually heavy demand for that and other boat lumber. Activity in those lines using this stock has gone far beyond expectations, and there is every promise that it will continue at the maximum. The extra demand and higher operating costs account for the advance, and manufacturers urge buyers to get in their supplies for the winter on the new base.

A FINE CHRISTMAS GIFT.

Employes of the Cummer-Diggins Co., Cadillac, Mich., were made happy this week by a Christmas gift of $50 to each employe who had been in the service of the company for six months or longer. The company has many hundreds of employes here and in the woods and the gift amounts to a considerable total.

STANDARD WOOD BLOCK PAVING SPECIFICATIONS.

The most difficult problem in the wood block paving industry has been solved with the compilation and probable adoption by six national technical associations of a uniform set of specifications for the laying of such payment, including specifications as to timber, preservative, treatment and methods of construction of the blocks.

One of the important steps was the adoption of standards for two preservative oils. Previously there have been various special specifications drawn, often in behalf of individual manufacturers and forced into the specifications for blocks, but under standard specifications two types of oil are scheduled, a coal tar and creosote oil and a coal tar distillate oil.

These standard specifications were prepared by a group of committees representing the best available authorities in the six national associations. These committees drew up uniform specifications, for which all of the separate societies had been working individually, and at the coming meetings of the associations involved, the standard specifications will be unquestionably adopted, with slight changes. The committees which framed the specifications were composed of the best authorities on the subject, and the adoption of a uniform standard will mean a great gain to the wood block paving industry.

ORGANIZATION OF TURPENTINE AND ROSIN PRODUCERS.

New Orleans, La., Dec. 20.—(SPECIAL TELEGRAM)—A meeting of the Turpentine and Rosin Producers Association was held at the St. Charles Hotel here today for the purpose of arranging the final details for organization. The purpose of the new association will be the broad development of the naval stores industry. Its various fields of operation will be divided first into service bureaus these bureaus being organized along lines similar to those of the Southern Pine Association.

The attendance of the meeting was not large, but those who were there represented fully 75 percent of the turpentine production of the three states of Louisiana, Mississippi and Texas. H. H. Gordon, of Lake Charles, La., presided at the meeting.

The committee appointed to make arrangements for the drawing up of the charter of incorporation is as follows: J. F. Taylor, chairman; L. N. Dantzler, L. H. Guerre and D. J. Gay. This committee will probably convene at New Orleans during the first week in January.

That the new organization will be a success is demonstrated by the fact that already operators representing over 50 percent of the production of turpentine in the three states named have pledged themselves to subscribe to the purposes of the organization.

Those present at the meeting were: H. H. Gordon, Lake Charles, La., acting chairman; L. N. Dantzler, Biloxi, Miss.; D. J. Gay, Biloxi, Miss.; J. F. Taylor, New Orleans; W. A. Hood, Pinebur, Miss.; E. M. Pringle, Glenmora, La.; W. G. Phillips, Provencal, La.; H. B. Corbett, Fullerton, La.; J. Foley, Kentwood, La.; H. H. Cust, Arbo, Miss.; R. M. Newton, J. B. Newton, Poplarville, Miss.; R. Dunwoody, New Orleans; D. D. Peabody, New Orleans; A. B. Marston, New Orleans; W. H. Favourite, New Orleans; L. H. Guerre, Bogalusa, La.; S. F. Speh, Washington, D. C., acting secretary.

RECEIVERSHIP REFUSED BY COURT.

Philadelphia, Pa., Dec. 21.—William Whitmer & Sons, Inc., of this city, make the following statement regarding recent litigation in which the concern has been engaged:

In the suit of Robert F. Whitmer vs. William Whitmer & Sons, Inc., being an application for a receiver on the ground of insolvency, the chancellor of the state of Delaware made an order on the 16th inst., discharging the rule to show cause why a receiver *pendente lite* should not be appointed. The rule was heard by the chancellor on affidavits filed on behalf of both parties. Seven persons filed affidavits supporting the contention of insolvency; one of the seven was the complainant himself and the other six were persons who had formerly been connected with the company. On the other hand fifty-eight affidavits were filed on behalf of the defendant company, showing an excess of assets over liabilities amounting to upwards of $4,000,000. Most of these affidavits were by persons wholly without interest in the litigation and who were thoroughly familiar with the facts about which they testified.

OBITUARY

DEATH OF WILLIAM LEROY ROACH.

The death of William Leroy Roach, president of the Roach & Musser Co., of Muscatine, Iowa, operating an extensive sash and door factory and largely interested in lumber and timber enterprises over the country, occurred at the Blackstone Hotel in Chicago, where Mr. Roach had been stopping for some time, on Monday, December 18, from pneumonia. Mr. Roach arrived in Chicago on Monday, December 1, and had suffered from a slight cold before leaving his home in Muscatine. His cold did not respond readily to treatment after his arrival here and on Thursday pneumonia developed. Members of his family were sent for and all but one son, Edward, First Lieutenant of Battery C

THE LATE W. L. ROACH.

of the First Iowa Field Artillery, stationed on the Mexican border, were present at his bedside when he passed away.

Mr. Roach was born in Muscatine, where he spent the greater part of his life, on October 10, 1862. At the age of 18 years, upon finishing his studies at the Muscatine public schools, he secured a position in a boot and shoe store, where he remained two years. He then went with the Muscatine Coal Co. at What Cheer, Iowa, and in 1883 removed to Kansas City, where he accepted a position with th Huttig Sash & Door Co. In 1885 he started in business for himself in manufacturing sash and doors at Kansas City, as the Roach & Wilker Manufacturing Co., which later was succeeded by the Western Sash & Door Co. At that time he also had interests in the Huttig Sash & Door Co., St. Louis, and was its vice-president, but disposed of his interests and in June, 1888, organized the Roach & Riner Manufacturing Co. of Kansas City. He returned to Muscatine in 1889, where he assumed the management of the Muscatine Sash & Door Co. The business of this concern developed largely under Mr. Roach's direction and in 1903 the name was changed to the Roach & Musser Sash & Door Co., and then to the Roach & Musser Co.

In 1901 Mr. Roach began to branch out into other fields and with several associates formed the Coast Cypress Railway Co., a corporation organized for the purpose of taking over and developing timber lands in Florida. He was also prominent in the organization and conduct of the Standard Lumber Co. of Live Oak, Fla., the German-American Timber Co., the Chipola Lumber Co., the Live Oak, Perry & Gulf Railway Co., and the Carpenter-O'Brien Co., the latter of Jacksonville. He engaged in a good many enterprises, also in the Spokane and Pacific coast territories, being president of the Roach Timber Co. and of the Cameron Lumber Co., and also of the William Musser Lumber & Manufacturing Co.

The deceased was one of the leading citizens of his native city, serving in various capacities in a civic way and taking a deep interest in everything looking toward the promotion of Muscatine's material welfare. Lately he had spent considerable time in Chicago because of his widely extended interests and while here made his headquarters at the Blackstone. His death is a distinct loss to Muscatine, as he had expressed to intimate friends his intention of devoting himself more closely in the future to the advancement of the inlustrial life of his town.

Mr. Roach was twice married, his first wife passing away in 1909. Two years ago he was united in marriage with Mrs. Anna Kempton, who survives him, together with three children of his first wife, John Roach, of Muscatine; Lieutenant Edward Roach and Robert Roach, who has lately been associated with his father's interests at Live Oak, Fla. The deceased is also survived by his venerable mother, Mrs. Sarah Roach, of Muscatine, and by his four sisters, Mrs. Eliazbeth Schafnit, of Muscatine; Mrs. R. E. King, of Kansas City, and Misses Lillian and Grace Roach, of Muscatine.

C. E. GILL.

While in Chicago last week Monday, Charles Gill, of the Gill-Andrews Lumber Co., Wausau, Wis., telephoned to the LUMBER WORLD REVIEW the sad news of the death at Wausau of his father, C. E Gill, who passed away suddenly at 8:30 o'clock Sunday evening. The deceased lumberman had been engaged in the hardwood trade of northern Wisconsin for many years, but in the last few years had been practically retired. He came to Wausau from Minneapolis and started in the wholesale lumber business there in 1896. For several years he was the representative of the Chicago firm of Upham & Agler among the northern mills, a position in which he was succeeded by his son, Charles, who recently formed the Gill-Andrews Lumber Co. Mr. Gill was sixty-four years of age. He is survived by his widow and daughter, Miss Irma Gill, and the two sons, Charles and B. S. Gill, of Philadelphia.

HOO-HOO MEETING AT SAN FRANCISCO.

San Francisco, Cal., Dec. 15.—Guy A. Buell, the new Vicegerent Snark of Hoo-Hoo for the central district of California, held one of the most interesting and enjoyable concatenations that has ever been held in the Golden State, at the San Francisco Commercial Club, on December 9. There was an assemblage of sixty-one members of the fraternity who were present at the dinner at 6:30 o'clock. During and after the dinner entertainment was provided by a professional orchestra, consisting of piano, banjo and saxophone. Other talent provided during the evening was enlisted by Vicegerent Snark Buell from the ranks of Hoo-Hoo, there being vocal solos by Vere Hunter, of Oakland, and C. S. Brace, of Calistoga, which were rendered with exceeding credit. Mr. Hunter's partner, Hugh W. Hogan, played the flute admirably. Rodman Hendrickson and his brother, Milton, did an original German dialect stunt, which was exceedingly laughable and fully as good as many professionals could do. Among those who were called upon for remarks at the banquet were F. W. Trower, ex-Snark of the Universe; George M. Cornwall, of Portland; C. G. Bird, of Stockton; R. A. Hiscox, ex-Supreme Bojum; R. A. McArthur, Supreme Gurdon; M. H. Lauden, Little River Redwood Co.; S. E. Slade, S. E. Slade Lumber Co., and C. J. Reynolds, of the California Sugar & White Pine Co. The concatenation followed the banquet and was conducted by the following officers:

G. A. Buell, Snark; J. R. Neylan, Senior Hoo-Hoo; A. B. Wastell, Junior Hoo-Hoo; R. A. Hiscox, Bojum; R. P. Buell, Scrivenoter; Jere Casey, Jabberwock; Chas. Rose, Custocatian; James Smilie, Arcanoper; Thos. Parks, Gurdon.

The kittens initiated were:

Robert Henry Lee, Buehner Lumber Co., San Francisco.

C. E. Reinhardt, Reinhardt Lumber & Mill Co., San Francisco.

J. E. Higgins, jr., J. E. Higgins Lumber Co., San Francisco.

R. S. Slade, S. E. Slade Lumber Co., San Francisco.

J. E. Stott, Eby Machinery Co., San Francisco.

J. (Drum) Fifer, Navarro Lumber Co., San Francisco.

F. E. Bailey, E. K. Wood Lumber Co., Oakland.

Telegrams of greeting were read from Julius Seidel, of St. Louis, Mo., Snark of the Universe, and from E. D. Tennant, of St. Louis, secretary-treasurer.

Personal News Notes

C. C. Hubbard, of George D. Griffith & Co., this city, has recently been on a buying trip at mills in the southeast. He reports a general car shortage throughout that territory.

Joseph A. Gabel, manager of the Pacific Mutual Door Co., Tacoma, Wash., spent a few days in Chicago last week after a month's trip at eastern points. He was intending to leave for the west coast on Sunday evening.

Walter P. Cooke, president of the Great Southern Lumber Co., of Bogalusa, La., and also president of the New Orleans Great Northern Railroad Co., has announced the appointment of an industrial commissioner of the railroad in the person of Walter Scott Ayers, who will have headquarters in Chicago at 864 McCormick building.

Peter T. Langan, of Cairo, Ill., president of the Illinois Lumber & Builders' Supply Dealers' Association, was in Chicago last week in attendance upon the meeting of the association directory, which was held here at the headquarters in the Manhattan building. Mr. Langan was accompanied by his estimable wife and the LUMBER WORLD REVIEW is indebted to them for a cordial visit.

A. Fletcher Marsh, chairman of the traffic committee of the Lumbermen's Association of Chicago, and Percival S. Fletcher, of the D. S. Pate Lumber Co., this city, an active member of the committee, were in Washington, D. C., last week in attendance on the hearing before the Interstate Commerce Commission relative to the transit car privilege, which the association they represent recently petitioned the Interstate Commerce Commission to retain.

O. O. Axley, sales manager of the Southern Lumber Co., Warren, Ark., was in Chicago last week Tuesday on a brief business visit and called at the LUMBER WORLD REVIEW office. Mr. Axley had been in the north for some days looking over conditions from a yellow pine standpoint. Relative to the car supply Mr. Axley said that his company is receiving large shipments of machinery and other equipment for its new mill just now and loads out the empties with lumber, which greatly relieves what would be otherwise a strenuous situation.

Grant Stephenson, of Milwaukee, son of Hon. Isaac Stephenson, of Marinette, Wis., and who has long been known to have a leaning toward naval service, has joined the United States Naval Reserve and will hold the rank of lieutenant, senior grade. Mr. Stephenson has been engaged for many years in the lumber and timber business and for some time was in charge of the chemical plant at Wells, Mich., which was one of the properties controlled by his father and associates. It is stated that he will begin active duty January 1 on one of the government battleships.

Alex Lendrum, a former Chicago hardwood lumberman of prominence, but who has for many years been associated with the Penrod Walnut Corporation and allied interests at Kansas City, Mo., and in Arkansas, was in Chicago last week on a brief visit. Mr. Lendrum has disposed of some of his interests in lumber and is now devoting himself to rice growing. He is now a resident of Helena, Ark., and is president of the Little Prairie Rice Co. of Moro, Ark., which is a largely capitalized corporation and operates a big rice plantation. Mr. Lendrum was heartily greeted by a number of his old lumbermen friends while visiting in Chicago.

THOMAS E. POWE ELECTED PRESIDENT.

St. Louis, Mo., Dec. 21.—The new board of directors of the Lumbermen's Exchange of St. Louis, at a meeting held Tuesday afternoon, December 19, elected Thomas E. Powe, president of the Thomas E. Powe Lumber Co., as president for the ensuing year. Others elected were, Julius Seidel, Julius Seidel Lumber Company, vice president; R. E. McKee, of the Long-Bell Lumber Co., treasurer, and O. A. Pier, the present incumbent, secretary.

The new board of directors follows: Thomas E. Powe, Julius Seidel, A. J. Gorg, and R. E. McKee.

The reports of the secretary showed that there was an awakening of interest on the part of the lumber industry in the exchange. There are at the present time five divisions of the exchange.

An entertainment is being planned for some time during the month of January, when prominent speakers will address the members of the exchange. The new board of directors will hold a meeting during the next few days, at which the personnel of the various committees will be announced.

A MICHIGAN-NEW YORK ENTERPRISE.

That there should be as much, if not more, standing hardwood timber available for manufacturing in the states of New York, Pennsylvania, Maine and Virginia than there is in the northern Michigan and Wisconsin district would be considered an exaggerated statement by most lumbermen, yet that is the expression of belief made by H. S. Hull, president of the Oval Wood Dish Co., of Traverse City, Mich., and a lumberman of wide and substantial repute. Mr. Hull's company has manufactured hardwood lumber on a large scale for twenty-five years from timber in the Grand Traverse district, but this winter is cutting its last logs and by May 1. 1917, will close down its extensive mill at Traverse City, which will be dismantled and a large part of the machinery removed to Tupper Lake, Franklin county, New York, where it will be utilized in the equipment of a mammoth plant now in course of construction by the Oval Wood Dish Co. Had the company been able to secure adequate supplies of timber in the northern Michigan district, it would, no doubt, have continued in its prestige as the largest manufacturing enterprise and only lumber concern in Traverse City, but the timber remaining in that district is all in the hands of operating companies and the Oval Wood Dish Co. interests were compelled to look elsewhere for the kinds of timber, birch, maple and beech, that are best adapted to their purposes. They found it in Franklin county, New York, where they purchased from various parties 50,000 acres and will

W. CAREY HULL, OF TRAVERSE CITY, MICH.

be able to round up as much more in the same locality when it is needed. However, the tract already bought will afford the company ample resources for nearly a quarter of a century, even at the cutting rate of a modern, fully equipped plant such as is building.

The new sawmill at Tupper Lake will be of Allis-Chalmers construction and will comprise two bands, gang and resaw, and if it were to saw lumber exclusively it would have a daily capacity of from 100,000 to 125,000 feet of hardwoods in ten hours. The entire plant will be of reinforced concrete, combined with heavy mill type of construction. The mill will be two stories high, the main building being 306 by 67 feet, with a wing 67 by 106 feet, in ground dimension.

The second floor of the wing is of 2x6's laid edge up and on top of this is hardwood flooring, while the "wet" portion and all first floors are of concrete. The roof will be 2-inch boards, dressed and matched over which is laid fire proof roofing material. The power will be supplied by three batteries of two each water tube boilers with a total rating of 2,400 H. P. and two Allis direct connected turbo-generators, one of 1,000 K. W., and one of 750 K. W., the power house being 103 by 94 concrete and with fire proof roof with a Custodis stack 225 feet high, 12 feet 6 inches diameter at the top and a fuel storage house of capacity for seventy-two hours' shut down. This power plant will also supply 800 H. P. steam to the Tupper Lake Chemical Co., whose 80 cord alcohol plant is adjacent and will also light the village of Tupper Lake, about 4,000 population. The other buildings of this vast plant will be of similar construction to that of the sawmill. They comprise a clothes pin factory, two stories, 219 by 54; a box factory, 72 by 308; a recreation hall and lunch room, 81 by 100; a wire end dish factory. 219 by 116; a veneer and pie plate factory, 87 by 219; an oval dish room, 81 by 83; steam vats, 64 by 140. These buildings are all one story with fenestra sash and 30 foot courts and all lead into a covered 24 foot wide trucking space, 517 feet long leading to the warehouse, 500 feet distant, a building 243 by 400, one story, of mill type construction with outside walls of concrete plastered on "Hy Rib." Fast electric trucks, with trailers, will be used to transport the 200,000 pounds of daily manufactured products. There are also machine shop, blacksmith shop and carpenter shop, all of generous proportions. The total floor area of the plant is 300,000 square feet. Most of the buildings are already under roof, but because of the delay in securing steel trusses and other material the plant can hardly be ready to operate before August 1, 1917. John L. Graham, engineer, of Reynoldsville, Pa., who designed the plant and is in charge of its construction, is well known to lumber manufacturers, both north and south, as a designer and builder of sawmills and flooring plants and as a specialist on sawmill machinery.

The officers of the Oval Wood Dish Co. are: H. S. Hull, president; W. Carey Hull, vice president and general manager; J. M. Longnecker, secretary and treasurer; F. M. Longnecker, manager of sales, and Riley Seers, traveling sales agent. The new plant will be in charge of W. Carey Hull, who is widely known as the president of the Michigan Hardwood Manufacturers' Association. His removal to Tupper Lake, necessitated by this new enterprise, will be a distinct loss to Traverse City, where he is one of its most enterprising and greatly esteemed citizens, and to the Michigan hardwood fraternity, among whom he has been a conspicuous worker for years. His father, H. S. Hull, will remain in Traverse City and will close up the affairs of the company in that region during the coming year.

Thus ends the career of Traverse City as a lumber manufacturing point, the Oval Wood Dish Co. being the last one of the many concerns which have operated there since the Hannah-Lay interests began to manufacture lumber there in 1851.

NATIONAL HARDWOOD AFFAIRS.

The official bulletin of the National Hardwood Lumber Association for December makes the announcement that the regular semi-annual meeting of the board of managers has been called by President John M. Woods to meet at the association headquarters in Chicago on Friday, January 12.

It is also announced in the bulletin that about fifty members of the National Hardwood Lumber Association interested in the manufacture and sale of cypress lumber met at the Hotel Gayoso, Memphis, Tenn., on Friday, December 15, for the purpose of discussing cypress inspection rules. The conference resulted in passing resolutions recommending that the inspection rules committee of the association prepare an independent set of rules for the inspection of cypress, these rules to be adopted and copyrighted by the association and be applied by the inspection department instead of the rules of the Southern Cypress Manufacturers' Association, now in use by the National.

The bulletin also states that the volume of original inspections of hardwood lumber made by the inspection department in November was 18,123,862 feet, which is the largest amount inspected in any one month since October, 1912.

James L. Stewart has resigned as deputy national inspector at Buffalo, N. Y., and will be succeeded December 26 by Clyde Fravel, of 965 Elk Street, Buffalo.

The following applications for membership have been received since the last issue of the bulletin:

Davidson, Hicks & Greene Co., Nashville, Tenn.
I. B. Levy, New York, N. Y.
C. S. Powell Lumber Co., Inc., New York, N Y.
John Morrow Lumber Co., Harriman, Tenn.
Caddo Hardwood Lumber Co., Shreveport, La.
J. O. & O. Von Zellen Lumber Co., Skanee, Mich.
E. W. McClave & Son, Inc., New York, N. Y.
Hardwood Manufacturing Co., Ellisville, Miss.
Anson G. Betts & Co., Asheville, N. C.
Arkadelphia Milling Co., Arkadelphia, Ark.

MEASURES TO RELIEVE CAR SHORTAGE.

Washington, D. C., Dec. 18.—The American Railway Association through a special committee located here is going to try drastic measures to compel the railroads of the country to help out in the car shortage situation, according to an announcement just issued. The Commission on Car Service, the committee above referred to, has the following to say in its announcement:

"Railroads that refuse to co-operate with the American Railway Association in the efforts its Commission on Car Service is making to relieve the car shortage existing in some parts of the country are to be brought before the bar of public opinion.

"This, in effect, is what Fairfax Harrison, president of the Southern Railway and chairman of the Commission on Car Service, has advised Commissioner McChord of the Interstate Commerce Commission. He said that the American Railway Association proposed to use publicity when necessary to force some carriers to obey the instructions, issued by the Commission on Car Service to increase car efficiency, and framed primarily in the interest of the public as a whole.

"All members of the American Railway Association will receive the following notice sent out today by the Commission on Car Service:

" 'The Commission on Car Service is earnestly endeavoring to accomplish the purpose for which it is sitting in Washington in consultation with the Interstate Commerce Commission, which involves the redistribution of the equipment on a basis more nearly in accordance with ownership.

" 'It counts confidently upon the earnest co-operation of all officers of each individual railroad.

" 'The commission is gratified by the extent to which this co-operation is manifested on the part of the majority of railroads, but regrets that a number have not yet accorded it to the same extent. In justice to those who are co-operating, and in order to perform its duties equitably the Commission on Car Service proposes hereafter to make public the names of the roads which do not comply with its requests for information and for action in the matters committed to the Commission on Car Service by the members of the American Railway Association.'

"Some railroads have been delinquent in sending to the Commission on Car Service reports requested, while others have failed to follow instructions issued to all railroads in an effort to correct the car shortage.

"Instructions issued so far by the Commission on Car Service of the American Railway Association, in the main call for the return of open top cars to the railroads owning them; for a concerted effort to send box cars to those territories where there is an acute shortage, for the return of refrigerator cars to their owning lines, and for the use of drastic restrictions—commonly called embargoes—to prevent sending to the eastern seaboard, New England, Gulf ports, Detroit, and to other congested points, freight which cannot be disposed of immediately upon its arrival at destination."

THE NEWLAND'S COMMITTEE ASKS EXTENSION OF TIME.

Washington, D. C., Dec. 20.—It is understood that the Senate Committee on Interstate Commerce will soon hold hearings on the Webb bill. However, it is not believed, from what has been learned from the chairman of the committee, Senator Newlands, that this bill will be pushed until the railroad situation has been straightened out.

The Joint Congressional Railroad Investigating Committee, of which Mr. Newlands is also chairman, has asked congress to extend the time for completing its work from January 1, 1917 to January 1, 1918. The enormous volume of work before it makes it impossible to complete the inquiry before another year, the commission says.

An increase [illegible]priation from $24,000 to $40,000 has [illegible]. Senator Newlands has issued [illegible]laring that congress should sit in extra session if it does not otherwise have time to complete the president's railroad legislation program. He also called the term "compulsory arbitration bill" a misnomer.

"No measure for compulsory arbitration is proposed," he said. "The legislation desired is an amendment to the mediation and conciliation act, providing that when mediation and conciliation have failed there shall be an investigation of the facts by a government commission, appointed by the president, instructed to report within ninety days, accompanied by a stay of the power of strike or lockout during the period of investigation and for thirty days thereafter."

INTERESTING PROGRAM PREPARED FOR FORESTRY ANNUAL.

Washington, D. C., Dec. 18.—Following a conference with Charles Lathrop Pack, president of the American Forestry Association, P. S. Ridsdale, secretary, announced the list of those on the program for the international forestry conference to be held here on January 18 and 19.

On the program are: E. A. Sterling, of Chicago; Henry S. Graves, Chief Forester; Stephen Mather, superintendent of the National Parks; Capt. J. B. White, of Kansas City; E. W. Nelson, chief of the U. S. Department of Biology; W. P. Wharton, of Boston; E. T. Allen, of Portland, Ore.; Clyde Leavitt, Canadian Department of Forestry; S. B. Detwiler, of the U. S. Department of Agriculture; C. R. Pettis, superintendent of state forests of New York, and others.

Washington, D. C., Dec. 21.—(Special telegram.) The American Consul General at London in a warning to lumbermen in a cablegram received today by the State Department says that only boards for the manufacture of packing cases will be admitted into Great Britain. The import prohibition applies to wood manufactures in general including lumber cut to the same size but not intended for the manufacture of cases. British importers must prove that boards are intended for cases or the same will not be admitted. The cablegram intimates that American lumbermen are shipping timber into Great Britain under false pretenses.

ORAL EXAMINATION OF TRADE COMMISSIONERS SET FOR JANUARY 19.

Washington, D. C., Dec. 18.—It is understood that the oral examination for the Lumber Trade Commissioners to Europe will be held in this city on January 19. The examinations will follow the meeting of the committees of the lumber associations affiliated with the National Lumber Manufacturers' Association in Chicago. It is expected here that a number of the lumbermen attending the Chicago meeting will come to Washington to take part in the oral examination.

INTERSTATE COMMERCE COMMISSION DECISIONS.

Following are some of the interesting lumber decisions handed down recently by the commission:

In case No. 8275, of the Western Carolina Lumber & Timber Association et al., against the Southern Railway et al., the commission says:

"Charges collected on certain shipments of lumber in carloads from points in North Carolina and South Carolina to points in New York, New Jersey and Pennsylvania found to have been unlawful. Reparation awarded."

In the case of the Farmers Lumber Co., of Omaha, Neb., No. 8368, against the Chicago, Rock Island & Pacific et al., the commissioners say, in part:

"Minimum weight of 38,000 pounds applicable on straight and mixed carloads from Omaha, Neb., to points in Kansas on defendants' line found reasonable."

In case No. 8194, of the Wisconsin & Arkansas Lumber Company et al., of Malvern, Ark., against the St. Louis, Iron Mountain & Southern et al., the commissioners say:

"1. Rates on yellow pine lumber from Little Rock and Malvern, Ark., to Thebes and East St. Louis, Ill., St. Louis and Kansas City, Mo., and Wichita, Kans., not found unreasonable.

"2. Rates on yellow pine lumber from Malvern to Memphis, Tenn., and from Malvern and Little Rock to Springfield, Carthage and Joplin, Mo., Pittsburgh, Coffeyville, and Fort Scott, Kans., and Wagoner, Okla., found unreasonable. Reasonable maximum rates prescribed."

In the commission's investigation into the lumber rates from Helena, Ark., and other points to Omaha, Neb., Des Moines, Iowa, and other destinations, they say:

"Tariffs proposing increased rates on yellow pine, cypress, and hardwood lumber from southwestern points and points in Mississippi and eastern Louisiana to the Omaha group and other destinations were canceled in compliance with order issued in connection with our first report in this case, 33 I. C. C., 297. Upon rehearing, in connection with various fourth section applications, the rates formerly filed are found to be justified. Fourth section relief granted lines having circuitous routes. Other fourth section relief denied."

INTERSTATE COMMERCE COMMISSION APPLICATIONS.

The commissioners have authorized the Chicago Great Western to maintain a rate on sash, doors, and blinds, carloads, from Dubuque, Iowa, to St. Louis, Mo., via the line of that road, Des Moines, Iowa, and the Wabash Railway, the same as the rate contemporaneously in effect on like traffic from and to the same points via the more direct line of the Chicago, Burlington & Quincy, and to maintain higher rates from, to or between intermediate points for distances in excess of 388 miles, provided that the rates from, to or between said intermediate points do not exceed 18.5 cents per 100 pounds.

The commissioners have also authorized the petitioners to maintain a rate on lumber from Chicago and points taking the same rates to Sioux Falls and Level Siding, S. D., the same as the rate contemporaneously in effect via the Illinois Central and to maintain higher rates to intermediate points, provided that the present rates to said intermediate points are not exceeded.

INTERSTATE COMMERCE COMMISSION SUSPENSION ORDERS.

The commissioners have suspended until April 9 the operation of tariffs of the Missouri Pacific, and the St. Louis, Iron Mountain & Southern.

The suspended tariffs name proposed increased commodity rates on hardwood lumber, in carloads, from various points of origin in Louisiana and Arkansas to Rochester, N. Y., and points basing thereon.

The proposed rates are ½ and 1 cent per 100 pounds higher than those now in effect. The present rate from Hope, Ark., Alexandria, La., and points taking the same rates to Rochester is 34.5 cents and the proposed rate is 35 cents.

EAGER-KEEFER.

William A. Eager, well known in the Chicago lumber trade, in which he has been for many years prominent, surprised his numerous friends ten days ago by the announcement of his marriage to Miss Irene Keefer, of Champaign, Ill., the ceremony having been performed by Dr. W. O. Waters, of Grace Episcopal church, this city. The bride and groom met while summering at Silver Lake, Wis., where Mr. Eager has a cottage. The groom, who is a prominent member of the Lumbermen's Association of Chicago and of the Chicago Yacht Club, is now receiving the hearty congratulations of his friends.

Business Changes, Incorporations and Fires

New Concerns

Grand Rapids, Mich.—The Warner-Newton Lumber Co.; $50,000 capital. J. W. Warner, H. P. Newton, B. L. Warner and M. W. Newton.

Stanley, Wis.—The Owen and Northwestern Lumber Co. has been organized by the John S. Owen Lumber Co., of Owen, Wis., and the Northwestern Lumber Co., of Stanley, Wis.

Ottawa, Can.—Lander Lumber Co., Ltd.; $200,000 capital. Headquarters at Lander, B. C.

Centralia, Wash.—The M. C. & M. Lumber Co.; $6,000 capital. E. W. Miller, Louis Charneski and John F. Loughran.

Dighton, Kans.—Howard C. Wilson has engaged in the retail lumber business.

Salamanca, N. Y.—Merrimac Lumber Co.; $50,000 capital. J. B. McCabe, J. A. Smith, F. Morrison, Warren. Pa.

Olympia, Wash.—Skookum Railway & Logging Co.; $50,000 capital.

Lake Charles, La.—The Richards Lumber Co.; $200,000 capital. E. Elias Richards, president; T. H. Watkins, vice-president; Maurice Rosenthal, secretary and treasurer and Edward P. East.

Luxora, Ark.—The Garden Land & Timber Co.; $1,500 capital. George E. Carten, Alvin Wunderlich and A. C. Eckert.

Vincennes, Ind.—Reel-Osterhage Lumber Co; $50,000 capital. G. F. Osterhage, Freelandville, Ind.; John Cummins, Bruceville, Ind.; E. C. Reel, W. H. Vollmer, L. A. Meyer and L. H. Vollmer, Vincennes.

Berryville, Va.—Hyde County Land & Lumber Co.; $300,000 capital. H. C. Warden president; W. A. Baker, secretary.

Klamath Falls, Ore.—Chelsea Lumber & Box Co.; $50,000 capital. H. R. Dunlap, C. B. Browne and H. C. Merryman.

Wilmington, Del.—Caribbean Timber Corporation, to deal in timber lands; $250,000 capital.

Wilmington, Del.—Goodyear Yellow Pine Co.; $2,000,000 capital.

Coxheath, Ala.—The Coxheath Lumber Co., of Coxheath, Marengo county; $15,000 capital. Louis Pierce, J. B. Cox, J. D. Jones, W. J. Miller and P. C. Byrne.

Tuscaloosa, Ala.—The Samuel Lumber Co.; $2,000 capital. T. L. Samuel, C. Lutz, both of Montgomery and R. D. Samuel, of Tuscaloosa.

Sandy, Ore.—The Bruns Lumber Co.; $2,000 capital. Ed F. Bruns, Herman P. Bruns, Fred L. Proctor.

Detroit, Mich.—Grace Harbor Lumber Co.; $140,000 capital. Lewis H. Jones, John Leitch, Roy S. Leitch.

Little Rock, Ark.—The Arkmo Lumber Co.; $50,000 capital. Gordon H. Campbell, president; S. L. Ehrman, Grover T. Owens and T. L. Bond.

Dunnelton, Fla.—Spinks Manufacturing Co.; $50,000 capital. Z. Spinks, president; T. B. Lander, vice-president and L. W. Duval, secretary and treasurer.

Albany, Ga.—Southern Lumber & Tile Co.; $10,000 capital. A. H. Stephenson, Raymond Werdon and others.

Valdosta, Ga.—Williams Lumber Co.; $5,000 capital. H. R. Williams and W. A. Williams.

Shreveport, La.—Peavy-Wilson Lumber Co.; $1,000,000 capital. A. J. Peavy, president; B. J. Wilson, vice-president and John S. Welsh, secretary and treasurer. (Details given in last issue).

Chattanooga, Tenn.—Chattanooga Manufacturing Co.; $50,000 capital. L. D. Drewry, president; S. T. Lewis, vice-president and general manager; J. S. Drewry, treasurer and H. C. Piper, secretary.

Charleston, S. C.—Horry Red Cypress Co.; $150,000 capital. L. D. Lide and H. S. McCandlish.

Picher, Okla.—Picher Lumber Co.; $5,000 capital. M. A. Quillan, W. A. Cline and May Cline.

Toledo, O.—Midland Creosoting Co.; $75,000 capital. A. G. Wright, H. G. Jennison, H. G. Hammond, L. J. Bayer and W. B. Wertz.

New Mills

Wausau, Wis.—The Wisconsin Box Co. is building a sawmill, with a capacity of 40,000 feet in ten hours.

Graysburg, Tex.—William Graydon will build a hardwood sawmill.

Bolton, N. C.—The Waccamaw Lumber Co. will rebuild plant recently burned.

Union, Miss.—The J. R. Buckwalter Lumber Co. will build a veneer plant.

Grenada, Miss.—George C. Brown & Co., of Memphis, Tenn., have acquired timber in Calhoun and Grenada counties and will erect a sawmill with daily capacity of 40,000 feet.

Southwick, Ida.—Ted Roberts is erecting a shingle mill near here with daily capacity of 25,000 shingles.

Marianna, Fla.—The Marianna Mill Work Co. will rebuild plant, including planing mill and sash and door factory.

Jacksonville, Fla.—The Gress Manufacturing Co.'s lumber yard reported burned at a loss of $175,000.

Rosston, Ark.—John H. Dixon is planning the erection of a sawmill with daily capacity of 20,000 feet.

Jackson, Ky.—T. S. Sherman has purchased standing timber in eastern Kentucky and it is reported that he will install mills and machinery to get this timber cut for the market.

Tupper Lake, N. Y.—The Oval Wood Dish Co., of Traverse City, Mich., is erecting an extensive mill plant at this place.

Business Changes

North English, Ia.—The Home Lumber Co. has recently put in a yard at Atkins, Ia.

Circle, Mont.—The Montana Lumber Co. is putting in a retail lumber yard here.

Minneapolis, Minn.—The O. W. Schulz Lumber Co. has sold its retail lumber yards at Kasson and Mantorville, Minn., to the Gibson Lumber Co., of this place.

Minneapolis, Minn.—The Young Lumber Co. has purchased the retail lumber business of H. H. McCray & Co., of Pine Island, Minn.

Tamarack, Minn.—The Dower Lumber Co., of Wadena, Minn., has purchased the retail lumber yard of the Tamarack Lumber Co.

Minneapolis, Minn.—The Thompson Yards, Inc., have purchased the business of the Haight Lumber & Machinery Co., of Mandan, N. D.

Mt. Pleasant, Tenn—Cooper-Smith Lumber Co. filed notice of change of corporate title to Sowell-Smith Lumber Co.

Litchfield, Ill.—Baldwin & Wier have sold out to the F. I. Taylor Lumber Co.

Indianapolis, Ind.—The H. V. Cook-Richter Co. is now H. V. Cook.

Delta, Ia.—H. H. Lynn has sold out to the Spahn & Rose Lumber Co., of Dubuque.

Franklin, Ky.—The Stewart & Hayden Lumber Co. is now the Stewart Lumber Co.

Lapeer, Mich.—The Wilcox Lumber Co. has sold out to Frank R. Cutting.

Rushmore, Minn.—S. T. Wood has sold out to the Young Lumber Co.

Espanola, Wash.—The Eddy Lumber Co. has sold out to Weyen & Thiemens.

Estherville, Ia.—The A. D. Foot Lumber Co. has sold out to J. J. Harker.

Mount Pleasant, Ia.—Ditmars, Ayers & Co. have sold out to V. Nagle & Son.

Marshall, Mich.—Day & Storr have sold out to Deuel & Buchanan.

Minneapolis, Minn.—Bintner & Lawson are now known as Lawson & Nelson.

Aquilla, Tex.—The J. S. Pool Lumber Co. has sold out to C. G. Foust.

Lynchburg, Va.—Massie & Pierce, Inc, will be known after January 1 as the Massie-Morrison Lumber Co., Inc.

De Queen, Ark.—The Beekman Saw Mill Co. has sold out to the Missouri Lumber Co., of Kansas City, Mo.

Ventura, Cal.—Ventura Mill & Lumber Co. has sold out to the Peoples Lumber Co.

Clarion, Ia.—Ahmann, Bock & Co. have sold out to the Pyramid Lumber Co., of Dubuque.

North Kansas City, Mo.—The Ed H. Kienzle Lumber Co. has changed its name to Kienzle Lumber & Mill Co.

St. Louis, Mo.—The Walsh-Griffith Tie & Lumber Co. filed a statement showing decrease of its capital from $100,000 to $50,000.

Blackfoot, Ida.—The Idaho Lumber Co. has sold its eighteen lumber yards to the Boisé-Payette Lumber Co.

Watsonville, Cal.—W. L. Eckert has sold out to the San Vincente Lumber Co.

West Lebanon, Ind.—Stolley & Frame now Hans Stolley.

Cottonwood Falls, Kan.—The West Houghton Lumber Co. has sold out to the McDowell Harman Lumber Co.

Paintsville, Ky.—The Conley-Stafford Lumber Co., of Hager Hill, and Teass & Davis Lumber Co. have consolidated as the Paintsville Lumber Co.

Minneapolis, Minn.—The Lenox-Knudson Lumber Co. has changed its name to the Lenox Lumber Co.

Highmore, S. D.—A. N. Gerhart has sold out to the Loonan Lumber Co., of Sioux Falls.

Rockcut, Wash.—The Walsh Lumber Co. is closing out.

McConnells, Man.—The Central Lumber & Implement Co. has sold out to R. M. Stone.

Maroa, Ill.—Parker & Gray have sold out to W. M. Myers.

Bardwell, Ky.—T. T. Morgan has sold out to the Bardwell Lumber Co.

Belzoni, Miss.—A. N. Clark has sold out to Allen & McClintock.

Olympia, Wash.—The Olympia Shingle Co. has purchased the plant of the Democratic Emergency Shingle Co. and will begin operations at once.

Baxter Springs, Kan.—The C. E. Matthews Lumber Co., of Kansas City, Mo., is opening a yard here.

Wetumpka, Ala.—The Ensign Yellow Pine Co. has been succeeded by the Ensign Yellow Pine Co., Inc., of Delaware.

Prescott, Ariz.—The Clark & Adams Co. has been succeeded by the Prescott Lumber Co.

Des Arc, Ark.—F. H. McCormack has bought the retail yard of the Des Arc Lumber Co.

Fires

Pineville, Ky.—Rice Lumber Co.'s warehouse, office and lumber sheds burned; loss $15,000.

Thorndale, Tex.—Urban & Waiser's planing mill burned; estimated loss $30,000.

Greensboro, N. C.—South Atlantic Lumber Co.'s stock of lumber burned; loss $100,000.

Amarillo, Tex.—The plant of the Amarillo Sash & Door Co. burned, entailing loss of approximately $50,000, fully insured.

North English, Ia.—Fire destroyed the lumber yards of the Acme Lumber Co.; loss $25,000.

Medina, O.—Fire in the supply yard of the A. I. Root Co. destroyed 1,000,000 feet of lumber, valued at approximately $35,000, fully covered by insurance.

Sturgeon Bay, Wis.—The dry kiln of the N. S. Washburn Lumber Co. damaged by fire to the extent of $1,500; fully insured.

Milwaukee, Wis.—The three-story interior finish plant of the Wollaeger Manufacturing Co., with machinery and equipment destroyed by fire. Loss on building $15,000; on machinery and equipment, $25,000 and on finished material $10,000, all covered by insurance.

Digitized by Google

The News Miscellany of the Lumber World

Inland Empire News

Spokane, Wash., Dec. 20.—Last month was the best November from the standpoint of building construction that Spokane has had in five years.

SPOKANE, WASH.

Spokane bank clearings also show a remarkable increase. Last month they amounted to $28,153,687, as against $18,547,449 in November, 1915, a gain of 51 percent.

The building of six new dry kilns of the most modern construction was begun recently by the White Pine Sash Co. of Spokane. The kilns, with machinery for handling the lumber, will cost approximately $30,000. They will replace those now used by the company and will increase its drying capacity more than 50 percent. Within the kilns will be installed mechanical equipment for stacking the lumber on edge and for removing it. The construction will take from six to eight weeks. H. G. Klopp is president of the company, E. H. Stoehr is secretary and A. W. Lammers is treasurer.

To promote fellowship among business men whose problems are large and whose interests are common, thirty-eight northwestern lumber manufacturers, logging contractors and logging jobbers formed a loggers' club at a meeting in Spokane recently. Huntington Taylor, manager of the Edward Rutledge Timber Co., of Coeur d'Alene, Ida., was elected president. The vice presidency went to W. H. Webber of the Webber Logging Co. of St. Maries, Idaho, and R. M. Hart of Coeur d'Alene was named treasurer. J. C. H. Reynolds, secretary of the Employers' association of Spokane, the only Spokane man elected to office in the Loggers' club, was selected as secretary. Among the members are a number of prominent lumbermen of Spokane. The territory from which the organization draws its members is eastern Washington, northern Idaho, western Montana and eastern Oregon. The objects of the club, according to Secretary Reynolds, are "to protect and promote the industrial interests of its members; to inform and advise its members on several state and local legislation, revenue and taxation; to secure a full understanding of the conditions surrounding the logging industry; to establish uniform customs and usages among loggers and logging contractors; to standardize camp equipment; to study together for mutual benefit the best methods of logging in a country which presents unusual physical conditions—roughness of country, deep snows of winter season, drouth of the summer and its extreme fire hazards, and, finally, for the promotion of fellowship among the members of a fraternity whose problems are large and whose interests are common."

• • •

Potlatch, Ida., Dec. 15.—The big new gymnasium and club house which the Potlatch Lumber Co. has built for the Amateur Athletic club at Potlatch, Ida., was opened and dedicated last week. The building was turned over to the athletic club by General Manager A. W. Laird, and was accepted on behalf of the club by President M. W. Williamson.

POTLATCH, IDA.

Native cedar and white pine have been used in both interior and exterior construction, and an unusual and pleasing deviation from the conventional exterior treatment has been effected by a finish of spar varnish with white trimmings. The gymnasium is about 60 feet square, and the ceiling is 25 feet high. There are commodious card and reading rooms on the main floor, which have been luxuriously furnished by the club in fumed oak and Spanish leather. There is a large balcony on the second floor overlooking the gymnasium; a beautiful banquet and ball room and large electrically equipped kitchen.

A locker room in the basement is finished in white enamel and is equipped with 200 lockers. Six shower baths, also in the basement, are capable of taking care of 100 hot baths an hour. Clear maple floors and a modern system of indirect lighting have been used throughout the building, making it one of the most complete and beautiful structures of the kind in the Spokane country. That the gymnasium and club facilities fill a long-felt want is evidenced by the fact that the membership is over 450.

Middle States News

Buffalo, N. Y., Dec. 22.—The Buffalo Lumber Dealers' Association, formed recently, is to give a dinner some time during the next three weeks, the guests being the contractors of Buffalo. The association, while young, has had a beneficial influence locally, and includes most of the leading retail concerns of the city. Clark W. Hurd is president, and K. C. Evarts, secretary.

BUFFALO, N. Y.

Mixer & Co., one of the leading wholesale lumber concerns here, will make a change of office location early in the new year, moving from the Prudential building to the newly-completed Niagara Life building, at Franklin and Mohawk streets, where several connecting offices have been taken. Growing business has made the change necessary.

H. T. Trotter, a local lumber salesman with wide acquaintance through the state, is to go into the wholesale business in Rochester on January 1, with Messrs. Kelleran and Turner, formerly with the W. M. Ritter Lumber Co. sales force, as partners.

Royal T. Howard, formerly a prominent lumberman of Batavia, died at the home of his daughter, Mrs. F. D. Towne, in Buffalo, on December 14, after a brief illness. He lacked only a few days of being 90 years old. He was for years a member of the lumber firm of Howard & Olmsted, at Batavia, and then of R. T. Howard & Co.

Up to December 1, Buffalo was over $1,000,000 ahead in building operations for the year, as compared with 1915. This record is pleasing to the builders and real estate men, who say that plenty of operations will be carried on as soon as the weather becomes suitable. Building work this month has not been active thus far, as snow has prevented much from being done that is under contemplation. Nevertheless, the record for the year will probably be the largest in the city's history, which indicates a healthy growth in general business here.

Southwestern News

Shreveport, La., Dec. 22.—The organization of the Peavy-Wilson Lumber Co., capitalized at $1,000,000, with stock paid up, is the most important yellow pine development here lately. The company, composed principally of prominent Louisiana and Texas lumber manufacturers, will without delay build a mill, with capacity 150,000 feet daily, near Leesville, La., and will construct an extension of a railroad from Long Leaf, La., to a point on the Kansas City Southern railroad near Christies, La. With the Crowell & Spencer Lumber Co. and its associates, including the Meridian Lumber Co., the Alexandria Lumber Co. and the Pawnee Land & Lumber Co., the newly organized concern has bought 126,000 acres of timber in Vernon, Sabine and Natchitoches parishes, being the holdings of the Southland Lumber Co.

SHREVEPORT, LA.

Cut-over lands in this section are being settled by many families from the north. There seems to be an unusual rush to these lands lately, especially in the neighborhood of DeRidder where the Long Bell Co. is putting about 100,000 acres on the market. Exhibits of products grown on cut-over lands are proving especially attractive to the homeseekers. The state department of agriculture is helping in the publicity of these lands for farming, and especially for sheep raising.

The plant of the Germain-Boyd Lumber Co., near Atlanta, La., had a very close call recently from a tornado which struck that town and destroyed nearly all the buildings in the place. The lumber plant was a short distance out of the tornado's path.

• • •

Little Rock, Ark., Dec. 22.—The Fordyce Lumber Co. of Fordyce, Arkansas, has closed down until January 1. In the meantime it is making some needed repairs on and about the plant. This company on December 1 placed in effect a new schedule of wages for its employes which will mean a considerable outlay to the company, as it employs about one thousand men.

LITTLE ROCK, ARK.

It is reported that the Memphis Sash & Door Co. will resume operations at its plant located at Malvern, Arkansas. This plant has been closed down for the past several years.

The Arkansas Railroad Commission, at its regular monthly rate meeting on December 7, approved the application of the railroads operating in this state, and amended the demurrage rules so as to provide a sliding scale of rates. Forty-eight hours' free time is allowed for the loading and unloading of cars at shipping points and points of destination. The demurrage rate for one day after the free time is $1. For the second day it is $2, for the third day it is $3, and for each day thereafter it is $5. The order became effective on December 18, and will be discontinued on February 28, 1917.

Gulf Coast News

Beaumont, Tex., Dec. 22.—At least three and probably four large sea-going vessels will be built in Beaumont during the next eight months, to cost in aggregate about $500,000, and one schooner, the first of its size ever built here, will be completed within two weeks. This boat will cost, complete, about $50,000. Henry Paggio, prominent lumber exporter of Gulfport, Miss., will build two of the schooners.

BEAUMOMT, TEX.

Construction of the Marie Louise, the three-masted schooner being built in the Beaumont shipyard by Gus Nelson and Ansel Howland for the Orange Maritime Corporation, will be completed and the vessel will be launched with appropriate ceremonies on New Year's day. This is the first sea-going boat ever built in Beaumont and her construction has started a great industry in Beaumont that will mean much to this city, financially and also from the standpoint of publicity. The vessel was designed by Gus Nelson. She will cost approximately $50,000.

Gus Nelson also designed the second schooner. This boat will be built by Mr. Nelson and Ansel Howland for the Orange Maritime Corporation at a cost of $80,000. It will take about seven months to build her. Her foundation has been laid and the time of laying the keel will be fixed as soon as the material is on the ground.

• • •

New Orleans, La., Dec. 21.—Rapid extension of the railroad embargo in the north and east promises further serious curtailment of lumber shipments from this section. According to latest advices reaching here the New York Central and Grand Trunk have established complete embargoes. The cities of Cleveland, Akron and Youngstown are entirely embargoed, and Detroit and Toledo partly embargoed. The Baltimore & Ohio has declared an embargo out of Cincinnati. Little business is moving east of Pittsburgh.

NEW ORLEANS, LA.

The steamships Siskiyou and Mercator, chartered by the J. G. Rainwater Lumber Co., are expected this week to load here and at Gulfport, Miss., for Colon. These ships will carry each about one million feet of lumber. With the forwarding of this lumber the J. G. Rainwater Co. will have virtually

Digitized by Google

completed its extensive contracts recently entered into for the supplying of lumber to the Panama canal.

The usual suspension of operations by mills over the holiday period will take place, and several mills are planning to close for an even greater time than ordinarily, owing to the abnormal conditions brought about by the car shortage.

Secretary George E. Watson is busily engaged making preparations for the extensive exhibit campaign to be carried out during the coming winter months by the Southern Cypress Manufacturers' Association at various retail association gatherings. Although a complete list of dates where the association will make displays has not yet been prepared, it is certain that the work done will be on an elaborate scale never before undertaken by the association.

A. G. T. Moore, assistant secretary of the Southern Pine Association, is in Washington attending a hearing of the reclassification case and taking further steps looking to relief from the car shortage.

* * *

HATTIESBURG, MISS.

Hattiesburg, Miss., Dec. 20.—Both the Hattiesburg and Sumrall mills of the J. J. Newman Lumber Co., which were closed down about ten days ago by the employes when they were refused an increase in wages of twenty-five percent for the common labor and ten percent for the skilled labor, are still shut down. Manager W. J. Haynen announced that the mills will be closed down indefinitely.

The Foster Creek Lumber & Manufacturing Co., who are building a large double band and gang mill at Dayton on the Yazoo and Mississippi Valley railroad, are ready to place the machinery in the mill and expect to have the entire plant completed before next summer.

The Kola Lumber Co. at Kola, Miss., which lost its planing and dry kilns by fire a few weeks ago, is rebuilding them and will be ready to kiln dry and dress lumber within a short time.

The Tallahatta Lumber Co., which owns several hundred million feet of yellow pine timber in Jones, Perry and Forest counties east of Hattiesburg, is building a logging road from this city to a point about fifteen miles in the center of its timber holdings.

Central Southern News

BIRMINGHAM, ALA.

Birmingham, Ala., Dec. 21.—B. E. Kenney Lumber Co., Guin, Alabama, has bought a big body of fine timber and is building a modern mill. It recently placed an order with L. Moore Dry Kiln Co., Jacksonville, Fla., for a dry kiln of 20,000 daily capacity.

The Henderson Lumber Co., which has just completed one of the largest sawmills and lumber plants in the state, began operation a few days ago. The company has a million-dollar tract of timber.

In Birmingham last month 422 buildings were erected at a cost of $204,309, showing an increase of 37 percent over last year.

McMillan Bros., a large turpentine firm, have purchased 9,000 acres of timber lands from Vizard Investment Co. of Mobile, Ala., in the center of Mobile county.

* * *

NASHVILLE, TENN.

Nashville, Tenn., Dec. 22.—Creditors of John M. Smith, a prominent lumber dealer of Dickson, Tenn., against whom involuntary bankruptcy proceedings have been filed in the United States District Court, at Nashville, held a meeting, and have named H. T. Cowan of Dickson trustee. Smith disappeared some time ago, and no trace of him has ever been found. His liabilities aggregate more than $100,000, while the assets are $47,788. Nashville lumber firms had claims amounting to $10,000 or more.

The Traffic Bureau of Nashville has filed a complaint with the Tennessee Railroad Commission against the Nashville, Chattanooga & St. Louis Railway, seeking to have an increase in rates on lumber shipped from Memphis to Nashville suspended.

At a late meeting of the Nashville Lumbermen's Club R. S. Maddox appeared before the club and called attention to the importance of securing progressive legislation in Tennessee for the protection of forests. Mr. Maddox is head of the state department of forestry, and called attention to the enormous loss caused by forest fires, many of which are due to ignorance or maliciousness.

Ohio Valley News

EVANSVILLE, IND.

Evansville, Ind., Dec. 22.—A few days ago Maley & Wertz, hardwood lumber manufacturers, of this city, shipped a carload of walnut lumber to New York, and from that city it was carried by steamer to England, to be used by the British government in the manufacture of aeroplanes. This is the second order for walnut lumber received by this firm from the British government during the past month.

W. S. Burgess, of Maley & Wertz, has returned from a business trip to northern Ohio and southern Michigan, and reports trade conditions better than they have been for some time past.

Daniel A. Wertz will attend the annual state meeting of the Indiana Hardwood Lumber Manufacturers' Association, at Indianapolis, on January 17. He is the president of the state association. He will be accompanied by a large number of lumbermen from this section, who will ask that the convention in 1918 be held in Evansville.

D. B. McLaren, of the D. B. McLaren Lumber Co., has returned from a business trip through the southern states, and reports business coming along all right. He says things look bright for 1917.

On Saturday, December 16, the Globe-Bosse-World Furniture Co., of this city, of which Mayor Benjamin Bosse is president, gave away $12,000 in cash bonuses to the five hundred employes of the factory, as a Christmas gift.

* * *

LOUISVILLE, KY.

Louisville, Ky., Dec. 22.—A report just received from the building inspector's office shows a very satisfactory condition in Louisville during the year. Totals for December it is said will show another gain, and officials of the department are of the opinion that the early part of 1917 will show steady gains, considering the volume of work in sight, principally in the architects' offices. A good deal of work is being carried over uncompleted, but will figure in the fiscal year winding up on August 31. In addition to the reports of this office a great deal of fine residence work has been done this year outside of the corporate limits of the city, and does not show in the totals.

Two good war orders have been reported at Louisville during the past few days, one of which is a big order for gun stocks and propellor blades for aeroplanes, placed with the Wood Mosaic Co., of New Albany, which is advertising for 500 cars of walnut logs; and the other with the C. C. Mengel & Brother Co., of Louisville, for approximately 1,500,000 feet of mahogany, to be used largely in the construction of aeroplanes.

* * *

CINCINNATI, OHIO.

Cincinnati, O., Dec. 22.—Details regarding the recent purchase of the well known lumberman, F. M. Massie, of Mateawan, West Virginia, of 1,200 acres of valuable timber land on the Twelve Pole Creek, in Wayne county, West Virginia, recently have been received by Cincinnati correspondents of the purchaser. Development of the big tract will be started in the very near future and it is the intention of Mr. Massie to install at once a large band saw mill on the grounds. The consideration involved in the deal is said to be $25,000.

At the last meeting of the Cincinnati Lumber Exchange, a subsidiary of the Chamber of Commerce, the attention of the members was engaged by a spirited discussion of the new demurrage rates and of the reconsignment privilege.

Cincinnati furniture manufacturers are going to make a determined bid it is said, for a goodly part of the South American order for $750,000 worth of household furniture, recently secured through a Chicago company. The immense order will be placed with numerous furniture manufacturers throughout the country, it is said, and Cincinnati manufacturers expect to get a fair share of it. It is said the same concern is about to announce the securing of a phonograph and piano order from South America which will run close to $1,000,000.

It was learned here recently that stockholders of the American Lumber Co. have lodged protest against the recent sale of the corporation, said to be an $8,000,000 concern, to Otis & Co., of Cleveland. The sale was conducted by the receiver, at Albuquerque, New Mexico. The stockholders, it is said, declare that if given sufficient time, they could engineer a sale of the property at $800,000.

Pacific Coast News

CENTRALIA, WASH.

Centralia, Wash., Dec. 23.—Owing to a large order for aeroplane spruce the Kleeb Lumber Co.'s plant will soon be working a day and night shift. The plant has been thoroughly overhauled and 40 feet of additional dock built.

One of the largest orders for creosoted piling ever placed in the Pacific northwest is now being filled by the three largest creosoting companies in the Puget Sound district. The Canadian Pacific railway is the purchaser of the piling, and the St. Paul & Tacoma Lumber Co. has secured a large share of the business.

Although a little early to secure an actual estimate of the amount of lumber manufactured by Aberdeen mills in 1916 an approximate estimate made by a local manufacturer fixes the total lumber output of the mills of that city, which includes the West mill at Junction City and the Gray's Harbor Commercial Co.'s mill, at Cosmopolis, at about 380,000,000 feet. The amount includes about 20,000,000 feet by the former Federal mill, now known as the American No. 2; 32,605,000 feet by the West mill, and 60,000,000 feet by the Cosmopolis plant. This also includes the lumber that has gone into lath.

• • •

TACOMA, WASH.

Tacoma, Wash., Dec. 16.—One of the most important projects for the development of Tacoma was announced early in December when plans for locating a division post of the United States Army on the prairies south of the city were made public. All arrangements have been completed with the War Department and all that remains to be done is for Pierce county to give the site to the government. A bond election, to authorize the issue by the county of $2,000,000 worth of bonds for condemnation of the land, will be held January 6.

Secretary of War Baker has announced that if the site is turned over to the war department at least 15,000 men, of all branches of the service, will be kept constantly at the camp which will be used as a maneuver ground for all the troops in the west. At least 7,000 acres are desired by the department. It is considered almost certain that the bonds will be voted.

The bringing of the camp to Tacoma will have its effect on the lumber market as millions of feet of lumber will be needed for the construction of temporary and permanent buildings. With the announcement of the plans for new shipyards made last month and the location in the city of several new factories, the outlook for the future is brighter than at any time for many years.

• • •

SAN FRANCISCO, CAL.

San Francisco, Cal., Dec. 20.—Shipowners' Association of the Pacific Coast, with headquarters in San Francisco, reports that lumber charters have been made recently to Cape Town and other South African ports at 250 shillings, to Melbourne and Adelaide at 132 shillings, to New Zealand at 120 shillings and to Hawaii at $17.50. During November coastwise vessels brought twenty-nine cargoes from the lower Columbia district to California ports, carrying 25,415,000 feet, and in addition considerable box shook was brought here on vessels other than lumber carriers.

In spite of the scarcity of cargo space a number of random cargoes have been sent to California ports of late and the marketing of these has done as much as anything else to keep prices from advancing. The lack of cars is largely responsible for this condition, tide-water mills in the northwest finding it impossible to ship orders and in many cases secure space on a coast-wise vessel and send a cargo to California to make yard room. This practice naturally tends to bear down values and to cause retail yards to buy more lightly from usual sources.

• • •

GRAY'S HARBOR, WASH.

Gray's Harbor, Wash., Dec. 16.—Thirty-nine lumber laden vessels cleared Gray's Harbor in November, a greater number than during any other month in 1916. November cargo shipments were above normal, although they were 800,000 feet less than those of October. The Willapa Harbor shipments for November were the best of any month since the war began, in August, 1914. The shipments from both harbors would indicate that more tonnage is now available for cargo business, and with a big shipbuilding boom now in progress, this tonnage should increase, until Gray's Harbor can enjoy as heavy a cargo business as she did in the ante-war days. Prior to the war the harbor sent out as high as 60 shiploads of lumber a month.

Northern States News

CADILLAC, MICH.

Cadillac, Mich., Dec. 8.—While winter logging operations are being prosecuted as actively as the supply of men and other considerations admit, the probabilities are that the log cut in this section will not be sufficient for the needs of the trade the coming year. At Cadillac, for instance, there is not to exceed 8,000,000 feet of hemlock in pile at the six mills and this includes green lumber. In other words there is just about one good stock here instead of six. Naturally the manufacturers in northern Michigan are holding their hemlock pretty firmly and have shown some disposition to refrain from selling excepting to their regular trade and then only when the stock is ready for shipment. Quotations, based on 2x8, 12 to 16-foot, S 1 S 1 E, are $23 net, which means f. o. b. mill and without commissions.

One of the newest industries in Cadillac is the Cadillac Produce Co., in which three of the leading lumbermen of the city are prominently interested. W. L. Saunders, of the Cummer-Diggins Co., is president; Charles T. Mitchell, of Cobbs & Mitchell, Inc., and George H. Williams, of the Williams Bros. Co., are both large stockholders. The company is a large buyer of poultry, which it fattens for market; a large manufacturer of butter and a heavy buyer of eggs. A few weeks ago it had 10,000 chickens in its coops and fattening on cornmeal and buttermilk. Fifty men were employed by the company during the fall. The produce industry has taken a big step forward in Cadillac and it is now the produce center of the northern territory. Swift & Co. already have erected a new plant at Cadillac and are strong competitors for the produce business.

The new screen door factory, started late in November, has C. D. Burritt as manager. The company will employ from twenty-five to thirty men this winter and has a capacity for manufacturing about 600 doors a day.

The Cadillac Auto Truck Co. is now putting out two complete trucks a day and is enjoying a good business. It has just erected a new building and will move into it within a few days and will then have much greater facilities.

One of the best industries in Cadillac is the new shirt and neckwear factory, which is already operating 100 sewing machines. It is intending to add fifty more machines, but is finding a great scarcity of operators. The factory has orders ahead for eighteen months.

The Chamber of Commerce of Cadillac is doing great work and especially for the dairy industry of Wexford county. It now offers to any farmer in the county, who can give proper assurances of caring for it, a thoroughbred cow to be paid for on the installment plan. W. L. Saunders has personally supplemented this offer by agreeing to give to any farmer who has a cull bull a thoroughbred bull, exchanging them on the basis of pound for pound. He will stipulate that the cull bull be killed for beef.

• • •

REED CITY, MICH.

Reed City, Mich., Dec. 20.—The two hardwood flooring plants in this city, those of William Horner and the Welsh & Kerry Co., are running full time and have more orders than they can easily care for. Sam Horner, manager of the William Horner plant, says that prices are right up to the mark in every respect. His plant at Newberry, Mich., is also running actively.

F. A. Horner, a leading architect of Grand Rapids, Mich., spent several days in town last week visiting his brother, Sam Horner, the lumberman. The former has just finished the construction of the new armory for the Thirty-second regiment of the Michigan National Guard at Grand Rapids. The new structure cost $160,000 and is one of the best built buildings in the city. Mr. Horner received many compliments from state and army officials and citizens for the good work accomplished.

In addition to his lumber activities, Sam Horner has been running a bazaar which was held last week by the business men and ladies of Reed City for the benefit of a new community club house. The bazaar netted the enterprising promoters about $2,000.

The Current Trend of the Lumber Market

General Market Review

Several of the more important departments of the lumber business have shown unabated activity up to the very eve of Christmas and there are indications that this activity will not be seriously impaired during the coming holiday week and that directly after the first of the year it will resume in full volume. In one of the most important of these industries, yellow pine, demand has kept steadily ahead of production during the last three months, the only drawback being on shipment. The car building industry has been such a dominant factor and is so much stronger today than it was three months ago that in this department of consumption, at least, there is no immediate expectation of lessened trade. Every car shop in the United States is loaded up with orders. This presages not only a renewed demand for yellow pine, but also for coast fir; and while in the latter industry the movement of car material has not been so pronounced as in the southern product, yet there is a comparatively heavy pressure of the demand. In hardwoods, too, the movement has continued strong, interior finish factories having been crowded full of work and having sufficient on their books to keep them employed for several weeks after the resumption of operations in January. The automobile, furniture, agricultural implement and building industries are all using up large quantities of lumber and this activity is evidently not to be checked for several weeks at least. The trade barometers, such as Brookmire and others regularly at hand, indicate caution to some extent, but recommend buying of commodities as being comparatively safe for the next five or six months, the only contingency threatening this expectancy being an unlooked for early termination of the war. It is noted that when peace proposals were submitted two weeks ago, all markets reflected the crushing influence of the event and the only apparent strengthening factor was the belief that the proposals would not be entertained, as shown by later developments.

NORTHERN AND WESTERN PINE.

It is generally conceded that the demand for soft pine in all territories has been affected by the usual decline in consumption witnessed toward the close of each year. At the same time manufacturers and shippers were so well filled up with orders that they welcomed the slight respite as a decided relief. They consider it only temporary, however, as the pressure promises to be resumed early in January.

Stocks at northern pine mills are very greatly demoralized and scarcely anything in the shape of high grade lumber, either shop or selects, can be secured in quantity. As far as the low grades are concerned, there is an equally strong requirement and no adequate supplies, especially on box material, which is well cleaned up. The same conditions obtain in the Inland Empire, where stocks in both Idaho and Western pine are broken. Low grade material is also scarce in that section. Among the California mills there are no important changes. Practically all of the mills there have shut down for the winter and the scarcity of cars is greatly handicapping the delivery of such stock as is available. Prices, under all of these conditions, are holding firm at some of the best figures that have been quoted this year and occasionally an advance in one or two items is reported.

NORTHERN AND SOUTHERN HARDWOODS.

There is evidently a better demand for northern hardwoods than for southern in this immediate territory, but both are active and prices are held on a firm basis. Conspicuous among the northern woods just now is beech, one of the long neglected woods which had been relegated to the background by its competitors, maple and birch, but which of late, because of its availability and the scarcity of its competing woods, has come rapidly to the front. Hardwood flooring manufacturers say that they are selling beech flooring today practically on a par with maple flooring and the price obtained lately for the rough beech lumber indicates a surprising improvement in the standing of beech relative to the general market. Sales made around the middle of December on 4-4 beech were on the basis of $32 for first and seconds, $22 for No. 1 common and $17 for No. 2 common, f. o. b. northern mills. One of the scarcest items in the north just now is 2-inch maple, which lately has been held by some of the northern concerns on the basis of $53 for firsts and seconds, Chicago delivery. At the same time they have asked $45 for birch firsts and seconds Chicago delivery and $35 for No. 1 common. The demand for birch is unchanged, continuing strong and with only moderate supplies to draw from. Soft elm is likewise a leading factor in the northern movement, but the inquiry seems to be steadily ahead of the available supply. Basswood is one of the strongest woods in the market and it is understood that whereas, around the first of the month, car loads could be picked up for Chicago delivery at about $40, some of the northern Wisconsin manufacturers are now asking $42 f. o. b. Wausau. It is understood that stocks of basswood are low and broken.

As to the southern hardwoods, the revival recently occurring in the demand for plain oak is one of the marvels of the trade. It is probably true that many consuming manufacturers had contemplated the use of other woods in place of oak, but the organization of oak manufacturers seems to have recalled the virtues of oak to users and it is again occupying its place at the head of the hardwood procession, from which it will not likely be dislodged. Ash is in good request at something like the old prices. Red gum is going into consumption to a greater extent than ever and is bringing satisfactory prices in all grades, including sap. There is a noticeable renewal of demand for cottonwood, not only for the box grades, but for firsts and seconds inch and stocks are scarce.

SOUTHERN PINE.

The southern pine situation is materially strengthened at this season by the advent of line yard buyers, who have been lately making their presence felt at many of the southern manufacturing centers. Adding to this the unusual pressure of demand for car material and railroad stock and the cup of happiness of the yellow pine producers would seem to be brimming over, were it not for the inability to secure cars. Box cars are almost out of the question, but many yellow pine shippers are getting along fairly well in using gondolas and flats and even in that respect they are not able to get more than a fraction of their requirement.

The demand from the retail yards is only nominal at this season, as a rule, but because of favorable weather there has been more activity shown than had been expected. Prices are being held up at just as good a level as has been reported during the last several weeks. It is expected that dimension will hold firm during the usually dull holiday period and there are some who even predict a slight improvement in values. On the basis of recent transactions a fair price for dimension is around $4.50 discount. The fact that there were more freight cars ordered last month than ever before in a single month is a continually bullish factor in all yellow pine calculations.

NORTHERN HEMLOCK.

One of the recent developments of the northern hemlock situation is an advance of from $1 to $2 in prices all over the territory. This has been brought about largely through the steady and constant demand for dry stock through the fall and the increasing depletion of assortments. There are few concerns in either Michigan or Wisconsin today who are able to make up a well assorted car for the retail trade out of their own stocks. The supply of dimension is barely sufficient for the needs of the regular customers of the manufacturers and prices on all dimension items are decidedly firm. Lately the Michigan manufacturers have found it necessary to put up their quotations and last week were asking $23 net for 2x8's, 12 to 16 feet long, S 1 S & 1 E. This is the f. o. b. price and does not include commissions. Stocks in the lower peninsula are hardly one-half of what they were a year ago at this time. At Cadillac the report is that there are not to exceed 8,000,000 feet on hand at the six mills operating there and this they consider about enough for one well rounded stock.

Logging operations are going forward with vigor all through the north and it is reported that woodsmen are somewhat more easily obtained. However, the price of supplies and the rate of wages are so high that the expense of logging is said by operators to have increased much more in proportion than is covered by the recent advance in prices, so that a profitable market is not yet in evidence.

CYPRESS.

Representatives in this market of the cypress mills say that they have not yet experienced any great falling off in orders and inquiries, such as is usually witnessed at this time of the year. There is a good call for tank material, which is bringing just now the best of values; also the inquiry for finish and moulding stock is fair and factory items are evidently in short supply among manufacturing consumers. The handicap of the car shortage is quite visible, but some of the shippers say that they have been noticing a slight improvement in that respect lately. Prices are holding firm and occasionally there is a variation of 50 cents upward in some items that are in particularly good request. Stocks at the southern cypress mills are fairly well assorted, however, and the situation there, were cars plentiful, would be more than usually satisfactory for this time of the year.

SHINGLES.

A light demand and the recent finicky prices have conspired with the waning season to bring about a slackening of the buying that was observed in eastern markets three or four weeks ago and the shingle market has about returned to its normal condition of inactivity. However, there are some buyers coming out occasionally, as they believe that it will prove to be a good time to get in some reserve stocks. The car situation has modified only slightly, but the reduced demand renders delivery somewhat more satisfactory to those who desire to replenish. Average quotations on Friday of this week for clears were around $3.36 and for stars $2.87. Northern white cedars are in moderate request and quotations on both extras and standards are unchanged.

Gulf Coast Markets

This good report comes to us from New Orleans: "As was to be expected on the eve of inventory taking, there has been a slight falling off in demand evidenced in the yellow pine market during the past few days, and this slackening of trade is expected to continue over the new year. The market as a whole shows a very steady tone, and there is no disposition apparent among manufacturers to cut prices from the figures maintained for several weeks. Aside from the fact that the car shortage continues to be severely felt, the fundamental basis for pine is very substantial, and mill men and sales agents are unanimous in predicting an unusually good year for 1917. Many car material orders have been placed recently, and more are in sight. Sawntimber orders are numerous, and many mills are devoting themselves extensively to this item. Many mills will close for the holidays. European trade continues slack, but there is a steadily increasing demand from Central America.

NEW ORLEANS, LA.

"Improvement in demand for oak is still the predominant feature in the hardwood situation. This

The Lumber World Review
606 South Dearborn St. Chicago, Ill.

item, which has not been particularly strong for some time, is in especial call just at present. Tupelo gum is also ruling strong, with prices about stationary. Box factories are buying extensively of a number of the lower grades of several of the specialties.

"Although prices have been advanced on some classes of material, the rise is not general, and the market presents more of a firm, stable condition than the appearance of a boom.

"With prices satisfactory, and demand still good, cypress still evidences the healthy tone that it has shown for many weeks. Demand is not quite so heavy as it was a week or two ago, but is very substantial, and from the volume of inquiries received the 1917 trade, at least for the early spring months, will be phenomenal. Transportation conditions continue highly unsatisfactory, and recent efforts to improve the car situation have not succeeded."

* * *

HATTIESBURG, MISS.

The situation in the Hattiesburg district is reported as follows: "There has been but very little change in the car situation during the last ten days. Mills located on the large trunk line roads are probably getting in a few more cars than they were a month ago, but mills located on the small roads are having a great deal of trouble and some of them are not getting over 25 percent of the cars they need. Most of the mills will lose more time than usual during the holidays, but will keep their shipping crews loading what cars that come in so that their stocks will be worked down as much as possible when they are ready to resume operations.

"Lumber buyers are trying to get all their business placed before the holidays, but the manufacturers are not taking on very many orders."

Central Southern Markets

MEMPHIS, TENN.

A manufacturer of hardwoods writes us from Memphis as follows: "With reference to trade conditions and prospects for the immediate future, owing to the amount of orders on hand, the orders offered, together with the inquiries, we look for a firm or advancing market for the next several months.

"This refers particularly to gum and cottonwood. Oak is inclined to be somewhat draggy."

A well known hardwood manufacturer of Memphis in writing of the market, expresses these sentiments: "Regarding the present and future outlook of the hardwood lumber market, I wish to state that I am very optimistic regarding the lumber market, both for the present and the future.

"I feel that there is going to be a very strong demand for lumber all of next year, and I believe that we are going into a short or limited amount of stock on hand.

"I do not see anything but the most favorable conditions, and I believe we are going to have an excellent year during 1917."

* * *

BIRMINGHAM, ALA.

A correspondent sends us this report from Birmingham: "The lumber business continues good in this section considering the handicaps. The car shortage is retarding the movement of the product, but the condition is improving somewhat. Prices are fairly good. On some items the price obtained is very satisfactory. Railroads are buying considerable construction timbers. Local building is reported good.

"General business conditions in the Birmingham district are good. Many of the industries are increasing the wages of their employes."

* * *

NASHVILLE, TENN.

Satisfactory conditions in the Nashville market are indicated in this letter: "Nashville lumber firms are winding up 1916 in very satisfactory manner. Taking into consideration the conditions that have prevailed in the world the record has been very gratifying to lumber dealers and manufacturers.

"Business had a marked revival early in the year, with increased building operations and purchases by various manufacturers showing great improvement. The shortage of cars has been the main dark spot on the horizon during the latter part of the year, business having been limited largely to the number of cars available.

"Prices have held up fairly well on most lines of hardwood lumber, which is handled chiefly here. Stocks are low at the end of the year, and most of the big firms take a cheerful view of the outlook for 1917. They freely predict better demand, and stronger prices for the new year. It is believed that the light supplies will be a strong wedge in holding prices up during the year, and should there be any great increase in demand it is regarded as probable that many lines will soon run short."

South Atlantic Markets

GOLDSBORO, N. C.

A prominent North Carolina pine manufacturer writes us as follows: "The demand for North Carolina pine has been steadily increasing for the past six weeks. This is attributable to two facts: There was a large reduction on the part of the mills in production during the summer, and the demand for lumber in the south and west has greatly increased since the crops have come off. There has been an advance on all grades from $1.50 to $2 per thousand. We have every reason to believe that the demand will continue not only to January first, but all of next year.

"Our opinion is that next year will be one of the largest in building activities in the history of this country. Our reason for saying so is that every section of this country today has more money than it knows what to do with. The banks are eager and anxious to make loans even on one or two years' time with good security. This is going to be an incentive for building operations.

"We are at peace with the world and have got faith in the future of this country.

"If the manufacturers will be sane enough not to run their plants day and night also, and keep their production down, we believe that prices on North Carolina pine will advance from $1 to $2 a thousand."

* * *

CHARLESTON, S. C.

A manufacturer of cypress and pine writes us his view of the market as follows: "We feel very optimistic over the lumber market, and we truly believe that we are right on the eve of the best market that we have had in five years."

Another South Carolina mill man writes: "Our mill has not been in operation since April 1 and on this account we are not in position to judge market conditions.

"We think from what inquiries we are now getting and what orders are being offered us, the market is getting some stronger and prices have a tendency to advance."

* * *

GLENWOOD, FLA.

A manufacturer of long leaf pine writes us from Florida: "We beg to advise that prices are now advancing and the indications are that they will advance still more. There is not much surplus lumber and it is getting hard to place orders for immediate delivery. It looks to us as though the prospects for the lumber business are very good."

* * *

BALTIMORE, MD.

A leading exporter of Baltimore writes us as follows: "It is difficult for us to give you much of an opinion regarding trade conditions for the immediate future. Our business being exclusively export, we find the same governed and controlled by the conditions now ruling abroad.

"Only the United Kingdom ports are open for regular communication, and the British government's prohibition restricts very much the trade.

"Continental European ports are not in direct touch with this country, and therefore, shipments are almost nil."

New England Market

BOSTON, MASS.

A lumberman writing us from Boston says: "In the east the railroad embargoes are the principal factors in the lumber situation at the present. These embargoes have seriously hampered, in fact, almost stopped carload shipments. With the probability of hampering weather conditions in the next two months, relief from this congested condition of the railroads is not looked for. This has a tendency to strengthen prices on yard stock.

"Obviously, local wholesale business is almost at a standstill, while yard business is very good. A further advance in all hardwood prices is indicated."

Digitized by Google

Pacific Coast Markets

TACOMA, WASH.

This cheering report is sent us from Tacoma: "Not in many years has the lumber market in Tacoma shown such strength and it is a long time since prices have been advancing with the rapidity noted during the past two weeks. Practically all mills are selling lumber far above the list price and the tendency of the market is undoubtedly towards further advances. The car shortage, and the annual shutdown soon to take place are important factors in the situation but the real reason for the advance is a very concrete demand for lumber for immediate delivery.

"Lumbermen are much pleased over the condition and claim that the shutdown at Christmas time will prevent any tendency towards over-production by the Puget Sound mills.

"Discount Sheet No. 14 is still the nominal lumber price but it is expected that another sheet, giving the latest advances in the list, will be issued soon.

"Shingle makers are sharing the prosperity of the lumber mills, the demand for red cedar stars and clears being heavier than for many years. Prices have jumped far above the levels of the past seasons and shingles are quoted all the way up from $2.50, depending on ability to ship."

* * *

SAN FRANCISCO, CAL.

A correspondent writes us from San Francisco as follows: "The building trade in the San Francisco bay region is taking advantage of ideal weather conditions and more construction work, especially on homes, is now under way than at any period since the year following the fire of 1906. This does not mean that more lumber is being used, however, as builders figure that at least twenty-five percent less lumber is being used in the average home now being erected, due to the increased use of cement. The use of shingles in the large cities around San Francisco bay has fallen off fully one-half, but the demand in the country districts is more nearly normal.

"The eastern demand for California pine and redwood is showing considerable activity, but mill men are finding it impossible to fill orders promptly on account of the car shortage. The demand, however, has induced several operators to keep their plants open longer than usual and the surplus cut will be piled up to be shipped out in the spring, when it is believed there will be a very heavy call for timber products of all kind.

"Several new vessels have been added of late to the lumber-carrying fleet but so far there have been no changes made in charter rates.

Middle States Markets

PITTSBURGH, PA.

This letter expressing confidence in the market comes to us from a lumberman of Pittsburgh: "Our observation is that market conditions at present are about as satisfactory as one could wish. There has been a marked advance in all kinds and grades of lumber during the past thirty days. We notice it more pronouncedly in the lower grades. In spite of the rapid advance, buying seems to continue as briskly as heretofore. We are greatly handicapped through a shortage of car supply, and from present indications that will be a more or less permanent obstacle to an increased volume of business for some time to come.

"Most of the mills in our section have orders on their books now for all they can ship for sixty days. That is exactly our condition, and we consequently are going a little slow about booking future business, even though it is tendered us at advanced prices. We can see nothing to it but a rosy outlook for the balance of this year, and indeed, the first of next year."

* * *

PHILADELPHIA, PA.

A well known lumberman writes us from Philadelphia as follows: "I am satisfied that lumber has reached its maximum price, and that as soon as conditions for shipping become better we will have some revisions in prices, except on the highest grades. Still, we believe there will be a stiff market for the next sixty days."

Another Philadelphia lumberman says: "Between now and January 1, 1917, a demand sufficient to maintain prices with advances in some lines seems quite probable. There is no betterment of the car shortage situation, and car shortage is curtailing output of many mills and the curtailment is maintaining prices."

* * *

NEW YORK, N. Y.

The metropolitan market is thus described: "The local lumber market continues to show the strength and firmness which has characterized it the past several weeks, with every indication of holding that way, and, if anything, gaining in that direction. Demand seems equal to all the supply on hand, and, indeed, in some cases, a distinct scarcity of stock prevails.

"Prices are firm and advancing, and with the transportation facilities unequal to the occasion, higher prices are sure to obtain for such business as may be closed.

"The yellow pine trade is suffering perhaps more than any other branch, and wholesalers are unable to quote on many attractive inquiries. What the result of this condition, if it continues, will be no one knows, but some leading men in the trade are much alarmed and talk of a serious shortage of yellow pine lumber and timber.

"Generally speaking, the close of the year finds the trade in good condition.

* * *

BUFFALO, N. Y.

Conditions in the Buffalo district are reported as follows: "The lumber market is holding strong, and a marked feature nowadays is the increased strength shown by the higher grades of such woods as white and yellow pine, which in previous rises in lumber have not so generally participated as they are now doing. Wholesalers have been putting up prices during the past month, because they have seen their stocks rapidly disappearing, and have realized that to replace them would take much time, as well as more money than they paid for the original lumber. Referring to the white pine situation, one large concern advises that stocks are much depleted, and that common lumber will hardly meet the requirements of this market during the coming winter. The prediction is made that within the next three months prices will be considerably higher, and that those who neglect to make needed purchases will regret it.

"The hardwood trade has been on a fairly satisfactory scale recently, though the lack of cars has been felt, both in getting in and shipping out stocks. Cars are more plentiful here than in some other markets, but the supply is nevertheless nowhere near normal.

Inland Empire Market

SPOKANE, WASH.

A prominent lumberman of Spokane says of the lumber business: "We are shipping daily, and other mills are doing the same. The car shortage is not affecting the lumber business seriously. We could sell everything in our yards. All the eastern stocks are light, and buying is good with lots of orders.

"I can see nothing but good ahead in the lumber business, and I am sometimes accused of being too optimistic, but I believe my predictions will work out. When peace is declared, the American lumber business is bound to receive a tremendous stimulus. We never see a war picture where lumber supplies are not being destroyed, and in addition, artillery fire is wiping out the present structures and many of the forests as well. There must be heavy rebuilding when the war is over, and the American mills will be called upon to furnish the lumber for the work."

Southwestern Markets

ST. LOUIS, MO.

A manufacturer and dealer in yellow pine has this to say of the market: "Regarding lumber market prospects and conditions, will say it is our opinion that there will be very little, if any, change as to price or demand during the next sixty days.

"It is true in some sections the demand is not very great at this time; however, the mills are all supplied with sufficient orders to run them at least forty-five to sixty days and none of them are looking for business."

Confidence in the market is expressed in this letter from a well known St. Louis manufacturer

of sash and doors: "As to my opinion of the present lumber market and the prospects for the immediate future, wish to state that I have every reason to believe that the present values will be very firm during the next sixty or ninety days. In fact, I would not be surprised to see higher values prevail shortly after the first of the year.

"Just as soon as peace is declared there will undoubtedly be considerable buying for export. Just as soon as this buying starts I look for higher values than those prevailing at the present time."

* * *

CAPE GIRARDEAU, MO.

In response to a request from the Lumber World Review for an opinion on market conditions, a prominent manufacturer of Missouri writes: "Too busy trying to get cars to serve our customers to think much about the future.

"It looks like everybody wants lumber, but cannot get it because of all cars being used for grain, cotton and war munitions."

* * *

KANSAS CITY, MO.

The Kansas City market is reported by a well-informed correspondent as follows: "The yellow pine market continues strong, with all the recent advances well maintained. It is not an exaggeration to say that the average price is from $2 to $3 higher than it was a few weeks ago. The price is very irregular, owing to the influence of deliveries on values, and setting any definite marks is difficult. The list published by some firms can have no other object than to prevent the increasing of order files. In fact that seems the usual rather than the exceptional case. What business is being done is with no delivery date specified unless the delivery date is the only justification for the price. Ordinarily with invoicing about to begin the demand for lumber would be expected to almost cease. That is not the case in this territory this year.

"While no great amount of actual building has been seriously delayed by the car shortage, retail stocks have been cut down in many cases to the lowest levels they have known in years.

Ohio Valley Markets

CINCINNATI, OHIO.

Conditions in the Cincinnati market are reported as follows: "There is an air of uncertainty pervading the atmosphere of the yellow pine market here. The volume of business being transacted leaves little to be desired, in fact is reaching proportions larger than usual for this season, most of the demand coming from consuming sources which make quick use of the lumber. The mild fall weather which continued up to the last few days may have considerable to do with this, inasmuch as considerable late building work is in progress.

In the hardwood list, except for the continued car shortage, there would be little to report but continued good business. The country retailer is ordering with much more frequency. Quartered white and red oak, while showing more activity than for a couple of weeks, lack considerable of their old vim, the market being somewhat of a drag. Birch continues to be a feature seller of the northern woods, while gum probably leads the list of the southern product. A great deal of maple is being used by the interior finishes, maple floors coming into great popularity, while birch is well liked for fancy interior decoration. The curtailment of shipments from the south on account of the car shortage has hurt the cypress market considerably. Retailers report a heavy demand for cypress lumber, but their stocks are very low and badly assorted."

* * *

EVANSVILLE, IND.

This information on the hardwood market comes to us from a well-known lumberman of Indiana: "Relative to our opinion on the present lumber market and prospect for the immediate future, all hardwood lumber, with the exception of firsts and seconds and No. 1 common plain and quartered oak, both white and red, has been advancing, and we believe that it will continue to advance. However in the next 30 to 60 days, we do not look for any further advancements, owing to the New Year season. However, after that time, we believe there will be further advancements.

"Gum, elm and maple are being used more than ever before, and the present price is so much in advance over what it was a year or so ago, and with a likelihood of a continued advance, the probabilities are that these woods will get so high, that there will be more oak used again by the furniture factories. The amount has been reduced by the use of gum."

* * *

LOUISVILLE, KY.

A manufacturer of mahogany and veneers writes us from Louisville as follows: "As to the present lumber market and the prospects for the future, would state that based on orders booked by us during the past two weeks, in conjunction with pending inquiries, our opinion is that conditions show a considerable improvement as compared with the corresponding period a year ago, and also as compared with the early part of this year, and the indications, as we see them, are that business will remain active for the next sixty days and even beyond that."

And a correspondent sends this report from Louisville: "The lumber movement during December has been especially gratifying to mill men and dealers of Louisville. Whereas in former years business has slowed up in December on account of the January inventories, there has been no let-up this season, and in fact a great deal of new business is being booked into the new year.

Northern States Markets

CADILLAC, MICH.

A large manufacturer of northern hardwoods and hemlock reports conditions in northern Michigan as follows: "We do not believe that there is anywhere near half the amount of hemlock in pile in northern Michigan that was in stock a year ago at this time and the supply of hardwoods is also reduced by probably about 15 percent.

"Naturally it would be expected that mill stocks would increase a little during November, but our reports show that there was a decrease last month, much to our surprise. Birch is sold up very close in this territory. Basswood is unusually strong and stocks are entirely inadequate to the demand. There is considerable maple wanted and both inch and thicker stocks are exceedingly scarce. We know that maple is being held this week on the basis of $53 for 2-inch delivered in Chicago; inch maple is quoted at $45 delivered in Chicago, and No. 1 common inch at $35. The price of beech lumber is picking up in this section and its uses are widening very materially. Recent quotations are on the basis of $32 for firsts and seconds; $22 for No. 1 common, and $17 for No. 2 common f. o. b. mill. In our opinion beech is rapidly reaching the position to which its merits entitle it. Beech flooring is even now selling close to the price of maple. Soft elm is in the very best of demand and there is no large amount of stock available."

* * *

MINNEAPOLIS, MINN.

A prominent manufacturer of Minnesota writes us as follows: "We have a very firm lumber market at the present time, with all the business we can take care of at this time of year. I can see no reason to believe that conditions will be any different from this at any time during the next six months, and if we have normal crop conditions in the country the coming season I believe the lumber business will be good throughout the year.

"Labor and supply costs are the highest ever known, and as the advances we are receiving will just about take care of the increased cost."

* * *

BAY CITY, MICH.

These ideas on general lumber conditions come to us in a letter from a manufacturer of Michigan: "We believe white pine prices will advance from $1 to $2 a thousand over recent advances and that they will remain firm during 1917, on account of existing conditions.

"Supplies and labor have materially increased, so much so that the manufacturers shall be forced to make a material advance and in addition with the output decreased at least 25 percent over this year's cut, we believe the demand for white pine, hemlock and northern hardwoods will exceed the supply which in itself will make a very firm market.

"We understand western manufacturers will be able to produce their normal supply, but on account of increased cost must advance prices.

"In the south while supplies are higher, we do not believe that labor has materially increased; and as soon as cars are plentiful and should the demand fall off, as it invariably does when they get their prices as high as they are now, it is difficult to determine what yellow pine will do."

In Chicago or adjacent territory in hardwoods. Knowledge of both trade and markets. Twenty years' experience. Address "F. I.," care LUMBER WORLD REVIEW.

SALES MANAGER.

Experienced (over twenty years) sales manager would like to correspond with concern with a view to position as sales manager. Has handled southern pine, white pine, cypress and Pacific coast woods. About 40, married, and will go to any section. Address "MO," care LUMBER WORLD REVIEW.

L. M. LAMM,

208 District National Bank Building, Washington, D. C. In charge of the Washington Bureau of the LUMBER WORLD REVIEW. In close touch with lumber matters at Interstate Commerce Commission. Able to watch for decisions, etc. Prices reasonable.

WANTED—POSITIONS FOR SALESMEN.

Lumber concerns desiring traveling salesmen will do well to correspond with T. H. Nelson, secretary Central Association of Traveling Lumber & Sash & Door Salesmen, State Life Building, Indianapolis, Ind.

BRIEF REPORT OF THE INDUSTRIAL DEPARTMENT OF THE INTERNATIONAL COMMITTEE OF YOUNG MEN'S CHRISTIAN ASSOCIATIONS IN THE SOUTHERN YELLOW PINE TERRITORY, 1915-1916.

New Building: The Crossett Lumber Co. completed its second building for its white logging camp at Duncan's, Ark. It was opened with special exercises in May, at which Messrs. C. R. Towson and J. Lewis Thompson spoke. Every employe is a member.

The Finkbine Lumber Co. opened in July a very attractive building for its employes at D'Lo, Miss., where a model sawmill has been erected. A strong secretary was placed in charge, and a splendid membership has been secured. The company proposes extension of the work to the logging camp and to the negro quarters.

The Eastman-Gardiner Co. opened in July a building for negroes, in its logging camp at Cohay, Miss. An efficient negro secretary is in charge, and a large majority of the employes are paid members.

The Carpenter-O'Brien Lumber Co. and the Burton-Swartz Lumber Co. have authorized a building and the employment of a secretary for their employees at Carbur, Fla., their joint logging operation.

Investigations: Special investigations have been made at nine centers, and proposals, with plans for suggested building adapted to local conditions, submitted relative to organizing branches of the work.

Secretaries Secured: In co-operation with state committees secretaries were secured for Kaulton, Ala., D'Lo, Miss, and Cohay, Miss.

Welfare Conferences: (a) A welfare conference was held at Laurel, Miss., with a strong program and much interest manifested by representatives of the mills in that vicinity. The southern lumber secretaries participated and held a special conference of their own the following day on methods of work. The secretaries doing work for the employes of nine companies attended.

(b) Another successful welfare conference was held at Lake Geneva, Wis., in July, in co-operation with the Railroad Department of the International Committee. It is planned to repeat this conference the coming season.

All who have been present at these welfare conferences on industrial betterment are enthusiastic in their praise, and the department is making plans to continue this line of service.

Summer Training School: The usual two weeks' summer school for secretaries and volunteer workers in lumber and other industrial associations was held at Black Mountain, N. C. Representatives from Laurel, Miss.; Camp Hugh, Ala.; Bonami, La.; Cohay, Miss., and Bogalusa, La., attended. The secretaries and other workers are here brought into contact with men serving in welfare relations with cotton, coal, iron, and other corporations, and their point of view is broadened and their efficiency much strengthened by the interchange of thought and personality. Thirty-one students were enrolled.

Lumbermen's First Aid Manual: The Lumbermen's Safety First—First Aid Manual, prepared last year, has been cordially received, and its use by many companies shows it to be practical and effective. It deserves, however, a much wider use in the industry.

Work for Negroes: The most noticeable new emphasis in welfare work in the lumber industry has been with reference to the negro. The success of the comprehensive program in operation for the negroes of the American Cast Iron Pipe Co., Birmingham, Ala., in the past three years has demonstrated clearly an amazing response on the part of this race to company interest in their living and moral conditions. We can urge a similar program adapted to the special needs of the lumber industry with confidence that investments of this kind will bring back a large economic return. Several influential lumber companies contemplate immediately giving increased welfare facilities to their negro labor.

Office Changes: Norman C. Schlichter, our special representative for the yellow pine territory, has changed his office from Charlotte, N. C., to Chicago, Ill. Dr. E. H. T. Foster, with headquarters in Atlanta, will give special attention to the needs of lumber workers in the east coast territory during the coming year.

Publicity: The lumber press and other papers have opened their columns generously to reports of the work, and the department has brought to its attention many indications of progress in human betterment among the men of the mills and forests. It is evident that the industry benefits beyond estimate from such publicity along welfare lines.

THE BROOKMIRE REPORT.

The Brookmire Economic Service, of 56 Pine street, New York, in its bulletin of December 11, says that as a general problem at the present time, very long range contracts are not justified. However, since there is very little chance of an early break of any large proportions in the commodity market the presupposition is that consumers are justified in covering their requirements for from three to six months in every line. It is not felt that this will give much advantage in prices, although it is felt that the price movement is near to the crest, but such forward orders will afford relief from delays in delivery because of the sold up conditions of factories, or because of the car shortage.

Brookmire believes that there are some commodities in which the rise has gone as far as it can and in which a small degree of reaction may be expected. In considering the specific commodities, however, business men should remember that a large drop in commodity prices during the winter is not expected. A technical reaction such as took place in sugar, cotton, wheat and corn should be utilized for taking on from three to six months' supplies. Regarding the various commodities Brookmire says that in lumber the rallying tendency continues, but prices are still relatively low. This is a well understood condition.

Brookmire's barometer chart shows that the business condition December 11 was at the hazardous point, a condition which was reflected in the stock and grain markets only a few days ago. Banking funds were indicated to be plethoric and the changes in this leg of the barometer should be watched with care. With regard to European values, special attention is given to England, where the highest prices in fifty years are being paid for commodities.

Brookmire says that two years ago banking funds were so depleted abroad that if the war had not broken out there would have been a period of low prices during 1914-15 while the bankers were liquidating loans and increasing their funds. So long as the war continues, however, the foreign bankers will have to place their funds at the disposal of the respective governments and an abnormally high level of commodity prices will be in evidence.

SHORT COURSES IN FORESTRY.

The College of Forestry of the University of Washington at Seattle, announces short practical courses in forestry, logging and lumbering, to be held for twelve weeks during the winter at the University of Washington at Seattle. The course will begin on Wednesday, January 3 and will close on Friday, March 30. It is arranged especially for young men who have not had the advantages of a high school education and who cannot afford to spend a long time at the university. It affords an especially good opportunity for men who are regularly engaged in some form of woods work, or for those who have a desire to enter upon such work as they can secure a practical education within a comparatively brief period. This year the university is increasing the work in its special courses of "Lumber and Its Uses," a course which is laid out with special reference to those who may be engaged in office work at the sawmills, or to lumber salesmen or architects, engineers, builders and building inspectors.

Professor Hugo Winkenwerder, dean of the College of Forestry, states that three distinct lines of work will be given, namely, "Forestry," "Logging" and "Lumber and Its Uses." Additional features for the course will be lectures and demonstrations by experts actively engaged in the industry. So far arrangements have been completed for an address by O. P. M. Goss, of the West Coast Lumbermen's Association, on "Special Problems in the Uses of Timber;" by C. W. Zimmerman, of the United States Forest Service, on "Timber Testing;" by H. B. Oakleaf, chief of products, Forest Service District No. 6, on "Sawmill Problems;" by Clyde Martin, logging engineer of the Cherry Valley Logging Co., on "Logging Engineering;" by T. T. Munger, of the Forest Service, on "Timber Sales and Reconnaissance."

LAUNCHING OF THE SEABORN AT TACOMA.

Tacoma, Wash., Dec. 12.—The new auxiliary schooner Seaborn, the first vessel built at the Seaborn shipyards of Tacoma, was launched here today before a large crowd. It is the first ship to come from the builders' hands of the many which will be constructed at various new yards in this city during the coming year.

The Seaborn is 242 feet long, 43 feet beam and has a capacity of 1,500,000 feet of lumber. She is fitted with auxiliary engines. Miss Catherine Ostrander, daughter of Harry D. Ostrander of the Seaborn company, broke the traditional bottle of champagne over the bows of the vessel as the latter started to move down the ways.

The ship's momentum down the ways carried her across the city waterway and she collided with the Eureka dock on the opposite shore. The vessel was undamaged, though the dock suffered some in the collision.

The Seaborn will be rigged at the Tacoma yards and will go into commission early in February. The Seaborn company has contracts for five other vessels, one of which is partly completed.

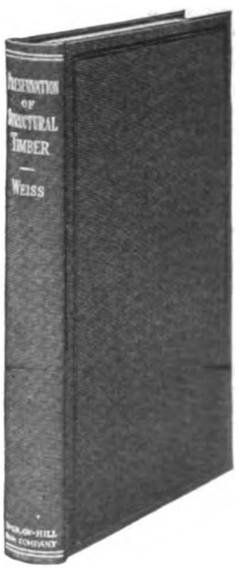
THE PRESERVATION OF STRUCTURAL TIMBER

By HOWARD F. WEISS, Director, Forest Products Laboratory, U. S. Forest Service; Honorary Member, American Wood Preservers' Association.

312 pages, 6x9, fully illustrated, $3.00 (12/6) net, postpaid.



In all the extensive literature of the wood preservation industry, this is the first book to cover systematically the subject in its broad aspect. It gives a complete survey of the entire industry.

Mr. Weiss, as Director of the Forest Products Laboratory, U. S. Forest Service, has had at his command the very best of material. This material, together with data obtained during his years of personal contact with the development of the industry, form the nucleus of this book.

Be Sure to Get an Expert When Changing to Electric Power

Skill is required for the proper application of electric power in your saw and planing mills. You would not think of buying saw mill machinery without careful study of local conditions by experts. Then don't have old line steam men lay out your electric drive.

Instances are known where the splendid economies of electric power were used up to pay interest of heavy investments in copper cables which were unnecessary. For this and similar reasons mill builders, not having time to investigate underlying causes, have thought electric power uneconomical.

Some mill builders have called in our engineer specialists to help apply electric power correctly. This service was extended, without obligation to the mill builder, in the hope that the use of electric power might be extended. You are invited to avail yourself of this service.

A New Book

LOGGING

The Principles and General Methods of Operation in the United States

By Ralph Clement Bryant, F.E., M.A., Manufacturers' Association Professor of Lumbering, Yale University.

8vo, xviii 590 pages, 133 figures.

Cloth, $3.50 Net

The information which is contained in this book can be applied by the lumberman in his daily work.

The chief facilities and methods for the movement of timber from the stump to the manufacturing plant, especially logging railroads, are discussed at length.

Greatest emphasis has been laid on features about which there is not much written material available.

Combine business meetings and outings....July 25 30
May, R. R. elected secretary....Sept. 10 32

Lumber Press Club:
Award diplomas to the "Colonels of Preparedness"....July 10 37
Entertain School of Salesmanshin....July 10 36

Memphis Lumbermen's Club:
Announcement of candidates for annual election....Dec. 10 35
Annual election....Dec. 25 31
Hear address on foreign trade by Erwin W. Thompson....Nov. 25 36
Semi-monthly meeting—report....Oct. 25 31

Michigan Hardwood Manufacturers' Association:
Committee on grades meets with committee of Northern Hemlock and Hardwood Manufacturers' Association....Sept. 25 36
Committee on grades—report....Nov. 10 99
Discussion of grades and grading rules—excerpts from speeches....Aug. 10 44
Fall meeting—report....Nov. 10 99
Program for annual meeting....July 25 30
Tenth annual meeting—report....Aug. 10 43

Montana Larch & Pine Manufacturers' Association:
Disbanded....Sept. 10 27
Shipments for June—report....Aug. 10 47
Shipments for first 6 months of 1916....Sept. 10 27

Montana Lumber Manufacturers' Association:
Organization....Sept. 10 27

Montana Retail Lumbermen's Association:
Sixth annual meeting—report....Aug. 25 33

Nashville Lumbermen's Club:
Adjourns for summer....July 25 30

National Association of Box Manufacturers:
Seventh semi-annual meeting—report..Sept. 10 27

National Commissary Managers' Association:
Announcement of annual meeting....July 25 53

National Drainage Congress:
Work will prevail—Ed....Sept. 25 20

National Hardwood Lumber Association:
Complete report of annual meeting issued....Aug. 10 37
Consumers' Register No. 5 issued....Dec. 10 39
Inspection for May—report....July 10 29
Inspection for June—report....July 25 53
Inspection for August—report....Sept. 25 31
Inspection for November—report....Dec. 25 35
October meeting of executive committee—report....Nov. 25 34
Official hand book Vol. XXIV issued....Oct. 25 32
Personnel of inspection rules committee....Sept. 25 27
Recommend independent inspection rules for cypress....Dec. 25 35

National Lumber Manufacturers' Association:
Accomplishments of the Association described by Pres. Downman....Nov. 25 19
Adopt slogan "There's a Wood for Every Need"....Oct. 10 33
Annual business meeting—report....July 25 42
Appreciation, An—by R. H. Downman..Dec. 10 27
Directors elected to fill vacancies....July 10 29
Executive committee meeting—report..Oct. 10 40
Figures on comparative values in lumber in 1915 and 1916....Sept. 10 33
Granted hearing before Newlands Railroad Investigation Committee..Nov. 25 40
Growing demand for wood block paving—reported....Oct. 10 52
Issues bulletin on heavy timber mill construction....July 10 29
Pamphlet on erection of swine houses issued....Dec. 10 36
Personnel of executive committee....July 10 40
President Downman and other prominent lumbermen go to visit western lumbermen and plants....Nov. 10 98 106
Production for 1916, first eight months....Oct. 25 33
Publish bulletin on poultry house construction....Sept. 25 31
Report by special committee on the passage of the General Revenue and Income Tax Bill H. R. 16763..Nov. 10 55

Montana Larch & Pine Manufacturers' Association:
Disbanded....Sept. 10 27
Shipments for June—report....Aug. 10 47
Shipments for first 6 months of 1916....Sept. 10 27

Montana Lumber Manufacturers' Association:
Organization....Sept. 10 27

Montana Retail Lumbermen's Association:
Sixth annual meeting—report....Aug. 25 33

Nashville Lumbermen's Club:
Adjourns for summer....July 25 30

National Association of Box Manufacturers:
Seventh semi-annual meeting—report..Sept. 10 27

National Commissary Managers' Association:
Announcement of annual meeting....July 25 53

National Drainage Congress:
Work will prevail—Ed. ....Sept. 25 20

National Hardwood Lumber Association:
Complete report of annual meeting issued....Aug. 10 37
Consumers' Register No. 5 issued....Dec. 10 39
Inspection for May—report....July 10 29
Inspection for June—report....July 25 53
Inspection for August—report....Sept. 25 31
Inspection for November—report....Dec. 25 35
October meeting of executive committee—report....Nov. 25 34
Official hand book Vol. XXIV issued....Oct. 25 32
Personnel of inspection rules committee....Sept. 25 27
Recommend independent inspection rules for cypress....Dec. 25 35

National Lumber Manufacturers' Association:
Accomplishments of the Association described by Pres. Downman....Nov. 25 19
Adopt slogan "There's a Wood for Every Need"....Oct. 10 33
Annual business meeting—report....July 25 42
Appreciation, An—by R. H. Downman..Dec. 10 27
Directors elected to fill vacancies....July 10 29
Executive committee meeting—report..Oct. 10 40
Figures on comparative values in lumber in 1915 and 1916....Sept. 10 33
Granted hearing before Newlands Railroad Investigation Committee..Nov. 25 40
Growing demand for wood block paving—reported....Oct. 10 52
Issues bulletin on heavy timber mill construction....July 10 29
Pamphlet on erection of swine houses issued....Dec. 10 36
Personnel of executive committee....July 10 40
President Downman and other prominent lumbermen go to visit western lumbermen and plants....Nov. 10 98 106
Production for 1916, first eight months....Oct. 25 33
Publish bulletin on poultry house construction....Sept. 25 31
Report by special committee on the passage of the General Revenue and Income Tax Bill H. R. 16763..Nov. 10 55
Secretary Kellogg announces campaign for fire protection for farm buildings....Sept. 25 32
Teachers Cottages—booklet issued by department of trade extension....July 10 56
Work for creosoted wood block paving....Sept. 10 26
Retail sales development service added to "Extension Department"....Dec. 25 31
Retail service in model farm buildings....Dec. 25 30

National Retail Lumber Dealers' Association:
Constitution and by-laws—text....Sept. 25 30
Organization....Sept. 10 34

National Wholesale Lumber Dealers' Association:
Organizing an inter-insurance department....Nov. 25 33
Protest to I. C. C. against increase in demurrage rates....Nov. 25 39

Nebraska Lumber Dealers' Association:
Announcement of annual meeting....Nov. 10 96

New York Lumber Trade Association:
Thirtieth anniversary celebration....Dec. 25 31

North Carolina Pine Association:
June meeting—report....July 10 27
October meeting—report....July 10 27

Northern Hemlock & Hardwood Manufacturers' Association:
Announcement of semi-annual meeting....July 25 51
Cabinet for lumber samples contrived..Sept. 25 32
Committee on grades meets with committee of Michigan Hardwood Manufacturers' Association....Sept. 25 36
Committee on grades—report....Nov. 10 100
Discussion of grades and grading rules—excerpts from speeches....Aug. 10 42
Exhibit at Minnesota State Fair—described....Sept. 25 34
Fall meeting—report....Nov. 10 100
Hemlock advertising campaign—Ed....July 10 20
Midsummer meeting—report....Aug. 10 40
Program for salesmanship conference....Nov. 25 36
Salesmanship conference—telegraphic report....Dec. 10 40
Salesmanship conference—report....Dec. 25 29

Northern Pine Manufacturers' Association:
Exhibits at Minnesota State Fair....Sept. 25 35
Production and movement for May....July 10 27
Production and movement for July....Sept. 10 32
Semi-annual meeting—report....Aug. 10 45
Shipments for 6 months—report....Aug. 10 37

Northern White Cedar Association:
Announcement of annual meeting....Dec. 10 34

Northwestern Hardwood Lumbermen's Association:
Twenty-ninth annual meeting—report....Dec. 10 36

Pacific Logging Congress:
Announcement of plans for annual meeting and Forest Industries Weel....July 25 30
Announcement of "Welfare Dinner" program....Sept. 25 27
Annual meeting—Editorial comment....Nov. 10 61
Eight annual meeting—report....Nov. 10 71
Excursion to Hoquiam—account....Nov. 10 82
First Aid demonstrated....Nov. 10 85
President Peed's annual address....Nov. 10 71
Program for annual meeting....Oct. 25 31
Resolutions passed at annual meeting..Nov. 10 78
Secretary Cornwall's annual report....Nov. 10 72
Welfare dinner—report....Nov. 10 77
Work planned for Forest Industry Conference....Aug. 10 29

St. Louis Lumbermen's Exchange:
Annual election—report of meeting....Dec. 25 35

Southern California Retail Lumber Dealers' Association:
Sixth annual meeting—report....Nov. 25 34

Southern Commercial Congress:
Program for annual meeting announced....Oct. 10 33

Southern Cypress Manufacturers' Association:
Booklet on pecky cypress issued....Oct. 25 34
Call for semi-annual meeting....Oct. 25 30
Elects Wm. H. Green assistant secretary....Nov. 10 98
Exhibit at Vegetable Growers' Association of America....Oct. 10 43
Semi-annual meeting—report....Nov. 10 97

Southern Forestry Congress:
Announcement and program....July 10 41
Program and report of meeting....July 25 34
Text of resolutions adopted....Aug. 10 37

Southern Hardwood Traffic Association:
Appeal to Interstate Commerce Commission to relieve car shortage situation....Oct. 25 31

Plan of organization of Forest Products Federation:
Chart No. 1.....Nov. 10 50
Chart No. 2.....Nov. 10 51
Ragley, W. G., Lumber Co.'s plant:
Electical tractor at work.....Aug. 10 26
Electrical truck loaded.....Aug. 10 26
Forest scenes near Ragley.....Aug. 10 27
Lumber, showing methods of piling....Aug. 10 26
Panorama showing mills, yards and tracks.....Aug. 10 24
Rough lumber shed.....Aug. 10 25
Tie ramp showing method.....Aug. 10 24
Trade-mark of W. G. Ragley Lbr. Co..Aug. 10 24
View of sawmill.....Aug. 10 24
Realm of the Retailer:
Bungalow to cost $2,500—plan.....Sept. 10 25
Bungalow of five rooms.....Sept. 25 23
Plan of $3,500 house.....Nov. 25 22
Six room house plan.....Oct. 10 30
Seven room house and plans.....Dec. 25 26
Redwood bungalow in Australia:
Exterior views (2).....Dec. 10 25
Interior views (3).....Dec. 10 25
Removable truck safety-first switch board.....Oct. 10 40
Rib Lake Lumber Co.'s new mill, Rib Lake, Wis.....Oct. 10 36
Rite-Grade shingles:
Fire test—3 stages shown.....Aug. 10 28
School of Preparedness—diploma.....July 10 37
Shepard's, Eugene S., country home, Rhinelander, Wis.....Oct. 10 37
Simonds Manufacturing Co.'s new saw tool.....Nov. 25 50
Skidding Machinery:
Automatic slack puller—detail of plan.Nov. 10 57
First portable logger.....Nov. 10 57
First steam skidder.....Nov. 10 56
New method of attaching logs, using multiple skidding lines.....Nov. 10 58
Pull boats handling Louisiana cypress..Nov. 10 57
Snoqualmie Falls, Wash.....Sept. 10 24
Snoqualmie Falls Lumber Co.:
Stump piles and clearing.....Sept. 10 24
View of mill site.....Sept. 10 24
Southern Pine Association:
Exhibit at Atlantic City.....July 10 40
Southern Pine Association's Exhibit at "The Reconstructed City," Paris:
General view of model farm.....July 25 51
Lumber exhibits.....July 25 51
Stange A. H., Co.'s office car, Merrill, Wis.....Oct. 10 35
Stephenson, I., Co.'s plant, Wells, Mich..Oct. 10 36
Train load of 40 cars' shipment of Idaho white pine.....Nov. 25 38
Von Platen Lumber Co.:
New office.....Oct. 10 36
Piling truck.....Oct. 10 36
Sawmill at Iron Mountain, Mich.....Oct. 10 36
"Waster," Gray's Harbor Lumber Co.'s mill, at Aberdeen, Wash.....Dec. 10 29
White Pine Bureau—Exhibit of model houses at Minnesota State Fair....Sept. 25 35
White pine tree, 3 years old.....Oct. 10 36
Yates, P. B., Machine Co.:
New horizontal resaw.....July 25 66
New plant at Beloit, Wis.....Sept. 10 32

Immediate Necessity for Curtailing Lumber Production, An—Series by B. A. Johnson:
Part I.....July 10 21
Part II.....July 25 21
Part III.....Aug. 10 30
Part IV.....Aug. 25 21
Imports:
Character of imports during 1916—report by Bureau of Foreign and Domestic Commerce.....Dec. 25 32
Government report for October.....Dec. 10 41
Insurance:
Increase in rates protected by California lumbermen.....Nov. 25 39
Inter-insurance criticised by daily papers.....July 25 39
Inter-insurance to be undertaken by National Wholesale Lumber Dealers' Assn.....Nov. 25 33
On standard mill construction buildings.....Aug. 25 29
Protest against rise in rates made by Texas lumbermen.....July 10 29
Industrial changes in Europe.....Oct. 25 24
International Co-operation—address by H. R. MacMillan.....Nov. 10 47
Interstate Commerce Commission:
Amended car service rules adopted by American Railway Association filed with commission.....Nov. 25 37
Commissioner Meyer on the purpose of the "Reclassification Hearing" in Chicago.....July 25 48
Digest and report of the hearing in Reclassification Case held in Chicago.....July 25 37
General classification case, scope of hearings outlined in statement by commission.....July 10 42
Great freight rate hearing—Ed.....July 10 40
Hearing on car shortage at Louisville—report.....Nov. 10 106
Hearings, news, etc., since June 25.....July 10 42
Hearings, decisions, etc., since July 10..July 25 52
Hearings, decisions, etc., since July 25..Aug. 10 50
Hearings, complaints, etc., since Aug. 10.....Aug. 25 41
Hearings, applications, etc., since Aug. 25.....Sept. 10 36
Hearings, applications, etc., since Sept. 10.....Sept. 25 37
Hearings, orders, etc., since Sept. 25..Oct. 10 42
Hearings, decisions, etc., since Oct. '10.....Oct. 25 36
Hearings, opinions, etc., since Oct. 25..Nov. 10 107
Hearings, opinions, etc., since Nov. 10..Nov. 25 41
Hearings, decisions, etc., since Dec. 10.Dec. 25 36
Issue order to carriers to file new demurrage schedule.....Dec. 10 41
Investigation of car supply.....Oct. 25 36
Proposal that Commission investigate wage conditions in railroad and allied industries.....Aug. 10 64
Rate conference at Chicago—the results—Ed.....July 25 20
Scope of hearings in the general classification case outlined.....July 10 42

K

Kiln-Drying:
Method of drying under superheated steam described by H. D. Tiemann.....Aug. 10 23
Prevention of casehardening.....July 10 24
Removal of casehardening.....July 10 25

L

Labor—Scare in southern saw mill districts.....Aug. 10 46
Laborers going from Canadian woods to England for logging.....Sept. 25 29
Logging Manager, The—His Requisites and Responsibilities, paper by John Raine.....Nov. 10 89—Dec. 10 23
Logs—Logging:
Comparative costs desirable.....Nov. 10 88
Co-operation of employer and employe.....Nov. 10 80
Diesel engine in operation.....Nov. 10 76
Electrical devices.....Nov. 10 88
Electricity vs. steam in operation.....Nov. 10 76
Electricity applied to camps.....Nov. 10 78
Engineering—how taught.....Nov. 10 81
Feeding of men in camp.....Nov. 10 89
Felling and bucking methods.....Nov. 10 73 74
Flumes—use in transportation.....Nov. 10 81
Geological value of information.....Nov. 10 75
High lead yarding methods.....Nov. 10 74 75
Improved methods.....Dec. 10 23
Improvements in locomotives for logging.....Nov. 10 92
Improvements in wire rope for logging Nov. 10 92
Locomotive crane in operation.....Nov. 10 76
Methods of utilizing logged off lands..Nov. 10 117
Railroad construction.....Nov. 10 86
Recent improvements in logging machinery.....Nov. 10 91
Safety orders and requirements.....Nov. 10 79
Sanitation in logging camps.....Nov. 10 98
Loyalty in the Evolution of Selling—address by Edward Hines.....July 25 31
Lumber-men-ing:
Automobile demand for lumber increasing.....Aug. 10 47
Automobile demands in wood.....Sept. 25 50
Australian commission to study American lumber conditions.....Oct. 25 35
Boards for packing cases admitted to Great Britain.....Dec. 25 36
Car shortage affecting supply.....Aug. 25 35
Car building demand heavy.....Aug. 10 48
Co-operation with architects and builders an advantage.....July 10 31
Curtailing of production—discussion by B. A. Johnson.....July 10 21
Curtailment of production urgent.....July 25 21
Curtailment—extent and effects.....Aug. 10 30
Demand and trade possibilities in Europe.....Sept. 10 26
Department store "yards" in New York and Philadelphia.....Sept. 10 26
Effects of curtailing production.....Aug. 25 21
Efforts in behalf of Webb bill.....Sept. 10 29
Exhibits of lumber at Atlantic City railroad men's meetings.....July 10 40
Exhibit of cypress at Vegetable Growers' Association of America....Oct. 10 43
Exhibits at National Complete Building Exposition, New York.....Nov. 10 95
Experts to study European markets to be sent by federal government..Aug. 10 50
Exports—government reports.....Sept. 10 29
Furniture trades demand for hardwoods increasing.....Aug. 10 47

General conditions for October reported by Federal Reserve Board..Oct. 10 42
Hardwood interests confer with Federal Trade Commission .....Nov. 10 105
How shall be trade-marked—Ed.....Aug. 10 22
Imports and exports for April—summary made by Department of Commerce .....July 10 39
Information about Lumber—a "gem"..Oct. 25 37
Inspection a national interest—Ed....July 25 20
Inspectors wanted by federal government .....Oct. 10 42
"Joiners" in the lumber trade.....Aug. 10 35
Largest shipment of white pine ever made .....Nov. 25 38
Louisville lumbermen aid in securing new industries .....July 25 33
Lumbermen of California and Inland Empire considering joint organization .....July 10 27
Markets in northern South America....Aug. 10 64
Market reported by Federal Reserve Board bulletin .....Nov. 10 107
National trade mark proposed.....Aug. 10 50
Negative activities .....Aug. 10 35
Organize to advertise and sell cut-over lands in the south.....Dec. 10 36
Organize to capture foreign trade.....Oct. 25 36
Pittsburgh lumbermen in outing.....July 10 29
Present evidence in hearing on car shortage before Interstate Commerce Commission .....Nov. 10 105
Prices discussed by R. H. Downman....Dec. 10 26
Prices low by comparison with other products—figures by M. B. Nelson Dec. 25 33
Products for 1914—statistics published by government .....Oct. 10 40
Production for 1916—figures of National Lumber Manufacturers' Assn. .....Oct. 25 33
Production and shipment, reported by Montana Larch and Pine Manufacturers' Assn. for 1916.....Sept. 10 27
Production and movement for May reported by Northern Pine Manufacturers' Assn.....July 10 27
Production and movement for July reported by Northern Pine Manufacturers' Assn. .....Sept. 10 32
Prodution and shipment reported by Southern Pine Assn.....July 10 31
Prodution and shipment reported by Southern Pine Assn.....Aug. 10 31
Production and shipment reported by Southern Pine Assn.....Sept. 10 27
Production and shipment reported by Southern Pine Assn.....Sept. 25 26
Production and shipment reported by Southern Pine Assn.....Oct. 10 32
Production and shipment reported by Southern Pine Assn.....Oct. 25 30
Production and shipment reported by Southern Pine Assn.....Nov. 10 59
Production and shipment reported by Southern Pine Assn.....Nov. 25 21
Production and shipment reported by Southern Pine Assn.....Dec. 10 36
Production and shipment reported by West Coast Lumbermen's Assn.....July 10 29
Production and shipment reported by West Coast Lumbermen's Assn.....Aug. 10 31
Production and shipment reported by West Coast Lumbermen's Assn....Sept. 10 27
Production and shipment reported by West Coast Lumbermen's Assn....Sept. 25 26
Production and shipment reported by West Coast Lumbermen's Assn.....Oct. 10 32
Production and shipments reported by West Coast Lumbermen's Assn.....Oct. 25 30
Production and shipments reported by West Coast Lumbermen's Assn....Nov. 10 59
Production and shipments reported by West Coast Lumbermen's Assn....Nov. 25 21
Production and movement reported by West Coast Lumbermen's Assn.Dec. 25 31
Production and shipments for July reported by Western Pine Manufacturers' Assn.....Sept. 25 29
Protest trade-marking lumber by Shingle Weavers' Union.....Oct. 10 21
Report of federal investigation nearing completion .....Aug. 10 51
Salesmanship methods of the future....Dec. 10 22
Seek relief from car shortage situation from Interstate Commerce Commission .....Oct. 25 31
Shipments of larch and pine for June reported by Montana Larch and Pine Mfrs.'s Assn.....Aug. 10 47
Texas lumbermen protest rise in insurance rates .....July 10 29
Values in 1916 compared with values in 1915 .....Sept. 10 33
West Coast products in eastern markets .....July 25 50
Lumber Salesmanship—address by Edward Hines .....July 10 33
Lumber salesmanship and salesmen, discussed by many lumbermen....July 10 30 36
Lumber World Review:
Statement of ownership, management, etc. .....Oct. 25 50

M

Machinery:
Coleman Feed Roller—Description.....Nov. 10 104
Dalton adding machine—described.....Aug. 25 34
Development of skidding machinery....Nov. 10 56
Diesel engine—described.....Nov. 10 76
Gasoline tractor—described.....Aug. 10 38
Log loading machinery improvements..Nov. 10 56
McDonough branding machine approved by lumbermen .....Oct. 10 34
Recent improvements in saws.....Dec. 25 24
Safety First truck type switch board—described .....Oct. 10 40
Simonds Mfg. Co.'s new saw tool—described .....Nov. 25 50
Skidding machinery—recent improvements .....Nov. 10 91
Type H61 Horizontal Resaw of P. B. Yates Machine Co. described.....July 25 67
Main Line Logging Roads and Extensions, paper by S. M. Adams.....Dec. 25 24
Markets:
Car Shortage, Effects—Ed.....Aug. 10 22
Car Shortage seriously affecting the lumber market .....Oct. 10 39
Conditions in the yellow pine market discussed by Chas. S. Keith.....July 10 34
Lumber market as reported by Federal Reserve Board bulletin.....Nov. 10 107
Lumbermen organize to capture foreign markets.....Oct. 25 36
Lumber market for October reported by Federal Reserve Board.....Oct. 10 42
Mahogany situation affecting the market for walnut and gum.....Aug. 10 64
Report on European conditions by W. J. Drewry .....Sept. 25 29
South American markets for lumber—described by R. E. Simmons.....Aug. 10 64
Strike, effect—Ed. .....Aug. 10 22
Meaning of the Portland Meeting by E. T. Allen.....Nov. 10 43
Millwork—trade reviewed in each issue.

N

NATIONAL QUESTIONS.

Appropriations made by Congress for forestry .....Sept. 25 37
Appropriation made for experiments in use of wood in paper making.....July 25 52
British "black-list"—of diplomatic importance—Ed. .....July 25 29
Bureau of Foreign and Domestic Commerce:
Annual report .....Dec. 25 32
Announcement of examinations for European lumber investigators.....Sept. 10 31 Nov. 10 107
Examinations for trade commissioners held .....Nov. 25 37
Federal Trade Commission and Forest Service confer with lumber exporters on trade extension.....Aug. 25 38
Oral examinations for trade commissioners .....Oct. 25 36 Dec. 25 36
Publishes statistics on exports for August .....Oct. 10 34
Review of work to encourage export trade in lumber.....Sept. 10 29
Send questionaire on export methods to lumbermen and others.....Oct. 25 31
Chief Forester's annual report.....Dec. 10 39
Department of Commerce publishes statistics of lumber manufacture for 1914 .....Oct. 10 40
Report on lumber imports and exports for April.....July 10 38
Federal Farm Loan Board organization and personnel .....Aug. 25 41
Federal Reserve Board Bulletin for October reports lumber conditions.....Oct. 10 42
Federal Trade Commission's annual report—relative to lumber industry Dec. 10 37
Federal Trade Commission's report on export conditions—issued .....Dec. 10 41
Government report of imports and exports for October.....Dec. 10 41
Legislation:
Adamson Eight Hour Law Explained by Judge Adamson.....Nov. 25 38
Changes in revenue bill of benefit to timber owners .....July 25 49
Changes relative to timber taxation made in revenue bill.....Aug. 25 41
Joint congressional committee on interstate and foreign commerce begins hearings .....Nov. 10 96
Joint Congressional Railroad Investigating Committee asks extension of time for inquiry.....Dec. 25 36
National trade-mark proposed to protect American manufacturers.....Aug. 10 50
Plans for final session of 64th congress .....Nov. 25 39
Pomerene bill of lading law passed in senate .....Aug. 10 64
Pomerene bill becomes law.....Sept. 10 36
President Wilson's letter favoring the Webb bill .....Sept. 10 30
Provision for tariff commission made in new revenue bill.....July 25 52
Rural credits bill becomes law.....July 25 52
Webb bill—explained .....Sept. 10 29
Webb bill almost certain of passage Nov. 25 40
Webb bill passage recommended by President Wilson.....Dec. 10 41
Report of exports and imports for year ending June 30, published by the Department of Commerce and Labor .....July 25 52
Report of lumber industry by Forest Service, Federal Trade Commission and Bureau of Foreign and Domestic Commerce completed.....Aug. 25 27
Resolution introduced in Congress to have wage conditions on railroads investigated by Interstate Commerce Commission.....Aug. 10 64
